Dr. Cornelius Riese, Chief Executive Officer

---

Dear Shareholders,

In 2024, we were faced with many challenges, but we have been able to overcome them together. The DZ BANK Group reported a profit before taxes of €3.3 billion, exceeding the high level achieved in the previous year (2023: €3.2 billion).

This result is largely due to our closely coordinated market approach with the cooperative banks and to our very good customer business in the group companies. This enabled us to continue our growth path. The positive development on the capital markets gave us additional momentum.

However, the German economy faced challenges on many fronts in 2024. Persistently high energy costs, weak demand and fiercer competition weighed heavily on companies. Moreover, consumer spending was subdued and there was little inclination to invest, reflecting the significant general uncertainty for both businesses and consumers. Consequently, GDP shrank by 0.2 percent year on year. The poor performance of the economy is now resulting in rising numbers of company insolvencies.

Amid this instability, the results of the DZ BANK Group underline the robustness of a diversified business model. The buoyant equity markets contributed to the very good results achieved by both R+V Versicherung and Union Investment. R+V Versicherung registered rising premiums and, as a result of the market development, a high net gain under gains and losses on investments held by insurance companies. Union Investment also continued the volume growth seen in previous years.

Most areas of the DZ BANK Group's banking business performed very well. Given the high degree of uncertainty that prevailed, DZ BANK – central institution and corporate bank was very much in demand as a

dependable partner to small and medium-sized enterprises and major corporate customers alike. It recorded increasing demand, not only for loans but also for interest-rate hedging and currency hedging. Sales of money market products were also strong. In the Capital Markets business line, business with institutional customers was characterized by brisk issuance activity. The bank looked after a number of highly relevant client accounts with supranational institutions, some of them in the ESG segment. The Transaction Banking business line also registered growth, particularly for depositary business and credit card transactions. DZ HYP also delivered a good business performance against the backdrop of a slowly recovering real estate market. DZ PRIVATBANK's customer business went from strength to strength, including further expansion of private banking in collaboration with the cooperative banks.

The weak economic situation and the resulting elevated level of credit risk had an impact on some of the institutions in the DZ BANK Group. Both TeamBank and VR Smart Finanz, for example, had to recognize increased loss allowances, leading them to report a fall in profit before taxes. The central institution and corporate bank also needed to increase its loss allowances. Profit before taxes was further depressed by negative effects under IFRS arising from the valuation of own issues.

The key results in detail:

The DZ BANK Group's **net interest income** rose to €4.67 billion (2023: €4.33 billion). This was partly thanks to healthy customer business, primarily at the central institution and corporate bank. Furthermore, there were positive accounting-related effects on net interest income, with a countervailing negative impact on gains and losses on trading activities. **Net fee and commission income** amounted to €3.19 billion, which was also significantly higher than the prior-year level (2023: €2.81 billion). This was primarily due to robust inflows into fund products at Union Investment. Despite good operating trading business, **gains and losses on trading activities** deteriorated to a net loss of €842 million (2023: net loss of €175 million). This can be explained by negative impacts from the valuation of the central institution and corporate bank's own issues, as well as by negative accounting-related effects with a countervailing positive impact on net interest income. **Gains and losses on investments** improved to a net gain of €65 million (2023: net loss of €72 million). The net gain under **other gains and losses on valuation of financial instruments** declined to €229 million in 2024, whereas the prior-year figure had been influenced by more favorable valuation effects (2023: net gain of €298 million). Rising premiums and a high net gain under gains and losses on investments held by insurance companies contributed to an increase in the **net income from insurance business** to €1.15 billion (2023: €891 million). **Loss allowances** came to €845 million (2023: €362 million). The economic situation and the resulting credit risks meant that higher additions were required in the central institution and corporate bank and at TeamBank and VR Smart Finanz. **Administrative expenses** fell slightly to €4.55 billion (2023: €4.60 billion), primarily due to the absence of the bank levy. By contrast, there was a moderate increase in staff expenses.

The DZ BANK Group's capital adequacy remains very robust, with a common equity Tier 1 capital ratio of 15.8 percent (December 31, 2023: 15.5 percent).

This encouraging business performance reflects the hard work and dedication of the employees in the DZ BANK Group. On behalf of the entire Board of Managing Directors, I would like to express our sincere gratitude to them.

Given this positive performance, we would like our shareholders to benefit from the DZ BANK Group's success. In keeping with the principles of responsible capital management, we will once again propose a dividend of 25 cents per share to the Annual General Meeting.

The first few weeks of the new year have seen continued brisk demand in our main business lines. That gives us confidence in the face of rather subdued economic forecasts. Our economists expect that economic output will be stagnant at best in 2025. The year ahead is characterized by many imponderables, especially with regard to geopolitical influences and ongoing trade disputes. Therefore it must be hoped that a new German

government will be formed quickly, and that it will immediately set to work on implementing urgently needed structural reforms in order to secure our country's growth, prosperity, security, and infrastructure. In particular, the improvement of the competitiveness of the German economy, not least by dismantling bureaucratic barriers, must not be delayed any further. Germany still has strong foundations, whether in terms of fundamental research or the training of skilled workers, thereby providing a solid basis on which society and the economy can build.

In this environment, we anticipate that our profit before taxes in 2025 will be in the range of €2.5 billion to €3.0 billion.

As we tackle the tasks that lie before us, we should be guided by our firm belief and confidence in our ability to shape our own future. Over the last few years, the DZ BANK Group has overcome a number of significant challenges. The years following the financial crisis were dominated by the strategic realignment of the DZ BANK Group's business model and by an increase in its internal stability. This was followed by the landmark merger with WGZ BANK and its integration. In recent years, we have been able to position DZ BANK – central institution and corporate bank as an independent unit that adds relevant value.

In the years ahead, we will need to ensure that we play a key role in defining the main industry trends. As part of the consolidation of payments processing, for example, we recently took a long-term equity investment in international service provider Wallee through VR Payment. We were also able to increase our market share in the depository business through acquisitions.

With regard to digitalization, we are investing in our infrastructure. In 2024, two multi-year transformation projects with nine-digit budgets were brought to a successful close, namely the creation of an integrated payments processing platform at DZ BANK and the migration of Bausparkasse Schwäbisch Hall's home finance system. At the same time, we are forging ahead with the development and deployment of innovative technologies, such as generative artificial intelligence, in all group companies. In terms of products, our pilot project for cryptocurrencies in the Retail Banking business line has made a very promising start.

It is important to the Cooperative Financial Network that DZ BANK demonstrates strong international credentials in its Corporates and Capital Markets business segment. Here too, we are continuing to invest in new customer relationships, systems, and offices, for example in Vietnam.

We are also keeping our eye on our long-term objectives, for example to support our customers with their transformation. There will be an even greater necessity to mobilize private capital going forward, especially in the capital markets. We consider ourselves to be well positioned in this regard, thanks to our expertise in the sustainability sphere. This year, DZ BANK was selected as one of just a few banks to contribute to the updating of the German government's green bond framework. We are also actively promoting energy efficiency among retail customers. To this end, Bausparkasse Schwäbisch Hall has trained two-thirds of its advisors as certified modernization experts so that they can provide optimum support to homeowners.

In all of these areas and beyond, our unwavering ambition is to contribute to the further development of the Cooperative Financial Network and thereby help to shape the future success of our business.

Kind regards,

Dr. Cornelius Riese  
Chief Executive Officer

# I DZ BANK Group fundamentals

## 1 Business model and strategic focus

(The following chapter contains disclosures relating to ESRS disclosure requirement ESRS 2 SBM-1 paragraphs 40 a) i, ii and 42 a) b).)

The DZ BANK Group focuses its strategy on the local cooperative banks. In doing so, it pursues the objective of consolidating the positioning of the Cooperative Financial Network over the long term as one of the leading financial services providers in Germany. The DZ BANK Group supports the cooperative banks by providing an extensive range of financial products and services in the Retail Banking, Corporate Banking, Capital Markets, and Transaction Banking business lines. This partnership is built on the principles of subsidiarity, decentralization, and regional market responsibility. Strategic initiatives and programs are developed and implemented at the following three levels in the DZ BANK Group: firstly, at the level of the Cooperative Financial Network, with the leading role taken by the Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e. V., Berlin, (BVR) [National Association of German Cooperative Banks]; secondly, at the level of the DZ BANK Group; and thirdly, at the level of the individual entities in the DZ BANK Group, which may draw up their own specific strategic programs.

As regards overarching strategic projects and initiatives for the entire Cooperative Financial Network, the entities in the DZ BANK Group work in partnership with the cooperative banks, Atruvia AG, Frankfurt am Main, (Atruvia), and the BVR on the action areas in the strategic agenda and in the Germany-wide strategic portfolio. This portfolio builds on the strategic agenda and systematically brings together the Cooperative Financial Network's strategic initiatives.

The DZ BANK Group considers itself to be well prepared for future challenges. It intends to continually improve its performance by pursuing selective growth in certain international markets, expanding its product range (e.g. in relation to cryptoassets), and optimizing collaboration between front-office and middle-office divisions. The entities have jointly identified – and together will press ahead with – material areas of potential for collaboration in order to reinforce their shared future viability and profitability. In 2024, generative artificial intelligence (AI) was added as a further area of potential, while activities relating to open finance / financial data access (FIDA) and merchant customers / payment to loan were stepped up. DZ BANK is also concentrating on the big issues of this decade, namely sustainability and demographic change / employer branding. As part of its sustainability efforts, the DZ BANK Group has formulated measurable climate targets for over half of the business portfolio. In 2025, it also plans to make biodiversity a new area of focus in its sustainability program and to take account of it across all divisions and relevant banking processes. The management and implementation of sustainability in the DZ BANK Group is the responsibility of the Group Sustainability Committee (GSC) at the level of the Board of Managing Directors. The GSC reports regularly to the Group Coordination Committee, which is the highest-level management and coordination committee in the DZ BANK Group. When it comes to employer branding, the group entities are implementing action plans to attract workers with the necessary skills. In this context, DZ BANK regards recruitment as a groupwide task in which all employees and managers play a part.

In addition, each individual entity in the DZ BANK Group pursues a range of strategic initiatives, such as the 'Verbund First 4.0' strategic program at DZ BANK AG Deutsche Zentral-Genossenschaftsbank, Frankfurt am Main, (DZ BANK), the 'WIR @ R+V – Growth. Innovation. Profitability.' program at R+V Versicherung AG, Wiesbaden, (R+V Versicherung; subgroup abbreviated to R+V), the '#Fokus100' program at Bausparkasse Schwäbisch Hall AG, Schwäbisch Hall, (Bausparkasse Schwäbisch Hall; subgroup abbreviated to BSH), and the 'Fit for Future' program at Union Asset Management Holding AG, Frankfurt am Main, (Union Asset Management Holding; subgroup abbreviated to UMH).

In the year under review, the German government and many trade associations and companies signed a joint declaration of intent in respect of the WIN Initiative (Growth and Innovation Capital for Germany). The initiative is aimed at improving fiscal, legal, and financial structures so as to make it easier for innovative start-ups to access private capital. The Cooperative Financial Network is supporting the WIN Initiative by participating in areas in which the individual entities in the DZ BANK Group can contribute their strengths. For example, it plans to make direct equity investments, provide equity financing, and set up a growth fund.

### **1.1 DZ BANK – central institution and corporate bank**

DZ BANK consists of DZ BANK – holding function and DZ BANK – central institution and corporate bank. DZ BANK – holding function, which is treated separately in the internal reporting structure, is used to pool a range of responsibilities, notably tasks carried out on behalf of the DZ BANK Group in relation to commercial law, tax, and prudential supervision. It does not constitute a separate operating segment within the meaning of IFRS 8.5 and is not analyzed separately in this chapter, ‘Business model and strategic focus’.

The strategic focus of DZ BANK, as described below, essentially relates to the activities of DZ BANK – central institution and corporate bank. DZ BANK – central institution and corporate bank comprises both the cooperative central institution function, which supports the operating activities of the local cooperative banks, and the corporate bank function.

For the sake of simplicity, DZ BANK – central institution and corporate bank equates to DZ BANK in this chapter, ‘Business model and strategic focus’.

At DZ BANK, the strategic initiatives designed to ensure the bank’s resilience for the future are brought together in the ‘Verbund First 4.0’ strategic program. The program is aimed at improvements in three key areas: market offering, control and production processes, and corporate culture. It is divided into implementation packages, with additional packages added in 2024. These include the ‘Fit4Growth’ initiative, in which DZ BANK is focusing on optimizing and stepping up cross-divisional collaboration on key processes. Going forward, the focus will be on the ongoing work on the processes. Activities around the themes of treasury and funding were also expanded, and a new implementation package for activities relating to generative AI was created. In 2024, this included rolling out an extensive continuing professional development program that draws on a variety of formats and media.

The following sections describe how DZ BANK is implementing its strategy in the various business lines.

#### **1.1.1 Cooperative Banks/Verbund**

The cooperative banks are DZ BANK’s most important customer group, its shareholders, and its partners in joint activities covering sales and the provision of advisory services. The focus of the Cooperative Banks/Verbund division is to meet the needs of this relationship of support for the cooperative banks. The Regionaldirektoren [regional directors] of DZ BANK are an important point of contact and customer relationship manager for the cooperative banks, with the aim of assisting them with their business activities in the regional markets. Moreover, DZ BANK’s presence throughout Germany ensures that it can be physically close to the banks it supports.

DZ BANK offers the cooperative banks consultancy and other services at every stage of strategic bank management and regulatory processes. In addition, DZ BANK assists the local cooperative banks with treasury and controlling aspects of bank management, such as planning and risk management, as well as with optimization for strategic bank management purposes and with own-account investing activities.

The support for the cooperative banks regarding sustainability is provided at various levels. Knowledge is shared using a number of different dialogue formats and events, such as the new sustainability meet-up that was jointly organized by Atruvia, the BVR, DG Nexolution eG, Wiesbaden, and DZ BANK in the reporting year. The new event replaced previous formats, such as the sustainability conference. In addition, a sustainability portal provides members with a central platform for sustainability information. Collaboration with the cooperative banks on sustainability matters is expected to intensify in the years ahead.

In the year under review, the regular strategy events held by Atruvia, the BVR, and DZ BANK in collaboration with the Cooperative Financial Network's regional banking associations were again combined into a multi-company format entitled 'Strategie-Hub Regional 2024' with a series of four regional events. For the first time, an additional 'Strategie-Hub Regional 2024 kompakt' event was held in Leipzig for the cooperative banks located in eastern Germany. Furthermore, network committees ensure that the cooperative banks are closely involved in DZ BANK's strategic considerations and initiatives. The aim of the DZ BANK Group's Central Advisory Council is to enable important strategic matters in the DZ BANK Group to be discussed in depth and to connect the various players and levels in the Cooperative Financial Network. DZ BANK also has five regional Banking Advisory Councils that carry out an advisory and multiplier function.

### 1.1.2 Corporate Banking

In the corporate banking market, DZ BANK supports the cooperative banks. This support concept is geared to the needs of corporate customers and to the individual market situation and is integrated with the activities of the Cooperative Financial Network. DZ BANK has twelve regional branches that look after both its direct customers and its customers in the joint business with the cooperative banks at a regional level. Customer relationship management for multinationals, the agricultural and healthcare sectors, and Cooperative Financial Network customers has been grouped together in the Central Corporate Banking division in Frankfurt am Main.

The digitalization of banking processes is becoming increasingly important in the corporate banking business in Germany. DZ BANK is supporting the cooperative banks in this regard, for example by upgrading the VR GeschäftsNavigator (VR business navigator), which is used by 530 local cooperative banks. In 2024, DZ BANK also teamed up with the BVR to develop a new sales concept in order to improve the efficiency of marketing.

DZ BANK's Request-to-Pay (RtP) solution consists of new offerings that are designed not only to optimize accounting and payments processing for corporate customers and their retail customers but also to contribute to the digital revolution. RtP bridges the gap between billing and bill payment, which should thereby enable companies to reduce the amount of administration required. The benefit of the solution for their retail customers is that they do not need to spend time entering data during the billing process. Working with Atruvia and market partners, DZ BANK developed this solution into what is, from its perspective, a market-ready product. Corporate and retail customers can use the new type of payment request through participating cooperative banks. It will be important that banks outside the Cooperative Financial Network also engage with RtP to ensure that it reaches a wide range of corporate customers' end customers.

In addition to digitalization, other areas of focus in 2024 were integrating sustainability into the customer dialogue and helping corporate customers with their transformation in the context of the decarbonization of industry. This is illustrated by the growth of funding for renewable energies. DZ BANK reached a milestone in 2024 by providing funding for its biggest photovoltaics project yet. The bank, which sees itself as a supporter of its customers' transformation, pays particular attention to training its corporate banking relationship managers on environmental, social and corporate governance (ESG) aspects. The assessment process for ESG risks in the lending business, which was launched with the ESG credit risk score in 2023, was expanded in the reporting year. DZ BANK is in the process of developing a definition for sustainability-oriented products and a classification approach in the form of a sustainability product framework. The classification approach for sustainability-oriented products is currently being trialed as part of a one-year pilot phase in order to check whether it is fit for purpose. It is due to be finalized and integrated with sales processes in 2025.

DZ BANK also aims to support the international business of the Cooperative Financial Network's corporate customers. To grant them access to the world of international business, DZ BANK developed an information and communication tool called VR International, along with a related sales concept. DZ BANK offers a range of solutions geared to Germany's internationally oriented economy, including foreign payments processing, import and export credit guarantees and financing, and currency hedging. It has four branches and six representative offices outside Germany.

To improve the Cooperative Financial Network's performance when it comes to export credit guarantees and financing for German corporate customers, DZ BANK signed up additional correspondent banks in high-growth countries as business partners in 2024. DZ BANK also has detailed cooperation agreements with selected correspondent banks.

DZ BANK is the center of excellence for development lending business within the Cooperative Financial Network. It supports the cooperative banks in two ways. Firstly, its development lending experts help the cooperative banks to advise their end customers. And secondly, it is replacing existing sales and communication channels with digital processes and portal services. The focus of these activities is on stabilizing market share and harnessing potential for growth.

### 1.1.3 Retail Banking

In the Retail Banking business line, DZ BANK offers cooperative banks, cooperation banks, and retail customers a comprehensive range of services based on its financial services concept. One of the primary areas of focus is the marketing of securities business with retail customers, for which DZ BANK provides products, processes, and platforms.

The products provided include customer investment solutions for advisory customers and independent retail investors of all experience levels. The product range consists of DZ BANK's own interest-rate products, derivatives and, in particular, investment certificates relating to particular trends or topics and sustainability. In this context, investment certificates with a charitable income component are issued. This involves DZ BANK and the participating cooperative banks giving up a share of their margin, with the money going to selected organizations in the form of sponsorship. DZ BANK has also added savings plans based on funds, exchange-traded funds (ETFs), and equities to its product range, which also contains investment account price models that are geared to customer needs and cater to market trends. Among these models are traditional investment accounts that are also available online, meinDepot (my investment account) for young customers, and an investment account with a flat-rate fee. This is all designed to further DZ BANK's objective of establishing the brokerage solution in the customer business as a comprehensive depository for securities that can be used by a broad range of customers at the cooperative banks.

DZ BANK offers a management cycle to support the cooperative banks with their strategic planning. This encompasses the planning, implementation, and control of the corporate strategy as well as tools for data and analytics. It also helps the cooperative banks to fulfill their regulatory obligations. As part of its marketing programs for young customers, new investment accounts, and sustainability, DZ BANK offers packages of measures in the form of processes and support services. These also help with the fulfillment of regulatory requirements, for example concerning sustainability in advisory services.

In accordance with its digitalization strategy, DZ BANK is developing platform solutions for advisors and customers of the cooperative banks and cooperation banks. DZ BANK's meinGIS platform provides advisors with access to the latest market information, such as securities prices, price charts, and corporate news. As well as visiting a branch, customers in the securities business can access their bank digitally so that they can quickly open an online investment account themselves and carry out trades online, for example. This brokerage solution is integrated into the VR Banking App, which provides users with a range of information and products, including market data, real-time prices, analysis tools, access to DZ BANK research, and product suggestions. Furthermore, retail customers can use the Meine Anlagezertifikate (my investment certificates) function to obtain detailed information on the investment products in their investment accounts at any time. In 2025, DZ BANK plans to introduce cryptoasset trading for the local cooperative banks' retail customers.

### 1.1.4 Capital Markets

DZ BANK offers advisory and sales services in relation to investment and risk management products covering the interest-rate, credit, equities, and currency asset classes for the benefit of its institutional customers in Germany and abroad, the cooperative banks in their own-account investing activities, and its corporate customers. Its offering encompasses primary market, secondary market, and research services.

DZ BANK's Group Treasury division is responsible for managing and optimizing liquidity throughout the DZ BANK Group. This ranges from managing the cooperative banks' day-to-day cash inflows and outflows in the context of the cash-pooling function performed by DZ BANK as the cooperative central institution to optimizing the procurement of liquidity by issuing securities. These are sold through the bank's own sales units and through intermediaries to institutional customers, such as insurance companies and fund management companies in Germany and abroad, and to retail customers of the cooperative banks. Group Treasury is also responsible for securities documentation in DZ BANK's capital markets business, which includes equity instruments and debt instruments issued by DZ BANK or by customers.

DZ BANK is working on further expanding its sustainability expertise and ESG activities in its capital markets business with institutional customers. In 2024, DZ BANK supported green, social, and sustainability bonds. It also helped a number of issuers to develop and/or update their underlying frameworks. In the same period, DZ BANK placed sustainable promissory notes in the market. It was one of the leading banks in terms of supporting euro-denominated benchmark green covered bonds in 2024 (market share of more than 6 percent). DZ BANK regards biodiversity as a topic of long-term importance for the capital markets because it believes that nature-related risks will increasingly come to the attention of the capital markets going forward. From DZ BANK's perspective, the transactions that it has supported so far attracted significant interest from investors, such as the issuance of Iceland's first green government bond. DZ BANK not only placed the green bond in the capital markets but also worked with the customer to develop a framework that defines how the money will be invested in projects with a positive environmental impact.

The digitalization of existing business models is continuing unabated in the capital markets business. At the end of September 2024, DZ BANK participated in an exploration phase of the European Central Bank (ECB), in which it tested the automated settlement cycle of the smart derivative contract (SDC) in real-world market conditions using Deutsche Bundesbank's Trigger Solution, which is based on distributed ledger technology (DLT) infrastructure. Using its own product innovation, DZ BANK managed to establish real DLT node operation with Deutsche Bundesbank in order to highlight the potential of digital disintermediation and automation in the capital markets. In another milestone, DZ BANK is evaluating its support for the first blockchain-based digital bond to be issued by Germany's KfW development bank in the form of a cryptosecurity. DZ BANK acted as both bookrunner and depository in this transaction, thereby minimizing the expense for investors. The bank already holds cryptosecurities for its institutional customers on its proprietary cryptodepository platform. In December 2024, DZ BANK submitted a MiCAR notification (MiCAR = Markets in Crypto-Assets Regulation) to the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin) [German Federal Financial Supervisory Authority] requesting permission to provide depository services for cryptoassets and carry out transfer services so that it can also operate as a depository for its institutional customers' cryptoassets in the future.

To further the organic development of the Capital Markets business line, opportunities for growth were identified with the aim of offering a broader range of products and services to customers and improving performance. The main areas of focus are growth of business with corporate customers, growth of business with institutional customers, and process-related and organizational improvements.

In cooperative network business, DZ BANK is updating its advisory and sales processes to take account of the changing requirements of the cooperative banks and in order to leverage potential efficiencies. The EGon own-account investing platform was also further developed in the reporting year. Since the autumn, for example, it has been possible to integrate assessments provided by DZ BANK Research directly into the lending process. This should make processes more efficient for users.

#### 1.1.5 Transaction Banking

In the Transaction Banking business line, DZ BANK provides its customers with payments processing, card processing, customer-centric solutions, capital markets services, and securities services. It also offers a depository function for investment funds, plus advisory services. DZ BANK's objective in this context is to consolidate and continually improve the competitiveness of the entities within the Cooperative Financial Network with regard to transaction banking.

The focus of this business line is on ensuring that the Cooperative Financial Network is well equipped for the future requirements of transaction banking. DZ BANK is involved in the development of digital payment processes through its role as a scheme member in Visa's and Mastercard's card processing business, in the European Payments Initiative (EPI) for establishing the Wero European payment system, and in various partnerships in this context. In July 2024, EPI launched the Wero digital payment process in Germany with person-to-person (P2P) payments in order to cater to the digitalization trend and meet demand from customers for wallet solutions while also securing the customer interface with direct account-to-account transactions. This is to be followed in the years ahead by additional applications such as Wero PRO (digital payments for small businesses) and the facilitation of payments in e-commerce and brick-and-mortar stores. Wero is available to the cooperative banks' customers in the VR Banking App. Digitalization is also addressed by the RtP solution, which is designed to make the accounting and payment process easier for companies and retail customers. Following an initial pilot project, the technical and contractual foundations have been laid for all cooperative banks and their end customers so that the initiative can be expanded to include selected corporate customers (see also chapter I.1.1.2 'Corporate Banking').

Alongside the BVR, DZ BANK is also supporting and evaluating the ECB's planning for a digital euro and is monitoring the associated impact on private-sector solutions and initiatives. From the perspective of the Cooperative Financial Network, it is important that the Wero digital payment solution, which has a European focus, reaches a wide range of customers before the digital euro is introduced. This will make it possible to offer to the ECB to integrate the digital euro into the Wero application as a means of payment.

In 2024, DZ BANK completed its new centralized payments processing platform, which is one of its largest infrastructure projects of recent years. Thanks to the ZV ONE project, the Cooperative Financial Network's entire payments processing operations are now combined on one powerful, inhouse platform. This harmonization is part of the Cooperative Financial Network's strategy and should help to further consolidate the network's payments processing resources, functions, and services and, from DZ BANK's perspective, to create a structure for payments processing that is efficient and fit for the future. This not only creates cost advantages but also paves the way for further innovation in payments processing. DZ BANK thus sees itself as a payment provider not only for the almost 700 cooperative institutions but also for banks outside the cooperative sector.

DZ BANK is keeping step with the evolution of card processing by enhancing its portfolio of solutions for retail and corporate customers. Key areas of investment in digitalization solutions for local cooperative banks in the reporting year were the online order process and a multitude of self-service options. In 2024, progress continued apace on the project to enable cards to be issued in real time to the Cooperative Financial Network's end customers. This function is expected to become available in the first quarter of 2025. Card details are displayed directly in the VR Banking App and can be used immediately. In corporate banking, the FikuFit ZV advisory module helps local cooperative banks to prepare for corporate customers' current and future payments processing requirements. The Digitale Region [digital region] advisory and sales concept brings together solutions that the local cooperative banks can use to support the digital transformation of their local authority customers and regional companies, and thus implement relevant products and services.

DZ BANK is continuing to pursue its growth strategy in the depository business. The aim in doing so is to strengthen its market position by stepping up business with investment management companies. It also intends to intensify its collaboration in the depository business with DZ PRIVATBANK S. A., Luxembourg, (DZ PRIVATBANK) under the auspices of the Fondshafen (fund haven) campaign, which brings together the DZ BANK Group's depository activities.

## 1.2 BSH

BSH is the consumer home finance provider in the DZ BANK Group and offers solutions that enable customers to obtain home finance, build up private retirement or other savings, or own their own home. The long-term objective is to be a reliable partner that helps its customers to achieve their dreams when it comes to their home. BSH works with the cooperative banks to develop solutions in the homes and housebuilding ecosystem,

thereby helping to strengthen the Cooperative Financial Network. In 2024, it published its ‘#Fokus100’ business strategy with the objective of making sure that it can achieve its long-term vision.

In its core home finance business, BSH offers its customers and partners a portfolio of financing products that include interest-only loans and building loans. These can be used in a variety of ways and incorporate a broad range of contract terms and fixed-interest periods. Thanks to the extensive product portfolio, collaboration within the Cooperative Financial Network on a decentralized basis and, in BSH’s view, high-quality advice, BSH aims to create solutions that are tailored to customers’ needs.

ESG key figures are used to measure the sustainability of the credit portfolio. BSH intends to reduce the credit portfolio’s carbon footprint by 4 percent per year between now and 2030. In this context, BSH placed its second green Pfandbrief in the capital markets in 2024, following on from the first such paper issued at the start of the year. In accordance with BSH’s Green Bond Framework, the proceeds from the green covered bond are being used to fund loans for the construction, purchase, or renovation of energy-efficient residential properties.

In its core home savings business, BSH is further developing its range of products under the Fuchs06 scale of rates and charges. The home savings tariffs and financing plans offer solutions that cater to different target groups and their individual financial needs. For example, interest on loans can be fixed for the future or for follow-up finance, renovation work aimed at improving energy efficiency and mitigating climate change can be carried out thanks to short saving periods, and there are home savings tariffs that help customers to start saving and to build up their savings.

In its international business, BSH focuses on maintaining the existing approach to business in Slovakia and China.

BSH’s position as the largest German building society and one of Germany’s leading home finance providers means that it can make a direct contribution to sustainability through its core business, working in partnership with the cooperative banks. To this end, BSH provided further skills training for its field sales team and, so far, has trained around 2,000 financial experts as certified modernization advisors, of whom around 1,400 have gained an additional qualification as a certified development lending advisor.

The Cooperative Financial Network is continuing to develop its homes and housebuilding ecosystem. Impleco GmbH, a joint venture between BSH and PSD banks, is playing a key part in this. Its objective is to establish a digital cooperative ecosystem for homes and housebuilding that has a regional emphasis. The main products are wohnglück.de, which is a Germany-wide platform for all matters relating to homes and real estate, and PIA (personal real estate assistant), a range of white-label services for regional cooperative banks.

### 1.3 R+V

R+V is the cooperative center of excellence for insurance, healthcare cover, and retirement pensions in the Cooperative Financial Network. It offers insurance products for retail and corporate customers in its non-life insurance, life insurance and pensions, and health insurance business segments. R+V also provides reinsurance cover for non-life insurance.

The company’s strategic objectives are to improve the customer experience, follow a long-term trajectory of stable and income-oriented growth, and maintain an appropriate level of profitability, underpinned by sustainable, sound business operations. R+V intends to become one of the leading sustainable insurance companies. Its insurance products are already generally geared toward economic sustainability because they offer customers either an opportunity for long-term capital formation in a pension plan or a form of financial protection against risk.

One of R+V’s goals under its strategy is to support its customers as they transition to greater sustainability. This applies in all of its business segments. In this context, R+V is contributing to the switch to cleaner energy and transportation, for example by offering insurance solutions for electric and hybrid vehicles, photovoltaic systems, geothermal power, and geothermal systems. R+V also makes a valuable contribution to sustainability

through its environmental liability and environmental impairment insurance products, insurance against natural hazards, and advice on risk prevention in these areas. In its life insurance business, it offers special investment strategies such as R+V InvestmentKonzept Duo Invest, in which sustainability criteria are taken into account. The objective is for R+V's investment portfolio to be climate-neutral by 2050. R+V also intends to reduce the carbon footprint of its directly held properties between now and 2030.

R+V plans to continue expanding in growth areas such as healthcare and long-term nursing care, in which it is aiming to evolve from a health insurer into a health partner. This includes not only developing healthcare services but also extending its solutions for companies and their employees. In this context, R+V offers its policyholders R+V HealthBenefits, which are free digital health services that are available, for example, to people covered by occupational health insurance under R+V's new PROFIL healthcare concept. The new R+V Gesundheit app, which was introduced in 2024, is the central platform for all of R+V's digital health services.

R+V is broadening its capital expenditure program, particularly with regard to investment in digitalization, so that it can continue to meet customers' evolving needs going forward. By maintaining a firm focus on omnichannel sales, it intends to offer customers the optimum balance of personal and digital sales channels.

#### 1.4 TeamBank

TeamBank AG Nürnberg, Nuremberg, (TeamBank) is the center of excellence in the Cooperative Financial Network for state-of-the-art liquidity management. In Germany, it offers its easyCredit family of consumer finance products. In Austria, TeamBank collaborates with the cooperative banks to offer 'der faire Credit', a consumer finance product.

The product range also includes 'easyCredit-Ratenkauf', which is an installment purchase solution that can be used online, in-store, and in direct sales. According to TeamBank, the installment purchase solution makes it possible to reach new target groups for the Cooperative Financial Network by means of embedded finance.

TeamBank's strategic activities are focused on generating long-term profitable growth for the Cooperative Financial Network. It is striving to transition from a purely ad hoc lending business (consumer finance) to a long-term liquidity partner (credit lines). TeamBank works with the Deutschland im Plus foundation in order to prevent consumers from becoming over-indebted.

TeamBank also focuses on using technologies and laying the technical foundations for its pursuit of growth. Its GENOFLEX consumer finance platform was developed in response to the partner banks' need for a solution that can also be used for consumer finance from lenders other than TeamBank. In this way, TeamBank intends to strengthen its position as a center of excellence for liquidity management, consolidate the relationship with its partner banks, and increase value creation within the Cooperative Financial Network.

#### 1.5 UMH

UMH is the asset manager in the Cooperative Financial Network and offers solutions for retail and institutional clients. In both areas of business, it is aiming for further expansion of the volume of assets under management.

For retail clients, UMH is working to extend its range of solutions for partner banks with a view to maintaining its growth trajectory. To this end, it is expanding its omnichannel capability and supporting the efforts of the cooperative banks to develop business on a digital basis by helping them to improve technological platforms and satisfy regulatory requirements. UMH is also responding to changing investor requirements and in recent years, for example, has constantly extended its range of sustainable investment funds. One of the ways that UMH is approaching nature-related matters is by publishing biodiversity guidelines that complement its sustainability code, responsible investment policy, and climate strategy.

UMH updated its climate strategy in 2024, under which it is continuing to pursue the objective of achieving climate neutrality in its securities and commercial real estate portfolios before 2050. It is also working on further reducing the greenhouse gas emissions that it produces as a company.

In the institutional client business, UMH is the central asset manager for the Cooperative Financial Network. It also provides asset management for German and international institutional clients outside the cooperative sector. It offers special funds, institutional mutual funds, asset management, advisory services, capital preservation strategies, and quantitative asset management strategies. Risk management lies at the core of all investment processes. UMH's objective in its institutional client business is to consolidate its positioning as an active risks/returns manager and sustainability manager. The volume of sustainably managed assets has risen steadily in recent years.

UMH follows a transparent approach to sustainable investment. This is the responsibility of the ESG committee in portfolio management. UMH has also established an interdisciplinary sustainability team for real estate investment. The properties selected for the funds in both the retail and the institutional real estate business must satisfy certain quality criteria and pursue the objective of generating stable rental income over the long term in order to secure a return for the investor. UMH aims for portfolios that are broadly diversified in terms of geography and usage type.

UMH is investing in key growth sectors such as digitalization in order to cater to what it regards as the increasing importance of platforms and new technologies. For example, a fund launched in 2024 enables investors to participate in the development of blockchain technology and cryptomarkets.

## 1.6 DZ HYP

The core business policy objective of DZ HYP AG, Hamburg and Münster, (DZ HYP) is to embed real estate finance and public-sector finance in the Cooperative Financial Network and to operate the finance business jointly with the cooperative banks. To this end, DZ HYP offers a range of products and services to the cooperative banks and works together with them to develop business in the regional markets focusing on corporate, retail, and public-sector customers. DZ HYP's sales activities are based on long-term customer relationships in its direct and cooperative network business and on products and services that are defined with a view to their risk and reward.

In its Corporate Clients business line, DZ HYP has its own direct business and also acts as a partner to the cooperative banks. Customers in this business include investors, project developers, property developers, and companies in the housing sector. The focus is on real estate finance in the German market. German customers in selected international markets are supported too. The digitalization of the Corporate Clients business line is a priority action area for DZ HYP. The FK Digital project, which is aimed at creating a new digital approach to loan processing in corporate customer business, is expected to deliver the first significant results in 2025. In addition, DZ HYP has developed a method for identifying sustainable properties with which it hopes to make an even bigger contribution to sustainable development and to forge ahead with its activities in this sphere.

DZ HYP also works closely with the local cooperative banks in its Retail Customer business line, where the product portfolio includes initial and follow-up finance for new builds, purchases, and modernization/renovation. The VR-BaufiComfort product has established a new collaboration model in which the local cooperative banks can focus on providing customers with individual advice while DZ HYP deals with all aspects of loan processing. Sustainability continues to play a key role in the Retail Customer business line. By introducing the Eco product feature, DZ HYP can now offer a reduced interest rate for energy-efficient properties with annual final energy consumption of no more than 50 kWh per square meter. Marketing within the VR-Baufi product family got under way in 2024. New target-group-specific communication formats were also established, with webinars and news channels facilitating the ongoing sharing of knowledge and experience with the local cooperative banks.

Within the DZ BANK Group, DZ HYP also operates as the center of excellence for collaboration with public-sector customers. The core element of this business with local authorities and their legally dependent subsidiaries is the awarding of short-term loans to local authorities and loans to public-sector entities in collaboration with the cooperative banks. Customers' sustainability credentials are also covered in the risk assessment in this business line. DZ HYP implemented an extended ESG analysis in order to place a greater

emphasis on sustainability matters in its Public Sector business line and has made the analysis an integral element of the local authority lending and decision process. Drawing on grouped KPIs, a highly granular and multidimensional sustainability assessment is conducted for all local authorities in Germany on the basis of the 17 UN sustainability goals.

In the funding business, DZ HYP further established itself as an issuer of green Pfandbriefe in the year under review. Most of the paper issued was placed in the primary market in benchmark format. By issuing green Pfandbriefe, DZ HYP generates funds for financing energy-efficient buildings and thereby supports the transformation of the real estate industry.

### 1.7 DZ PRIVATBANK

DZ PRIVATBANK, together with its branches at eight locations in Germany, its two subsidiaries DZ PRIVATBANK (Schweiz) AG and IPConcept (Luxemburg) S. A., and IPConcept (Schweiz) AG, a subsidiary of DZ PRIVATBANK (Schweiz) AG, is the center of excellence for private banking and is also involved in fund services and lending in all currencies in the Cooperative Financial Network. DZ PRIVATBANK specializes in individual solutions for private banking customers, with a portfolio ranging from classic asset management, asset structuring, and investment advice to financial planning, pension planning, and advice on charitable foundations.

The expansion of its advisory and digital services is aimed at strengthening customer relationships and attracting new customers. Digital innovations, such as Mein Vermögensportal [my investment portal] and the real estate check are designed to improve interaction with customers and the quality of the end-to-end advice provided. In 2024, the online private banking options were extended for end customers, for example so that alternative asset classes such as real estate and valuables are included. The plan for 2025 is to generate further strong growth in DZ PRIVATBANK's Private Banking business line on the basis of closer collaboration with the cooperative banks. The BVR believes that private banking offers substantial potential for the local cooperative banks to generate additional income.

In recent years, DZ PRIVATBANK has continued to consolidate its market position in Germany by working closely with the cooperative banks. The main core growth areas at DZ PRIVATBANK are private banking / wealth management and the fund business relating to liquid and alternative asset classes. In addition, the LuxCredit financing options for retail and corporate customers supplement the range of variable lending products denominated in euros and other currencies for the cooperative banks. The primary focus is on the VR ImmoFlex solution, which the cooperative banks and DZ PRIVATBANK are using to target the 50+ age group.

The DZ PRIVATBANK 2030 strategy has been launched to drive the bank's growth. Maintaining its existing business strategy, the bank is examining options for optimizing areas such as corporate governance.

### 1.8 VR Smart Finanz

VR Smart Finanz AG, Eschborn, together with its subsidiary VR Smart Finanz Bank GmbH, (together referred to as VR Smart Finanz) is the digital provider of finance for the self-employed and small businesses in the Cooperative Financial Network. It offers financing solutions and digital services for the day-to-day financial needs of regional small and medium-sized enterprises (SMEs) and the cooperative banks' small-business and self-employed customers. VR Smart Finanz AG's portfolio encompasses object finance solutions for hire purchase and leasing for assets up to €1 million as well as the digital Bonitätsmanager (credit status manager) service, which helps to optimize businesses' credit quality and create transparency. The 'VR Smart flexibel' business loan for up to €100,000 is offered through VR Smart Finanz Bank GmbH. The 'VR Smart Guide' tool for bookkeeping and invoice management is operated through VR Smart Guide GmbH.

VR Smart Finanz attaches particular importance to offering automated, rapid finance decisions within a few minutes and to providing an omnichannel approach for business loans. The loan amount is generally disbursed within 24 hours. Sales partners also benefit from data-supported marketing approaches. VR Smart Finanz's

portfolio therefore contributes to the digital and personal banking portfolio and to omnichannel sales in corporate banking.

As part of its strategy, VR Smart Finanz constantly strives to enhance its finance solutions, integrate them into the internal platforms used by the Cooperative Financial Network, and establish new decentralized sales channels and sales partners, such as digital financing platforms, for the Cooperative Financial Network.

## 2 Management of the DZ BANK Group

### 2.1 Management units

(The following chapter contains disclosures relating to ESRS disclosure requirement ESRS 2 SBM-1 paragraphs 40 a) i, ii and 42 a) b).)

The DZ BANK Group comprises DZ BANK as the parent company and the DZ BANK Group's subsidiaries in which DZ BANK directly or indirectly exercises control.

All entities in the DZ BANK Group are integrated into groupwide management. In the case of subgroups, the disclosures in the group management report on management units relate to the entire subgroup comprising the parent company of the subgroup plus its subsidiaries and second-tier subsidiaries. The management units are managed by the parent company in the subgroup, which is responsible for compliance with management directions in the subsidiaries and second-tier subsidiaries. The following management units form the core of the financial services group:

- BSH
- R+V
- UMH
- TeamBank
- DZ BANK – central institution and corporate bank (DZ BANK – CICB)
- DZ HYP
- DZ PRIVATBANK
- VR Smart Finanz

The management units are each managed as a separate operating segment. DZ BANK – holding function is also presented separately, although it does not constitute an operating segment within the meaning of IFRS 8.5.

The DZ BANK – CICB operating segment comprises both the cooperative central institution function, which supports the operating activities of the local cooperative banks, and the corporate bank function. DZ BANK – holding function is used to pool a range of responsibilities, notably tasks carried out on behalf of the DZ BANK Group in relation to commercial law, tax, and prudential supervision.

All risks at DZ BANK, and therefore arising in connection with the CICB segment and the holding function, are determined, reported, and managed for DZ BANK. The aim of this approach is to satisfy the regulatory requirements under Basel Pillar 1 and Pillar 2 whereby DZ BANK must be treated as one bank overall. This also meets the German Minimum Requirements for Risk Management for Banks and Financial Services Institutions (MaRisk BA). The operating segments presented in the risk report in this group management report (chapter VI.2.3) are consistent with the operating segments in the consolidated financial statements.

The terms DZ BANK Group and DZ BANK financial conglomerate are synonymous and refer to all the management units together. The context dictates the choice of term. For example, in the case of disclosures relating to economic management, the focus is on the DZ BANK Group, whereas in the case of regulatory issues relating to all the management units in the DZ BANK Group, the term DZ BANK financial conglomerate is used.

The DZ BANK financial conglomerate largely comprises the DZ BANK banking group and R+V. DZ BANK acts as the financial conglomerate's parent company.

### 2.2 Governance

Governance in the DZ BANK Group is characterized by the general management approach of the DZ BANK Group, appointments to key posts in the subsidiaries, and the committee structure.

2.2.1 General management approach

The general management approach consists of a combination of centralized and decentralized management tools. It is aligned with the business model and risks of the DZ BANK Group as a diversified financial services group that is integrated into the Volksbanken Raiffeisenbanken Cooperative Financial Network and that provides this network with a comprehensive range of financial products.

The DZ BANK Group is a financial services group comprising entities whose task as product specialists is to supply the Cooperative Financial Network with an entire range of financial services. Because of the particular nature of the DZ BANK Group, it is managed both centrally and locally with clearly defined interfaces and taking into account business policy requirements.

2.2.2 Appointments to key posts in the subsidiaries

For the purposes of managing the subsidiaries through appointments to key posts, a representative of DZ BANK is appointed in each case as the chairman of the supervisory body and generally also as the chairman of any associated committees (e.g. the risk and investment committee, the audit committee, and the human resources committee).

2.2.3 Corporate management committees

Figure I.1 provides an overview of the committees of particular importance in the management of the DZ BANK Group.

FIG. I.1 – MANAGEMENT COMMITTEES IN THE DZ BANK GROUP

The **Group Coordination Committee** is the highest-level management and coordination committee in the DZ BANK Group. The objectives of this committee are to strengthen the competitiveness of the DZ BANK Group and to coordinate fundamental product and sales issues. The committee also aims to ensure coordination between the key entities in the DZ BANK Group to achieve consistent management of opportunities and risks, allocate capital, deal with strategic issues, and leverage synergies. Its members comprise the Board of Managing Directors of DZ BANK and the chief executive officers of BSH, DZ HYP, DZ PRIVATBANK, R+V, TeamBank, UMH, and VR Smart Finanz.

Various committees consisting of representatives from all strategic business lines and group functions assist the Group Coordination Committee’s decision-making by preparing proposals. These are the following committees: the Group Risk and Finance Committee, the Group IT Committee, the Group HR Committee, the product and sales committees for retail customers, corporate customers, and institutional customers, the Group Procurement Committee, the Group Sustainability Committee, the Heads of Internal Audit working group, the Economic Roundtable, and the Innovation Roundtable.

The **Group Risk and Finance Committee** is the central committee in the DZ BANK Group responsible for proper operational organization and, in particular, risk management in accordance with section 25 of the German Supervision of Financial Conglomerates Act (FKAG) and section 25a of the German Banking Act (KWG). It assists DZ BANK with groupwide financial and liquidity management, risk capital management, and recovery and resolution planning. The Group Risk and Finance Committee also assists the Group Coordination Committee in matters of principle. The members of this committee include the relevant executives at DZ BANK responsible for finance, risk, and treasury. The committee members also include executives at various subsidiaries. The Group Risk and Finance Committee has set up the following working groups to prepare proposals for decision-making and to implement management action plans relating to financial and risk management at group level:

- The **Group Risk Control working group** supports the Group Risk and Finance Committee in all matters concerning risk and the management of risk capital and market risk in the DZ BANK Group, and in matters relating to risk reporting. At DZ BANK level, the monitoring and control of the aggregate risks to the bank is coordinated by the Risk Committee. The **Risk Committee** makes recommendations to the entire Board of Managing Directors in matters relating to risk management, risk methodology, risk policies, risk processes, and the management of operational risk.
- The **Architecture and Processes Finance/Risk working group** assists the Group Risk and Finance Committee with the further development of the integrated finance and risk architecture in the DZ BANK Group. In terms of the corporate management of the DZ BANK Group, this committee works on refining the blueprint for the business, process, and data architecture and on ensuring a coordinated roadmap, a transparent project portfolio, and a holistic data governance approach.
- The management of credit risk throughout the group is the responsibility of the **Group Credit Management working group** of the Group Risk and Finance Committee. This working group monitors compliance with the rules in the group credit risk policy in connection with its involvement in drawing up group credit standards and related monitoring and validation processes as the basis for groupwide management of counterparty risk. In particular, this covers all measures relating to the monitoring and management of the limit allocation at individual counterparty level. The working group also participates in the further development and harmonization of the credit management organization and processes, and it discusses and continually develops the group credit risk strategy, group credit risk management, and group credit standards. It thus assists the Group Risk and Finance Committee with the groupwide harmonization of credit-related processes with due regard to their economic necessity. The monitoring and control of DZ BANK's overall portfolio for credit risk is coordinated by the **Credit Committee**, a committee of the Board of Managing Directors. It normally meets every week and makes decisions on material lending exposures at DZ BANK, taking into account the credit risk strategy of the DZ BANK Group. The Credit Committee is also responsible for managing country risk in the DZ BANK Group.
- The Group Risk and Finance Committee's **Market working group** is responsible for providing implementation support throughout the group in the following areas from the market viewpoint: capital management, balance sheet and balance sheet structure management, market risk management, liquidity and liquidity risk management, and funding activities. This body also focuses on coordinating and dovetailing funding strategies and liquidity reserve policies, as well as on independently determining funding needs and on preparing consistent investor relations and rating documents within the DZ BANK Group. In addition, the Market working group is responsible for refining the management of centrally measured market risk. At DZ BANK level, the **Asset/Liability Committee** is the central body responsible for the operational implementation of the strategic asset/liability management (ALM) requirements in the following areas: capital management, total assets management, liquidity management, and management of interest-rate risk in the banking book (IRRBB) and credit spread risk in the banking book (CSRBB). This committee also discusses overarching issues and current regulatory matters with the aim of identifying those requiring management action.

- The **Finance working group** advises the Group Risk and Finance Committee on matters concerning the consolidated financial statements, tax law at group level, regulatory law at group level, group controlling, and the management of financial resources. It discusses new statutory requirements and works out possible implementation options. The objective of the Finance working group is to continually update the uniform management framework used throughout the group (definitions, nomenclature, methodologies), particularly taking into account requests made by the supervisory authorities.
- The **Compliance working group** assists DZ BANK with compliance management across the group where this is legally required. It also advises the DZ BANK Group's Group Risk and Finance Committee on fundamental compliance-related issues. One of the primary tasks of the Compliance working group is to draw up common compliance standards for the DZ BANK Group; in addition, it serves as a platform enabling specialists to share information and agree on requirements across the group. When fulfilling its responsibilities, the Compliance working group must respect the individual responsibility of the heads of compliance in the group entities and ensure specific regulatory requirements are observed. The Compliance working group reports to the Group Risk and Finance Committee, headed by the member of the DZ BANK Board of Managing Directors responsible for compliance and finance, and by the member of the DZ BANK Board of Managing Directors responsible for risk control.
- The **Information Security working group** of the Group Risk and Finance Committee and of the Group IT Committee is the central body responsible for managing information security and information security risk in the DZ BANK Group. It advises the Group Coordination Committee, the Group Risk and Finance Committee, and the Group IT Committee on matters relating to specifying and adjusting information security targets and on the group's corporate strategy in this regard. The working group encourages information and experience relating to information security issues to be shared throughout the group, is responsible for the design of the risk management system for information security in the DZ BANK Group, and signs off the documentation forming part of the rules and regulations for the groupwide information security management system before this documentation is presented, where required, to the Boards of Managing Directors in the DZ BANK Group for approval.
- The **Outsourcing Management working group** is the central committee in the DZ BANK Group responsible for the management of outsourcing and sets out the general parameters for the management of outsourcing risk in the DZ BANK Group. It encourages information and experience relating to issues in connection with the management of outsourcing to be shared throughout the group. The Outsourcing Management working group is responsible for the design of the risk management system from the perspective of the group's minimum requirements for the management of outsourcing in the DZ BANK Group. It signs off the documentation forming part of the rules and regulations for the groupwide outsourcing management system before this documentation is presented, where required, to the Boards of Managing Directors in the DZ BANK Group for approval and assists the Group Coordination Committee, the Group Risk and Finance Committee, and the Group IT Committee with matters relating to specifying and adjusting targets for the management of outsourcing and with the group's corporate strategy in this regard.

The **Group IT Committee (GITC)**, comprising the members of the Boards of Managing Directors of the main group entities with responsibility for IT, supports the Group Coordination Committee in strategic IT matters. It is the highest-level IT management committee in the group and coordinates all overarching IT activities in the DZ BANK Group.

In particular, the Group IT Committee is responsible for the group IT strategy of the DZ BANK Group, makes decisions on collaboration issues between IT units, identifies and realizes synergies, specifies common IT standards, and initiates joint IT projects. The aim of the GITC is to develop a future-proof IT setup for the DZ BANK Group and to support the departments of the group entities and the local cooperative banks in their respective markets. The cooperative principle is practiced both within the DZ BANK Group and in the collaboration with the BVR and Atruvia.

From an operational perspective, the activities are coordinated by the Heads of IT group and implemented in the IT units in the DZ BANK Group.

The **Group HR Committee** normally comprises the members of the Boards of Managing Directors with responsibility for HR and the HR directors from the main entities in the DZ BANK Group. This committee helps the Group Coordination Committee address HR issues of strategic relevance. The Group HR Committee initiates and coordinates activities relating to overarching HR issues while at the same time exploiting potential synergies. It also coordinates the groupwide implementation of regulatory requirements concerning HR systems and facilitates the sharing of HR policy information within the DZ BANK Group.

The **product and sales committees** perform insight, coordination, and bundling functions relating to the range of products and services provided by the DZ BANK Group.

- The **retail customers** product and sales committee coordinates products and services, and the marketing activities of its members where there are overarching interests affecting the whole of the group. The common objective is to generate profitable growth in market share for the cooperative banks and the entities in the DZ BANK Group with a focus on customer loyalty and customer acquisition by providing needs-based solutions (products and processes) as part of a holistic advisory approach across all sales channels (omnichannel approach).
- The **corporate customers** product and sales committee is responsible for coordinating the strategies, planning, projects, and sales activities in the DZ BANK Group's corporate banking business if overarching interests are involved. The objective is closer integration in both the joint lending business with the cooperative banks and the direct corporate customer business of the entities in the DZ BANK Group.
- The aim of the **institutional clients** product and sales committee is to help strengthen the position of the DZ BANK Group in the institutional clients market.

The **Group Procurement Committee**, comprising the members of the Boards of Managing Directors and executives holding power of attorney at DZ BANK and its subsidiaries, supports the Group Coordination Committee in matters relating to procurement strategy in the DZ BANK Group. This committee manages the DZ BANK Group's procurement activities that are relevant throughout the group. In particular, the Group Procurement Committee makes decisions on collaboration issues between procurement units, identifies and realizes synergies, and specifies common standards and procedures with the objective of achieving optimum procurement terms and conditions for the entities of the DZ BANK Group. From an operational perspective, the activities are coordinated by the Procurement Board – the Group Procurement Committee's executive arm consisting of the DZ BANK Group's heads of procurement – and implemented in the procurement units in the DZ BANK Group.

The DZ BANK Group **Heads of Internal Audit working group**, which is led by DZ BANK, coordinates audit issues and activities of relevance to the management of the group based on a jointly developed framework approved by the relevant Boards of Managing Directors. This working group also serves as a platform for sharing specialist information across the group – especially information on current trends in internal audit – and for the ongoing development of Group Audit. On behalf of this working group, the Head of Group Audit reports to the Chief Executive Officer, who is responsible for Group Audit, and – where appropriate – to the Group Coordination Committee.

The **Economic Roundtable**, the members of which comprise the economists from the main group companies, helps the Group Coordination Committee to assess economic and capital market trends, providing a uniform basis for consistent planning scenarios throughout the group, and to prepare risk scenarios required by regulators.

The members of the **Innovation Roundtable** comprise specialists, executive managers, and innovation managers from the various divisions of DZ BANK and the subsidiaries. The Innovation Roundtable is therefore the Group Coordination Committee's key point of contact for information on innovations and trends relevant to the group. The objectives of the Innovation Roundtable are to systematically examine innovation topics with group relevance on an ongoing basis, to bring together the divisions involved in innovation projects, and to ensure that innovation activities in the DZ BANK Group are transparent.

The **Group Sustainability Committee (GSC)** is the central committee that manages the implementation of societal, business-policy, and regulatory requirements relating to sustainability matters in the DZ BANK Group. The GSC also constitutes a platform for sharing information throughout the group and drives the integration of sustainability into core areas. The job of the GSC is to maintain an overview of all sustainability-specific decision-making of relevance to the group, to help the entities in the DZ BANK Group to manage, communicate, and coordinate sustainability matters, and to formulate strategic input. Another task of the GSC is to assist the Group Coordination Committee of the DZ BANK Group in matters of principle. The GSC's members include the Chief Executive Officer of DZ BANK and the members of the Boards of Managing Directors with responsibility for sustainability at DZ BANK and the material subsidiaries. The Heads of Division with relevant responsibility at DZ BANK and in the group entities participate in the GSC as permanent guests in order to represent the members of the Boards of Managing Directors.

### 2.3 Key performance indicators

The KPIs of the DZ BANK Group / DZ BANK financial conglomerate for profitability, volume, and productivity, the regulatory return on risk-adjusted capital (RORAC), and liquidity adequacy and capital adequacy are presented below:

- **Profitability figures in accordance with International Financial Reporting Standards (IFRS):**

The profitability figures (primarily loss allowances for loans and advances, profit/loss before taxes, net profit/loss) are presented in chapters II.3.1 and 3.2 of this group management report as well as in note 32 of the notes to the consolidated financial statements.

- **IFRS volume figures:**

The main volume-related KPIs include equity and total assets. These are set out in chapter II.4 of the group management report, in the consolidated financial statements (balance sheet as at December 31, 2024), and in note 32 of the notes to the consolidated financial statements.

- **Productivity:**

The KPI for productivity is the cost/income ratio. This KPI is described in chapters II.3.1 and 3.2 of this group management report and in note 32 of the notes to the consolidated financial statements.

- **Liquidity adequacy:**

Appropriate levels of liquidity reserves in relation to the risks associated with future payment obligations are demonstrated using the KPIs for economic and regulatory liquidity adequacy presented in chapters VI.6.2 and VI.6.3 of the risk report in this group management report. The minimum liquidity surplus reflects economic liquidity adequacy. Regulatory liquidity adequacy is expressed in terms of the liquidity coverage ratio (LCR) and the net stable funding ratio (NSFR).

- **Capital adequacy:**

The KPIs for economic capital adequacy are described in chapter VI.7.3 of the risk report in this group management report. The KPIs for regulatory capital adequacy are included in chapter VI.7.4. They comprise the coverage ratio for the financial conglomerate, the total capital ratio, the Tier 1 capital ratio, the common equity Tier 1 capital ratio, and the leverage ratio, as well as the metrics for the minimum requirement for own funds and eligible liabilities (MREL), namely the MREL ratio as a percentage of risk-

weighted assets, the MREL ratio as a percentage of the leverage ratio exposure, the subordinated MREL ratio as a percentage of risk-weighted assets, and the subordinated MREL ratio as a percentage of the leverage ratio exposure.

– **Regulatory RORAC:**

Regulatory RORAC is a risk-adjusted performance measure. In the reporting period, it reflected the relationship between profit before taxes and the average own funds for the year (calculated as an average of the monthly figures) in accordance with the own funds/solvency requirements for the financial conglomerate. It therefore shows the return on the regulatory risk capital employed. This KPI is described in chapters II.3.1 and 3.2 of this group management report and in note 32 of the notes to the consolidated financial statements.

Forecasts for the aforementioned KPIs in the DZ BANK Group are set out in the outlook. The DZ BANK Group has also collated various non-financial key performance indicators in order to measure progress on achieving its non-financial targets. These non-financial KPIs are used for internal management purposes only to a limited extent, which is why no further disclosures are provided here. Sustainability-specific metrics are reported in the non-financial statement pursuant to section 315b HGB in chapter VII of the group management report.

## **2.4 Management process**

In the annual strategic planning process, the entities in the DZ BANK Group produce a business strategy (objectives, strategic direction, and action plan), a strategic finance and capital plan, and risk strategies derived from the business strategy.

The planning by the management units is then validated and the plans are also discussed in strategy meetings. When the individual entity planning has been completed, the process then moves on to consolidated group planning, which primarily aims to facilitate active management of the DZ BANK Group's economic and regulatory capital adequacy.

The action plans to attain the targets are discussed in a number of ways, notably in quarterly meetings with the subsidiaries.

At DZ BANK level, the main divisions involved in the strategic planning process are Strategy & Group Development, Group Risk Control & Services, Group Risk Controlling, Group Finance, Bank Finance, and Research and Economics. The planning coordinators in the front-office divisions of DZ BANK and the subsidiaries are also incorporated into the process. The Strategy & Group Development division is responsible for overall coordination of the strategic planning process.

## II Business report

### 1 Economic conditions

In terms of economic output, the German economy fared worse in 2024 than it had in 2023. The wave of inflation and the state of the job market impacted on consumer behavior. Energy costs were high by international comparison, which dampened the business outlook for companies, as did inconsistent economic policy and the growing burden created by increased bureaucracy. Germany's governing 'traffic-light' coalition collapsed in November.

The ebb and flow of economic output continued from quarter to quarter in 2024. The first quarter of 2024 saw an increase in gross domestic product (GDP) of 0.2 percent, but this was followed by a decrease of 0.1 percent in the second quarter. Among the factors acting as a brake on economic growth was expenditure on construction and capital equipment. Construction investment was held back by a rise in construction prices and high interest rates, despite the European Central Bank (ECB) starting to reduce interest rates again in the summer. The German economy also faced headwinds in foreign trade. Exports declined by 0.8 percent over the year as a whole, reflecting the lack of demand from abroad. The poor economic conditions meant that imports were subdued and increased by just 0.2 percent in 2024. However, consumer spending by private households and, in particular, the public sector provided support for the economy.

GDP declined by 0.2 percent in 2024 compared with the previous year. Economic output had contracted by 0.3 percent in 2023, so Germany's economy has been weak for two years in succession.

The economy of the eurozone continued to recover in 2024, although the pace of growth barely picked up. Overall, the eurozone's GDP went up by 0.9 percent year on year in 2024, having risen by 0.5 percent in 2023.

The US economy grew in 2024, with household consumption and capital expenditure picking up. These favorable conditions were thanks to increased consumer spending, waning inflation, and the central bank's interest-rate cuts from September 2024 onward. Government spending also continued to climb. GDP growth over 2024 as a whole amounted to 2.8 percent.

Chinese economic growth came in at exactly the stated target of 5.0 percent in 2024. However, the economy continued to be weighed down by the crisis in the real estate sector, which did not begin to show any signs of easing until the end of the year. This recovery is likely to have been mainly due to government support. Consumer spending remained extremely muted in the year under review. By contrast, healthy exports provided growth impetus. However, sales figures for exports were mainly propped up by price reductions that can only be offered because of high government subsidy levels.

### 2 The financial industry amid continued efforts to stabilize the economy of the eurozone

As had been the case in 2023, geopolitical risks again fueled uncertainty in the capital markets during the reporting year. Nonetheless, the stock markets followed a positive trajectory over the course of 2024.

The STOXX Europe 600, a share index comprising 600 large listed European companies, stood at 507.62 points as at December 31, 2024, which was 28.6 points higher than at the end of the previous year (December 31, 2023: 479.02 points). The index had added 54.13 points in the previous year.

Some EU countries still exceeded the ratios for new and overall indebtedness required for compliance with the stability criteria specified in the Fiscal Compact agreed by the EU member states at the beginning of 2012. In the Fiscal Compact, the signatory countries committed to reducing their debt (as a proportion of GDP) each year by one twentieth of the difference between the debt level and the Maastricht limit of 60 percent of GDP.

At the end of the third quarter of 2024, the total borrowing of the 20 eurozone countries equated to 88.2 percent of their GDP.

Italy's public debt as a percentage of GDP stood at 136.3 percent in the third quarter of 2024, which is the highest in the eurozone after that of Greece.

Based on a policy of quantitative easing, the ECB has been supporting the markets for government bonds since the financial crisis in 2008, thereby creating the necessary time over the last few years for the European Monetary Union (EMU) countries burdened with excessive debt to reduce their budget deficits. By the third quarter of 2022, however, the ECB was pursuing a more restrictive monetary policy.

The following key interest rates were relevant in the year under review. At its meeting on December 14, 2023, the ECB had decided to leave the deposit facility interest rate at 4.00 percent, the main refinancing operations rate at 4.50 percent, and the marginal lending facility rate at 4.75 percent. On June 6, 2024, the ECB Governing Council then decided to lower the ECB's three key rates by 25 basis points each. The deposit facility interest rate was therefore set at 3.75 percent, the main refinancing operations rate at 4.25 percent, and the marginal lending facility rate at 4.50 percent. On September 12, 2024, the ECB reduced the deposit rate by 25 basis points and the rates for main refinancing operations and the marginal lending facility by 60 basis points each. Then on October 17, 2024, the ECB Governing Council decided to lower the key rates for the third time in the year, cutting them by 25 basis points each. The ECB's monetary policy decision on December 12, 2024 saw each of the three rates reduced by a further 25 basis points. The deposit facility interest rate was therefore set at 3.00 percent, the main refinancing operations rate at 3.15 percent, and the marginal lending facility rate at 3.40 percent.

The federal funds rate of the US Federal Reserve (Fed) started the year in a range of 5.25 percent to 5.50 percent. In light of falling inflation in 2024, the Fed cut the rate by 0.50 percentage points in September 2024. This was followed by a further rate cut of 0.25 percentage points in November 2024. On December 18, 2024, the Fed set the range for the federal funds rate at 4.25 percent to 4.50 percent.

Germany's two largest banks both generated an overall net profit in 2024. Whereas one of them registered a considerable increase in net profit and a significant<sup>1</sup> rise in expenses for loss allowances for loans and advances compared with the previous year, the other one saw a sharp decrease in its net profit and, as with the other bank, a significant increase in expenses for loss allowances for loans and advances. Both banks recorded a small rise in administrative expenses in the reporting year.

<sup>1</sup> In the presentation of financial performance in chapters II.2 and II.3 and of net assets in chapter II.4 in the business report and chapters V.2 and V.4 in the outlook of the 2023 group management report, 'significant' was used in the sense of a moderate or tangible change. In this report, 'significant' in the aforementioned chapters means a substantial or considerable change.

### 3 Financial performance

#### 3.1 Financial performance at a glance

Against a backdrop of challenging market conditions fueled by geopolitical crises, the DZ BANK Group posted profit before taxes of €3,303 million in 2024 (2023: €3,189 million).

The year-on-year changes in the key figures that make up the net profit generated by the DZ BANK Group were as described below.

Fig. II. 1 – INCOME STATEMENT

| € million                                                                              | 2024         | 2023         |
|----------------------------------------------------------------------------------------|--------------|--------------|
| Net interest income                                                                    | 4,670        | 4,333        |
| Net fee and commission income                                                          | 3,191        | 2,807        |
| Gains and losses on trading activities                                                 | -842         | -175         |
| Gains and losses on investments                                                        | 65           | -72          |
| Other gains and losses on valuation of financial instruments                           | 229          | 298          |
| Gains and losses from the derecognition of financial assets measured at amortized cost | 40           | 11           |
| Net income from insurance business                                                     | 1,147        | 891          |
| Loss allowances                                                                        | -845         | -362         |
| Administrative expenses                                                                | -4,552       | -4,597       |
| Staff expenses                                                                         | -2,201       | -2,174       |
| Other administrative expenses <sup>1</sup>                                             | -2,351       | -2,423       |
| Other net operating income                                                             | 200          | 56           |
| <b>Profit before taxes</b>                                                             | <b>3,303</b> | <b>3,189</b> |
| Income taxes                                                                           | -913         | -955         |
| <b>Net profit</b>                                                                      | <b>2,390</b> | <b>2,234</b> |

<sup>1</sup> General and administrative expenses plus depreciation/amortization expense.

**Operating income** in the DZ BANK Group amounted to €8,700 million (2023: €8,149 million). This figure comprises net interest income, net fee and commission income, gains and losses on trading activities, gains and losses on investments, other gains and losses on valuation of financial instruments, gains and losses from the derecognition of financial assets measured at amortized cost, net income from insurance business, and other net operating income.

**Net interest income** increased by €337 million year on year to €4,670 million (2023: €4,333 million).

Within this figure, interest income from lending and money market business rose to €12,861 million (2023: €11,423 million) and interest income from bonds and other fixed-income securities advanced to €1,356 million (2023: €916 million). There was a positive change in interest income from portfolio hedges of interest-rate risk (portfolios comprising financial assets), which increased to €1,502 million (2023: €1,405 million), and in interest expense for portfolio hedges of interest-rate risk (portfolios comprising financial liabilities), which declined to €322 million (2023: €421 million).

Interest expense on debt certificates issued including bonds increased to €2,834 million (2023: €1,754 million). This was mainly due to expansion of the portfolio of issued commercial paper. Interest expense for deposits from banks and customers rose to €7,872 million (2023: €7,180 million), partly for volume-related reasons.

**Net fee and commission income** grew by €384 million to €3,191 million (2023: €2,807 million). Net fee and commission income from securities business climbed to €2,609 million (2023: €2,308 million). This was primarily due to increases at UMH in the volume-related income contribution to €2,131 million (2023: €1,849 million) and in performance-related management fees to €42 million (2023: €4 million).

Furthermore, net fee and commission income from payments processing including card processing rose to €173 million (2023: €144 million), that from lending and trust activities to €126 million (2023: €99 million), and that from financial guarantee contracts and loan commitments to €103 million (2023: €84 million).

**Gains and losses on trading activities** amounted to a net loss of €842 million (2023: net loss of €175 million). This change was due to the volatility of market prices, which – as a result of risk management – had opposing effects on gains and losses on non-derivative financial instruments and embedded derivatives on the one hand and on gains and losses on derivatives on the other. Gains and losses on derivatives deteriorated to a net gain of €341 million (2023: net gain of €2,193 million). Conversely, gains and losses on non-derivative financial instruments and embedded derivatives improved to a net loss of €1,331 million (2023: net loss of €2,430 million). The net gain under gains and losses on exchange differences rose to €148 million (2023: net gain of €62 million).

**Gains and losses on investments** stood at a net gain of €65 million (2023: net loss of €72 million). Within this figure, gains and losses on the disposal of bonds and other fixed-income securities improved to a net gain of €16 million (2023: net loss of €36 million). Gains and losses on investments in associates amounted to a net gain of €32 million (2023: net loss of €5 million), which was largely due to gains realized on the sale of two direct equity investments at VR Equitypartner. Gains and losses on investments in joint ventures improved to €1 million (2023: net loss of €28 million) and gains and losses on the disposal of shares and other variable-yield securities to a net gain of €17 million (2023: net loss of €2 million).

**Other gains and losses on valuation of financial instruments** came to a net gain of €229 million (2023: net gain of €298 million). The deterioration is chiefly attributable to the year-on-year decline in the net gain from guarantee commitments of UMH.

Gains and losses on derivatives used for purposes other than trading declined to a net gain of €109 million (2023: net gain of €433 million). By contrast, gains and losses on financial instruments designated as at fair value through profit or loss that are not related to derivatives held for trading purposes improved to a net loss of €11 million (2023: net loss of €162 million), gains and losses from fair value hedge accounting improved to a net gain of €52 million (2023: net loss of €44 million), and gains and losses on financial assets mandatorily measured at fair value through profit or loss improved to a net gain of €80 million (2023: net gain of €71 million).

**Net income from insurance business** comprises the insurance service result, gains and losses on investments held by insurance companies and other insurance company gains and losses, insurance finance income or expenses, and gains and losses from the derecognition of financial assets measured at amortized cost in the insurance business.

In 2024, net income from insurance business increased by €256 million to €1,147 million (2023: €891 million). The increase was primarily due to the improvement – driven by the situation in the capital markets – in gains and losses on investments held by insurance companies and other insurance company gains and losses to a net gain of €5,094 million (2023: net gain of €2,998 million) and the improvement in the insurance service result to a profit of €1,400 million (2023: profit of €1,183 million). By contrast, insurance finance income or expenses deteriorated to a net expense of €5,351 million (2023: net expense of €3,297 million), largely in relation to policyholders' share of investment returns.

There was a net addition to **loss allowances** of €845 million (2023: net addition of €362 million).

The net addition to loss allowances for loans and advances to customers was €729 million (2023: net addition of €374 million). The net addition to other loss allowances for loans and advances (particularly loan commitments and financial guarantee contracts) came to €110 million (2023: net addition of €3 million). The net addition to loss allowances for loans and advances to banks was €4 million (2023: net reversal of €14 million).

**Administrative expenses** went down by €45 million to €4,552 million (2023: €4,597 million). Within this figure, staff expenses advanced to €2,201 million, compared with €2,174 million in 2023. This increase was predominantly due to pay rises and appointments to vacant positions. Other administrative expenses declined to €2,351 million (2023: €2,423 million), largely because there were no longer any contributions to the bank levy.

**Other net operating income** amounted to €200 million (2023: €56 million). Restructuring expenses decreased to €48 million (2023: €94 million). In 2023, these expenses had been dominated by additions to provisions for termination benefits linked with restructuring. Income and expense resulting from impairment losses recognized on other intangible assets, and reversals thereof, improved to a net expense of €7 million (2023: net expense of €53 million). The prior-year figure had largely been influenced by impairment of recognized customer relationships at UMH. By contrast, income from the reversal of provisions and accruals deteriorated to €151 million (2023: €175 million).

**Profit before taxes** for 2024 amounted to €3,303 million, compared with €3,189 million in 2023.

The **cost/income ratio** (i.e. the ratio of administrative expenses to operating income) for the reporting year came to 52.3 percent (2023: 56.4 percent).

The **regulatory return on risk-adjusted capital (RORAC)** was 16.8 percent (2023: 17.1 percent).

**Income taxes** amounted to €913 million in the reporting year (2023: €955 million).

The DZ BANK Group increased its **net profit** to €2,390 million in 2024, compared with a net profit of €2,234 million in 2023.

The following provides an explanation of the above information and the details below (chapter II.3.2) concerning the financial performance of the DZ BANK Group with reference to the corresponding presentation in the outlook for 2024 (chapter IV of the 2023 group management report).

In 2024, the DZ BANK Group generated profit before taxes that was significantly higher than the budgeted figure. Net interest income in the reporting year was considerably higher than expected, which was mainly attributable to an increase in customer business at DZ BANK – CICB, an increased volume of and improved margins in the DZ HYP portfolio, distributions from UMH's own-account investments, a higher average initial yield to maturity in the securities portfolio, and interest on deposits at DZ PRIVATBANK. A slight fall in net fee and commission income had been forecast in 2023, but it actually increased strongly in 2024, primarily due to higher volume-related income. Gains and losses on trading activities deteriorated markedly in the reporting year due to changes in market prices, whereas a significant improvement had been anticipated in 2023. Gains and losses on investments improved sharply in 2024, as had been forecast in 2023. Other gains and losses on valuation of financial instruments deteriorated markedly, returning to a normal level in the year under review, as had been expected in the prior year. Net income from insurance business rose substantially in the reporting year, in line with the budgeted figure. Net additions to loss allowances were considerably higher than had been budgeted for 2024 due to unexpected additions to the specific loan loss allowances. Administrative expenses were largely unchanged in 2024; the projection in the prior year had been for a slight increase. In 2023, other net operating income had been forecast to increase, returning to a normal level, but it actually rose sharply in 2024. The cost/income ratio for the DZ BANK Group in 2024 declined to 52.3 percent (2023: 56.4 percent), whereas a slight increase had been forecast in the prior year. Regulatory RORAC was 16.8 percent in the reporting year (2023: 17.1 percent). It had been predicted to fall sharply.

### 3.2 Financial performance in detail

The following sections describe the details of the financial performance of the DZ BANK Group's operating segments in 2024 compared with 2023.

### 3.2.1 BSH

**Net interest income** in the BSH subgroup decreased by €13 million to €537 million (2023: €550 million).

Interest expense in building society operations (including interest expense on hedges) went down by €72 million to €637 million (2023: €709 million). Within this figure, interest expense for home savings deposits amounted to €584 million (2023: €653 million). The amount for 2024 included additions to provisions relating to building society operations of €217 million (2023: €217 million) and a sum of €366 million (2023: €434 million) attributable to the interest rates applicable to current tariffs. The interest-rate swaps used to manage interest income and expense in the context of portfolio fair value hedge accounting in assets-side and liabilities-side business reduced net interest income by a total of €45 million (2023: €47 million).

In the case of loans issued under advance or interim financing arrangements and other building loans, income amounted to €1,075 million (2023: €1,070 million). Income from home savings loans amounted to €137 million (2023: €98 million).

Interest income arising on investments fell by €58 million to €303 million (2023: €361 million). Interest expense for borrowing increased by €82 million to €172 million (2023: €90 million, which had included income of €55 million from the early redemption of promissory notes issued by BSH ).

BSH incorporates the fees, commissions, and transaction costs directly assignable to the acquisition of home savings contracts and loan agreements into the effective interest method applied to home savings deposits and building loans. In the reporting year, this decreased net interest income by €184 million (2023: €199 million). Of this sum, €77 million was attributable to home savings deposits (2023: €94 million) and €107 million to building loans (2023: €105 million).

**Net fee and commission income** amounted to a net expense of €14 million (2023: net expense of €13 million). New home savings business and new home finance business are the main drivers of net fee and commission income.

In the home savings business in 2024, BSH entered into approximately 426 thousand (2023: 459 thousand) new home savings contracts with a volume of €28.1 billion (2023: €31.0 billion) in Germany.

In the home finance business, the realized volume of new business came to €9.0 billion (2023: €9.2 billion) in Germany.

**Loss allowances** amounted to a net addition of €24 million (2023: net addition of €18 million).

**Administrative expenses** went down by €45 million to €491 million (2023: €536 million). Of the total decrease, €37 million overall was attributable to the sale of the subsidiary Fundamenta-Lakáskassza Lakástakarékpénztár Zrt. (FLK) at the end of the first quarter of 2024. At €253 million, staff expenses in the BSH subgroup were €30 million lower than the prior-year level of €283 million. The decrease was primarily due to the effect of €20 million on the amount of the defined benefit obligations resulting from the capitalization option granted to employees, and to the effect of €16 million from the aforementioned sale of FLK. Salary increases of €6 million had the opposite effect on this line item.

Other administrative expenses declined by €15 million to €238 million (2023: €253 million), largely owing to the effect of €21 million from the sale of FLK, the absence of the bank levy, and a reduction in expenses for property costs and occupancy costs. By contrast, IT costs went up by €10 million.

**Other net operating income** increased by €22 million to €60 million (2023: €38 million). The change was mainly attributable to the reversal of provisions outside the lending business.

**Profit before taxes** improved by €44 million to €64 million (2023: €20 million) because of the changes described above.

The **cost/income ratio** in 2024 was 84.8 percent (2023: 93.4 percent).

**Regulatory RORAC** was 5.1 percent (2023: 1.6 percent).

### 3.2.2 R+V

The **insurance service result** amounted to a profit of €1,371 million (2023: profit of €1,162 million). This figure included insurance revenue amounting to €12,165 million (2023: €11,578 million) and insurance service expenses of €10,577 million (2023: €10,339 million). Net expenses from reinsurance contracts held stood at €217 million (2023: €78 million).

In the life and health insurance business, insurance revenue amounted to €2,529 million (2023: €2,296 million). The premiums received amounted to €9,134 million (2023: €8,530 million). Besides the premiums, insurance revenue from insurance contracts issued included income of €308 million (2023: €273 million) from the amortization of the contractual service margin. The contractual service margin increased to €5,823 million in 2024 (2023: €5,143 million). This was due to the updating of the contractual service margin and, in particular, to the level of new business in unit-linked life insurance and in private supplementary health insurance calculated on a basis similar to that for non-life insurance. The release of the risk adjustment gave rise to income of €74 million (2023: €53 million). The amortization of insurance acquisition cash flows of €411 million (2023: €377 million) was matched by insurance service expenses in the same amount. Insurance service expenses amounted to €1,893 million (2023: €2,028 million). Of this sum, €1,498 million (2023: €1,686 million) was attributable to incurred claims and changes in fulfillment cash flows relating to the liability for incurred claims and €411 million (2023: €377 million) to the amortization of insurance acquisition cash flows reported under insurance revenue from insurance contracts issued. The change in onerous business came to an expense of €16 million in 2024 (2023: €35 million). The loss component for the portfolio of conventional life insurance fell from €21 million to €16 million in the German insurance business and from €53 million to €44 million in the Italian insurance business. Net expenses from reinsurance contracts held in this business stood at €5 million (2023: €0 million).

In the non-life insurance business, insurance revenue amounted to €7,598 million (2023: €7,246 million). The main influence on this revenue was premiums earned on portfolios measured under the premium allocation approach. The insurance service expenses of the non-life insurance business stood at €7,056 million (2023: €6,887 million). Of this sum, €5,254 million (2023: €5,104 million) was attributable to expenses for claims, comprising payments for claims of €5,215 million (2023: €4,980 million) and the change in the liability for incurred claims amounting to a decrease of €40 million (2023: decrease of €124 million). It also included the change in losses on insurance contracts, which amounted to a decrease of €40 million (2023: decrease of €119 million). Other insurance service expenses included insurance acquisition cash flows and administration costs and totaled €1,762 million (2023: €1,664 million). Net expenses from reinsurance contracts held in this business came to €158 million (2023: €63 million). The combined ratio (gross), which is the ratio of insurance service expenses to insurance revenue, stood at 92.86 percent (2023: 95.04 percent). The combined ratio was better in 2024 than it had been in 2023, when it had been heavily influenced by inflation. Incurred claims from natural disasters came to a total of €217 million in 2024 (2023: €234 million).

Insurance revenue in the inward reinsurance business amounted to €2,038 million (2023: €2,036 million). This included not only premium income but also amortization of the contractual service margin in an amount of €271 million (2023: €231 million) under the general measurement model. Insurance service expenses came to €1,628 million (2023: €1,424 million). Net expenses from reinsurance contracts totaled €54 million (2024: €15 million). The combined ratio increased in 2024 following a very good prior year. Major incurred claims from natural disasters remained on a par with the prior year at €266 million in total in 2024 (2023: €279 million).

**Gains and losses on investments held by insurance companies and other insurance company gains and losses** improved by €2,074 million to a net gain of €5,210 million (2023: net gain of €3,136 million).

Long-term interest rates were lower than in 2023. The ten-year Bund/swap rate was 2.36 percent as at December 31, 2024 (December 31, 2023: 2.49 percent). Spreads on interest-bearing securities largely narrowed during the reporting year and had a similarly positive overall impact on gains and losses on investments held by insurance companies and other insurance company gains and losses as in the previous year, when spreads had narrowed. A weighted spread calculated in accordance with R+V's portfolio structure stood at 65.2 points as at December 31, 2024 (December 31, 2023: 77.0 points). In the comparative period, this spread had fallen from 89.8 points as at December 31, 2022 to 77.0 points as at December 31, 2023.

During the reporting year, equity markets relevant to R+V performed well. For example, the EURO STOXX 50, a share index comprising 50 large, listed companies in the eurozone, saw a rise of 374 points from the start of 2024, closing the year under review on 4,896 points (December 31, 2023: 4,522 points). The index had added 728 points in 2023.

In the reporting year, movements in exchange rates between the euro and various currencies were generally favorable. For example, the US dollar/euro exchange rate on December 31, 2024 was 0.9657 compared with 0.9053 as at December 31, 2023. In the previous year, the exchange rate had moved from 0.9370 as at December 31, 2022 to 0.9053 as at December 31, 2023.

These trends resulted in a €1,010 million positive change – resulting from the effects of changes in positive fair values – in unrealized gains and losses to a net gain of €2,925 million (2023: net gain of €1,915 million), a €937 million improvement in foreign exchange gains and losses to a net gain of €654 million (2023: net loss of €282 million), a €507 million rise in net income under current income and expense to €2,930 million (2023: €2,423 million), and a €111 million improvement in the balance of depreciation, amortization, impairment losses, and reversals of impairment losses to a net expense of €124 million (2023: net expense of €234 million). However, the contribution to earnings from the derecognition of investments deteriorated by €277 million to a loss of €532 million (2023: loss of €255 million). Furthermore, other non-insurance gains and losses declined by €214 million to a net loss of €643 million (2023: net loss of €429 million). The decline in other non-insurance gains and losses related, firstly, to effects from a change in the scope of consolidation resulting from the liquidation of special funds (net loss of €128 million), which was more than offset, however, by countervailing effects in other items of gains and losses on investments held by insurance companies. Secondly, there were higher foreign exchange losses of €107 million that are not attributable to financial instruments and are therefore not reported under foreign exchange gains and losses on investments held by insurance companies.

The positive trend in gains and losses on investments held by insurance companies was offset to an extent by the deterioration in insurance finance income or expenses.

**Insurance finance income or expenses** deteriorated by €2,054 million to a net expense of €5,351 million (2023: net expense of €3,297 million). In the life and health insurance business, this line item deteriorated to a net expense of €4,945 million (2023: net expense of €2,995 million), which was mainly due to the aforementioned compensatory effect. Insurance finance income or expenses came to a net expense of €256 million in the non-life insurance business (2023: net expense of €187 million) and a net expense of €149 million in inward reinsurance (2023: net expense of €115 million). The amount within insurance finance income or expenses relating to discounting at the discount rate used at initial measurement (locked-in discount rate) was a net expense of €191 million in non-life insurance (2023: net expense of €125 million) and a net expense of €149 million in inward reinsurance (2023: net expense of €115 million).

The factors described above resulted in an increase in **profit before taxes** to €1,240 million (2023: €1,008 million).

**Regulatory RORAC** was 13.0 percent (2023: 11.3 percent).

### 3.2.3 TeamBank

**Net interest income** amounted to €534 million and thus improved by €4 million year on year (2023: €530 million). Average loans and advances to customers increased in the reporting year to stand at €9,811 million (2023: €9,675 million).

As at December 31, 2024, loans and advances to customers stood at €9,854 million (December 31, 2023: €9,768 million). The number of customers rose to 1,071 thousand (December 31, 2023: 1,039 thousand). As at December 31, 2024, TeamBank was working with 623 (December 31, 2023: 640) of Germany's 662 (December 31, 2023: 690) cooperative banks and with 166 (December 31, 2023: 152) partner banks in Austria.

**Net fee and commission income** improved by €2 million to a net expense of €37 million (2023: net expense of €39 million), mainly owing to lower expenses for bonuses paid to partner banks.

The net addition to **loss allowances** amounted to €205 million (2023: net addition of €133 million). Rating downgrades in the portfolios due to customers' poorer payment history, as well as a further deterioration in macroeconomic factors, led to the year-on-year rise in loss allowances.

**Administrative expenses** amounted to €283 million (2023: €285 million). Within this figure, staff expenses totaled €106 million (2023: €106 million) and other administrative expenses came to €177 million (2023: €179 million).

**Profit before taxes** stood at €23 million and was thus down by €58 million compared with the prior-year figure of €81 million amid challenging market conditions and a difficult risk situation.

TeamBank's **cost/income ratio** in 2024 was 55.5 percent (2023: 57.1 percent).

**Regulatory RORAC** was 4.4 percent (2023: 16.3 percent).

### 3.2.4 UMH

**Net interest income** swelled to €101 million (2023: €71 million), predominantly due to distributions from own-account investments of €65 million (2023: €43 million).

**Net fee and commission income** improved by €291 million to €2,309 million (2023: €2,018 million). This total included the volume-related income contribution of €2,131 million (2023: €1,849 million), performance-related management fees of €42 million (2023: €4 million), and income of €55 million from transaction fees for properties in Union Investment's real estate funds (2023: €52 million). Expenses for the performance bonus for sales partners increased to €90 million (2023: €57 million).

The change in net fee and commission income was predominantly due to the factors described below.

The average assets under management totaled €484.8 billion (2023: €431.1 billion).

Union Investment generated net inflows from its retail business of €12.6 billion (2023: €12.2 billion) in collaboration with the local cooperative banks.

The number of traditional fund-linked savings plans, which are used by retail customers as investments aimed at long-term capital accumulation, stood at 3.9 million contracts as at December 31, 2024 (December 31, 2023: 3.7 million), with an increase in the 12-month savings volume to €7.0 billion (December 31, 2023: €6.4 billion).

The total assets in the portfolio of Riester pension products amounted to €32.0 billion (December 31, 2023: €26.6 billion).

In its institutional business, Union Investment recorded net inflows of €4.7 billion (2023: €4.6 billion).

The portfolio volume of funds managed by Union Investment that conform with article 8 or article 9 of the EU Sustainable Finance Disclosure Regulation (SFDR) amounted to €146.6 billion (December 31, 2023: €128.7 billion). As at December 31, 2024, this figure included €127.1 billion in assets defined as sustainable by Union Investment based on its own criteria (December 31, 2023: €90.6 billion).

**Gains and losses on investments** improved to a net gain of €14 million (2023: net loss of €31 million). The net gain on valuation of an equity-accounted joint venture came to €1 million (2023: net loss of €28 million) and the net gain realized on the disposal of investment fund units from own-account investments of Union Investment came to €13 million (2023: net loss of €2 million).

The net gain under **other gains and losses on valuation of financial instruments** declined to €85 million (2023: €197 million), which was largely attributable to the net gain of €37 million on the valuation of guarantee commitments (2023: net gain of €143 million), with a net gain of €48 million arising on the valuation of Union Investment's own-account investments (2023: net gain of €54 million).

**Administrative expenses** went up by €32 million to €1,263 million (2023: €1,231 million). Staff expenses increased by €5 million to €600 million (2023: €595 million) owing to higher average pay and appointments to new and vacant posts. Other administrative expenses climbed by €27 million to €663 million (2023: €636 million), mainly because of higher expenses incurred in connection with IT, consultancy, public relations, and marketing.

**Other net operating income** amounted to a net loss of €6 million (2023: net loss of €50 million). This improvement was mainly because other net operating income in the prior year had included impairment losses on recognized customer relationships.

Based on the changes described above, **profit before taxes** increased by €267 million to €1,241 million (2023: €974 million).

The **cost/income ratio** in 2024 was 50.5 percent (2023: 55.8 percent).

**Regulatory RORAC** was greater than 100.0 percent (2023: greater than 100.0 percent).

### 3.2.5 DZ BANK – CICB

**Net interest income** is primarily attributable to the lending business portfolios (Corporate Banking business line), the portfolios from the capital markets business (including the portfolios of Group Treasury), and the long-term equity investments allocated to the central institution and corporate bank. Net interest income increased by €69 million to €1,552 million (2023: €1,483 million).

In the Corporate Banking business line, net interest income rose by €37 million to €593 million (2023: €556 million). The net interest income in the four regional corporate customer divisions plus Central Corporate Banking increased to €341 million (2023: €320 million). The rise in net interest income was attributable to the higher lending volume.

Net interest income in the Structured Finance division amounted to €182 million, an increase of €15 million compared with the prior-year figure of €167 million. This increase was largely due to successful business activities with German and foreign customers in conjunction with an increased volume of lending.

In the Investment Promotion division, net interest income advanced by €1 million to €70 million (2023: €69 million). The year-on-year rise was due mainly to a slightly higher average loan portfolio.

Net interest income from money market and capital markets business increased by €29 million to €887 million (2023: €858 million). This increase was firstly attributable to the deposit-taking operating business in the short-dated maturity segment. Secondly, the rise in interest rates in the money market led to increased net interest income from the investment of liquidity from the excess of non-interest-bearing liabilities (e.g. equity) over non-interest-bearing assets.

Other net interest income from loan administration fees rose by €4 million to €29 million (2023: €25 million).

Income from profit-pooling, profit-transfer, and partial profit-transfer agreements, together with income from other shareholdings and current income from investments in subsidiaries, was on a par with the prior year at €43 million (2023: €44 million).

**Net fee and commission income** went up by €88 million to €632 million (2023: €544 million).

The principal sources of income were service fees in the Corporate Banking business line (in particular, from lending business including guarantees and international business), in the Capital Markets business line (mainly from securities issuance and brokerage business, agents' fees, transactions on futures and options exchanges, financial services, and the provision of information), and in the Transaction Banking business line (primarily from payments processing including credit card processing, and safe custody).

In the Corporate Banking business line, net fee and commission income was €23 million higher than in the previous year at €222 million (2023: €199 million). One of the main reasons for this was the increase of €23 million in fees and commissions in connection with loan processing.

In the Capital Markets business line, the contribution to net fee and commission income rose by €36 million to €250 million (2023: €214 million). The main factors in this increase were the rise in transaction fees of €19 million from the securitization business and of €19 million from the securities business.

Net fee and commission income in the Transaction Banking business line rose by €28 million to €204 million (2023: €176 million). This was mainly due to lower expenses paid under the service procurement agreement with equensWorldline SE as a result of the insourcing of payments processing at DZ BANK in the course of 2024.

As part of service procurement arrangements, DZ BANK has outsourced processing services in the payments processing business to equensWorldline SE and Cash Logistik Security AG, and in securities business to Deutsche WertpapierService Bank AG. The expenses arising in connection with obtaining services from the above external processing companies amounted to a total of €181 million (2023: €217 million) and were reported under the net fee and commission income of the Transaction Banking business line.

**Gains and losses on trading activities** amounted to a net gain of €7 million (2023: net gain of €674 million).

Gains and losses on trading activities reflect the business activity of the Capital Markets business line and gains and losses on money market business entered into for trading purposes and on derivatives of the Group Treasury division ('financial assets and liabilities measured at fair value through profit or loss' [fair value PL]). The fair value gains and losses on financial assets and liabilities designated as at fair value through profit or loss (fair value option) are – apart from credit rating effects – also included in gains and losses on trading activities. The credit-rating-related effects pertaining to these financial instruments are included in other gains and losses on valuation of financial instruments if the instruments are financial assets or in equity if the instruments are financial liabilities.

Gains and losses on operating trading activities in the Capital Markets business line amounted to a net gain of €495 million, compared with €595 million in 2023. The decline stemmed from fixed-income trading and interest-rate trading.

IFRS rules on the recognition and measurement of financial instruments can affect the recognition of the bank's internal model for managing market risk and the recognition of income from the operating business in the income statement. These include accounting mismatches that arise when a different basis has been used to measure assets or liabilities or to recognize gains and losses. This means that, in some circumstances, effects cannot be recognized in the same period and, instead, are only recognized correctly in the income statement if the whole term of the affected transactions is considered. IFRS rules can also result in income being recognized in different income items (e.g. net interest income). For internal management purposes, these effects are referred to as 'non-operational, IFRS-related effects'. These effects can have a material impact on the level of gains and losses on trading activities, primarily due to movements in interest rates and spreads (on own issues). In 2024, these effects led to a deterioration of €567 million in gains and losses on trading activities. A partly corresponding positive impact was recognized in other gains and losses on valuation of financial instruments in the period under review.

**Gains and losses on investments** improved by €54 million to a net gain of €12 million (2023: net loss of €42 million). The net gain in the reporting year resulted from income of €25 million (2023: €170 million) from the unwinding of hedges accounted for in the category 'fair value through other comprehensive income' in the context of portfolio fair value hedge accounting, combined with losses of €12 million (2023: €211 million) arising from the sale of securities in the category 'financial assets measured at fair value through other comprehensive income' (fair value OCI). Securities in the category 'fair value through profit or loss' generated a net gain of €2 million (2023: €5 million), which was virtually outweighed by valuation losses of €3 million on shares in fully consolidated subsidiaries.

**Other gains and losses on valuation of financial instruments** improved to a net gain of €134 million (2023: net loss of €93 million). Within this figure, credit-risk-related measurement effects relating to financial assets measured using the fair value option improved by €122 million to a net gain of €66 million (2023: net loss of €56 million) and there was a net gain from ineffectiveness in hedge accounting of €52 million, which represented an improvement of €93 million compared with the net loss of €41 million recorded in the prior year. Gains and losses on valuation of financial instruments measured at fair value through profit or loss improved by €13 million to a net gain of €16 million (2023: net gain of €3 million).

**Gains and losses from the derecognition of financial assets measured at amortized cost** improved by €78 million year on year to a net gain of €43 million (2023: net loss of €35 million).

**Loss allowances** amounted to a net addition of €457 million (2023: net addition of €82 million). Of this total, net reversals of €8 million (2023: net reversals of €55 million) related to loss allowances in stage 1, net additions of €73 million (2023: net additions of €62 million) related to loss allowances in stage 2, and net additions of €392 million (2023: net additions of €75 million) related to loss allowances in stage 3. The net additions in stage 3 comprised net additions in the lending business and in respect of investments of €439 million. This item also contained the net loss of €28 million on purchased or originated credit-impaired assets (POCI assets) and other income from loss allowances of €75 million.

The net additions of €65 million in stages 1 and 2 in 2024 were attributable, in particular, to parameter adjustments in the context of the calculation of parameter-based loss allowances, macroeconomic changes, and changes in the portfolio. Furthermore, loss allowances were increased in stage 3 owing to additions in respect of individual counterparties following changes in credit ratings. These were partly offset by reversals as a result of improvements in the credit ratings of some counterparties.

**Administrative expenses** went down by €3 million to €1,452 million (2023: €1,455 million).

Staff expenses went up by €31 million to €707 million (2023: €676 million) on the back of higher wages and salaries – and thus higher social security expenses – resulting from an increase in the number of employees.

Other administrative expenses dropped by €34 million to €745 million (2023: €779 million). The decrease arose mainly because there were no longer any expenses for the restructuring fund for banks (bank levy).

**Other net operating income** decreased by €44 million to a net expense of €3 million (2023: net income of €41 million). This item included income from the reversal of provisions and accruals of €39 million (2023: income of €112 million) and expenses of €17 million (2023: expenses of €49 million) for restructuring provisions.

**Profit before taxes** amounted to €468 million in the reporting year, which was €567 million lower than the figure of €1,035 million reported for 2023.

The **cost/income ratio** in 2024 was 61.1 percent (2023: 56.6 percent).

**Regulatory RORAC** was 8.2 percent (2023: 18.9 percent).

### 3.2.6 DZ HYP

At €795 million, the **net interest income** of DZ HYP was up by €74 million year on year (2023: €721 million). One of the drivers of net interest income was the higher volume of real estate loans, which advanced by €646 million to €57,548 million as at December 31, 2024 (December 31, 2023: €56,902 million). The related margins improved year on year. The derivatives used to manage interest income and expense in the context of hedge accounting also had an effect on net interest income.

The volume of new business (including public-sector finance) stood at €9,498 million (2023: €8,627 million). In the corporate customer business, the volume of new business came to €7,221 million (2023: €7,439 million). In the retail customer business, the volume of new commitments amounted to €1,509 million (2023: €753 million). In the public-sector business, DZ HYP generated a new business volume of €768 million (2023: €435 million).

The volume of new lending jointly generated with the local cooperative banks in the corporate customer business amounted to €2,726 million in 2024 (2023: €2,552 million).

**Net fee and commission income** stood at €6 million (2023: €9 million).

**Other gains and losses on valuation of financial instruments** declined by €95 million to a net loss of €8 million (2023: net gain of €87 million). This was largely attributable to the net loss of €78 million on the valuation of financial instruments measured at fair value (2023: net gain of €5 million) and liquidity-spread-related valuation effects on own issues of €68 million (2023: €77 million). Moreover, the movement of credit spreads on bonds from eurozone periphery countries resulted in a contribution to earnings of €4 million (2023: €8 million).

**Loss allowances** amounted to a net addition of €90 million (2023: net addition of €111 million). In 2024, additions in stage 3 in connection with specific material exposures were lower than in the prior year.

**Administrative expenses** decreased to €246 million (2023: €247 million). Staff expenses increased to €117 million (2023: €111 million), mainly as a result of headcount growth and higher provisions for pensions and other post-employment benefits. Other administrative expenses declined to €128 million (2023: €136 million), largely because there were no longer any expenses for the bank levy. The rise in costs for IT, auditing, and consultancy had a countervailing effect on this item.

**Profit before taxes** in 2024 advanced to €479 million (2023: €476 million).

The **cost/income ratio** was 30.1 percent (2023: 29.6 percent).

**Regulatory RORAC** was 34.9 percent (2023: 35.2 percent).

### 3.2.7 DZ PRIVATBANK

The **net interest income** of DZ PRIVATBANK rose by €29 million to €176 million (2023: €147 million), primarily thanks to the higher average initial yield to maturity in the securities portfolio and an increase in interest income in connection with deposit-taking business in the fund services business and private banking.

**Net fee and commission income** went up by €15 million to €235 million (2023: €220 million). Contributions to earnings in the fund services business and private banking are the main drivers of net fee and commission income.

The value of funds under management amounted to €161.8 billion as at December 31, 2024 (December 31, 2023: €188.7 billion). The number of fund-related mandates was 572 (December 31, 2023: 582).

As at December 31, 2024, high-net-worth individuals' assets under management, which comprise the volume of securities, derivatives, and deposits of customers in the private banking business, came to €26.1 billion (December 31, 2023: €23.4 billion).

**Other gains and losses on valuation of financial instruments** deteriorated by €41 million to a net loss of €24 million (2023: net gain of €17 million), predominantly due to liquidity-spread-related negative valuation effects on own issues measured using the fair value option.

The net addition to **loss allowances** went up by €16 million to €17 million (2023: net addition of €1 million) due to the exposures subject to sanctions (the settlement of securities and dividend payments in Russian rubles in connection with depository services) being transferred to stage 3 (default), along with full risk provisioning. The corresponding liabilities were also remeasured, which meant there was largely no impact on profit or loss (see also the information on other net operating income).

**Administrative expenses** amounted to €295 million (2023: €293 million). At €175 million, staff expenses were higher than the prior-year figure of €166 million, partly due to the increase in the number of employees in connection with the expansion of business. Other administrative expenses declined to €119 million (2023: €126 million), mainly because there were no longer any contributions to the bank levy.

**Other net operating income** improved to net income of €16 million (2023: net loss of €16 million), chiefly as a result of the remeasurement of investment fund liabilities that are related to exposures in Russian rubles subject to sanctions. In 2023, other net operating income had been adversely affected by expenses of €18 million from the recognition of a provision for restructuring.

Because of the changes described above, **profit before taxes** increased by €29 million to €112 million (2023: €83 million).

The **cost/income ratio** was 69.7 percent (2023: 77.7 percent).

**Regulatory RORAC** was 32.0 percent (2023: 25.3 percent).

### 3.2.8 VR Smart Finanz

**Net interest income** at VR Smart Finanz amounted to €141 million (2023: €123 million). The increase in net interest income was due to higher net margins and, in particular, a year-on-year rise of 3.2 percent in the lending and object finance portfolio volume – primarily in connection with the 'VR Smart flexibel' and 'VR Smart express' focus products – to a total of €3,102 million (December 31, 2023: €3,007 million).

New lending and object finance business with customers in the small business, self-employed, and SME segments was encouraging in 2024, increasing by 2.6 percent year on year to €1,238 million. This trend was mainly driven by higher demand for liquidity from customers in the small business, self-employed, and SME segments, which meant that new business involving the 'VR Smart flexibel' business loan swelled to €630 million (2023: €471 million). By contrast, companies showed little willingness to invest in 2024. Consequently, the volume of new business involving 'VR Smart express', the automated hire purchase solution for assets with a value of up to €250 thousand, declined to €457 million (2023: €516 million). Other new leasing and hire purchase business decreased to €152 million (2023: €222 million).

**Net fee and commission income** deteriorated by €6 million to a net expense of €35 million (2023: net expense of €29 million), largely because of the increase in the fees and commissions paid to the local cooperative banks.

**Loss allowances** in 2024 amounted to a net addition of €52 million (2023: net addition of €18 million). The growth of expenses was mainly due to increased credit risk as a result of the ongoing weakness of the economy.

**Administrative expenses** rose to €78 million (2023: €73 million), the main reason being inflation. Staff expenses came to €46 million (2023: €44 million). Other administrative expenses amounted to €32 million (2023: €29 million).

VR Smart Finanz incurred a **loss before taxes** of €23 million (2023: profit of €1 million).

The **cost/income ratio** in 2024 was 73.6 percent (2023: 79.3 percent).

**Regulatory RORAC** was minus 14.0 percent (2023: 0.7 percent).

### 3.2.9 DZ BANK – holding function

**Net interest income** contains the interest expense on subordinated capital and senior non-preferred paper purchased by group entities as well as on issued subordinated capital and senior non-preferred paper. It also contains the net interest income/expense resulting from obtaining liquidity from the excess of non-interest-bearing assets (e.g. long-term equity investments) over non-interest-bearing liabilities.

Net interest income amounted to a net expense of €158 million in the reporting year (2023: net expense of €103 million).

The net interest expense on purchased and issued subordinated capital and senior non-preferred paper amounted to €71 million (2023: €69 million).

The net interest expense resulting from obtaining liquidity from the excess of non-interest-bearing assets over non-interest-bearing liabilities amounted to €87 million in the year under review (2023: €34 million). The deterioration was due to higher market interest rates in the short-dated segment.

**Administrative expenses** went down by €38 million year on year to €215 million (2023: €253 million).

The protection levies (in particular the bank levy and contributions to the BVR protection scheme) declined by €19 million to €30 million (2023: €49 million) as there were no longer any expenses for the restructuring fund for banks (bank levy). IT and project expenses decreased from €93 million in 2023 to €83 million in 2024. Expenses from the group management function fell by €8 million to €70 million (2023: €78 million). Other expenses for the benefit of the group and local cooperative banks were on a par with the prior year at €32 million (2023: €33 million).

### 3.2.10 Other/Consolidation

The consolidation-related adjustments shown under Other/Consolidation to reconcile operating segment profit/loss before taxes to consolidated profit/loss before taxes are attributable to the elimination of intragroup transactions and to the fact that investments in joint ventures and associates are accounted for using the equity method. Differences between the figures in internal management reporting and those reported in the consolidated financial statements that arise from the recognition of internal transactions in the DZ BANK – CICB operating segment are also eliminated.

The adjustments to net interest income were primarily the result of the elimination of intragroup dividend payments and profit distributions in connection with intragroup liabilities to dormant partners and were also attributable to the early redemption of issued bonds and commercial paper that had been acquired by entities in the DZ BANK Group other than the issuer. Internal transactions in the DZ BANK – CICB operating segment were also eliminated in net interest income and with offsetting entries under gains and losses on trading activities.

The figure under Other/Consolidation for net fee and commission income largely relates to the fee and commission business of TeamBank and the BSH subgroup with the R+V subgroup.

The remaining adjustments are mostly also attributable to the consolidation of income and expenses.

## 4 Net assets

As at December 31, 2024, the DZ BANK Group's **total assets** had increased to €659,638 million (December 31, 2023: €644,589 million).

The **volume of business** amounted to €1,258,111 million (December 31, 2023: €1,195,012 million). This figure comprised the total assets, the assets under management at UMH as at December 31, 2024 amounting to €504,707 million (December 31, 2023: €455,152 million), the financial guarantee contracts and loan commitments amounting to €92,163 million (December 31, 2023: €93,327 million), and the volume of trust activities amounting to €1,603 million (December 31, 2023: €1,944 million).

**Cash and cash equivalents** declined to €81,790 million (December 31, 2023: €101,830 million). The decrease was predominantly attributable to DZ BANK – CICB (liquidity management function).

**Loans and advances to banks** rose to €143,532 million (December 31, 2023: €128,867 million). Loans and advances to banks in Germany swelled to €127,867 million (December 31, 2023: €122,502 million). This total comprised loans and advances to affiliated banks of €117,967 million (December 31, 2023: €117,984 million) and loans and advances to other banks of €9,900 million (December 31, 2023: €4,519 million). Loans and advances to foreign banks increased to €15,665 million (December 31, 2023: €6,364 million).

**Loans and advances to customers** amounted to €208,688 million, which was higher than the figure of €204,776 million reported as at December 31, 2023. Loans and advances to customers in Germany grew to €178,565 million (December 31, 2023: €178,389 million), while loans and advances to foreign customers rose to €30,123 million (December 31, 2023: €26,388 million).

**Financial assets held for trading** amounted to €30,441 million (December 31, 2023: €34,961 million). Within this amount, derivatives (positive fair values) stood at €16,231 million (December 31, 2023: €16,482 million), bonds and other fixed-income securities at €10,441 million (December 31, 2023: €8,334 million), shares and other variable-yield securities at €2,102 million (December 31, 2023: €1,329 million), money market placements at €680 million (December 31, 2023: €7,815 million), and promissory notes and registered bonds at €986 million (December 31, 2023: €1,000 million).

**Investments** rose to €62,049 million (December 31, 2023: €47,970 million). The main reasons for this change were an increase in bonds and other fixed-income securities to €58,076 million (December 31, 2023: €44,453 million) and an increase in shares and other variable-yield securities to €3,184 million (December 31, 2023: €2,880 million).

**Investments held by insurance companies** grew to €122,625 million (December 31, 2023: €115,568 million). This was due to a rise in assets related to unit-linked contracts to €24,859 million (December 31, 2023: €20,563 million), in fixed-income securities to €55,403 million (December 31, 2023: €53,647 million), in mortgage loans to €12,685 million (December 31, 2023: €12,008 million), and in variable-yield securities to €12,257 million (December 31, 2023: €11,871 million).

**Deposits from banks** rose to €187,526 million as at December 31, 2024 (December 31, 2023: €176,594 million) due, in particular, to increased money market deposits. Deposits from domestic banks advanced to €164,066 million (December 31, 2023: €158,901 million) and deposits from foreign banks increased to €23,459 million (December 31, 2023: €17,694 million).

**Deposits from customers** declined to €154,103 million (December 31, 2023: €157,627 million). Deposits from domestic customers shrank to €133,575 million (December 31, 2023: €134,754 million), while deposits from foreign customers fell to €20,528 million (December 31, 2023: €22,874 million).

At the end of the reporting year, the carrying amount of **debt certificates issued including bonds** was €109,810 million (December 31, 2023: €103,768 million), predominantly because of a rise in commercial paper and increased issues of mortgage Pfandbriefe. Within the total figure, the portfolio of bonds issued came to €88,139 million (December 31, 2023: €88,011 million), while the portfolio of other debt certificates issued stood at €21,672 million (December 31, 2023: €15,757 million). As was also the case as at December 31, 2023, all other debt certificates issued are commercial paper.

**Financial liabilities held for trading** declined to €42,234 million (December 31, 2023: €47,675 million). Within this figure, derivatives (negative fair values) decreased to €14,997 million (December 31, 2023: €17,131 million) and money market deposits to €3,754 million (December 31, 2023: €8,854 million). However, bonds issued grew to €20,961 million (December 31, 2023: €20,836 million) and short positions to €2,379 million (December 31, 2023: €701 million).

**Insurance contract liabilities** increased to €111,340 million (December 31, 2023: €105,151 million). This was predominantly due to the rise in the liability for remaining coverage to €98,482 million (December 31, 2023: €93,033 million).

As at December 31, 2024, **equity** had advanced to €32,578 million (December 31, 2023: €31,069 million). The increase was mainly due to growth in retained earnings to €17,673 million (December 31, 2023: €15,977 million). The reserve from other comprehensive income amounted to minus €902 million (December 31, 2023: minus €642 million).

The **capital adequacy** of the DZ BANK financial conglomerate, the DZ BANK banking group, and the R+V Versicherung AG insurance group is described in the risk report within this group management report (chapter VI.7).

## 5 Financial position

DZ BANK distinguishes between **strategic and operational liquidity management**. Strategic liquidity management is carried out by the Asset/Liability Committee (ALCo), thereby creating the framework for operational liquidity management. The ALCo ensures that the financial targets of the DZ BANK Group are consistently achieved and that the central institution function within the Volksbanken Raiffeisenbanken Cooperative Financial Network is assured.

At DZ BANK, operational liquidity management is carried out centrally by the Group Treasury division in Frankfurt and by the associated treasury units in its international branches, although Frankfurt has primary responsibility. For the DZ BANK Group, operational liquidity management is carried out on a decentralized basis in the individual subsidiaries. The individual entities are provided with funding by DZ BANK (group funding) or the entities exchange cash among themselves via DZ BANK (group clearing).

In the context of liquidity management, the DZ BANK Group distinguishes between short-term liquidity (liquidity in the maturity band of up to one year) and structural liquidity (liquidity in the maturity band of more than one year).

The DZ BANK Group has a diversified funding base for short-term liquidity. A considerable portion is accounted for by money market activities resulting from the cash-pooling function with the local cooperative banks. This enables cooperative banks – within the approved limits – to invest available liquidity with DZ BANK or to obtain liquidity from DZ BANK if they need it. This regularly results in a liquidity surplus, which provides one of the main bases for short-term funding in the unsecured money markets. Corporate customers and institutional clients are another important source of funding for covering operational liquidity requirements.

For funding purposes, the DZ BANK Group also issues money market products based on debt certificates under a standardized groupwide multi-issuer euro commercial paper program through its offices and branches in Frankfurt, New York, Hong Kong, London, and Luxembourg. In addition, a US CP head office program is used centrally by DZ BANK Frankfurt.

Key repo and securities lending activities, together with the collateral management process, are managed centrally in DZ BANK's Group Treasury division as a basis for secured money market financing activities. Funding on the interbank market is not strategically important to the DZ BANK Group.

The DZ BANK Group also has at its disposal liquid securities that form part of its counterbalancing capacity. These securities can be used as collateral in monetary policy funding transactions with central banks, or in connection with secured funding in private markets.

**Structural liquidity** activities are used to manage and satisfy the long-term funding requirements (more than one year) of DZ BANK and, in coordination with the group entities, those of the DZ BANK Group.

Group Risk Controlling prepares an annual internal funding plan, which is based on the funding requirements calculated for the DZ BANK Group and DZ BANK for the next three years. The funding plan is calculated for a baseline scenario (matching the baseline scenario for strategic planning) and for at least one adverse scenario. The funding requirements are updated monthly and the adopted planning is backtested.

The risk report within this group management report includes disclosures on **liquidity adequacy** (chapter VI.6). The year-on-year changes in cash flows from operating activities, investing activities, and financing activities are shown in the **statement of cash flows** in the consolidated financial statements. The contractual cash inflows and cash outflows are set out in the **maturity analysis** in note 86 of the notes to the consolidated financial statements.

## III Events after the balance sheet date

There were no events of particular importance after the end of the financial year.

## IV Outlook

### 1 Economic conditions

The outlook for the macroeconomic environment provides the basis for projections for 2025 regarding financial position and financial performance as well as expected liquidity and capital adequacy. Any adverse macroeconomic factors that present a material risk to the DZ BANK Group are addressed and examined in detail in chapter VI.5.2 of the risk report. Opportunities arising from favorable factors are presented in chapter V.2.1 of the opportunity report.

#### 1.1 Global economic trends

The outlook for the global economy in 2025 is extremely uncertain following Donald Trump's election victory. During the election campaign, the future US president had raised the prospect of significant increases in trade tariffs for all trading partners, but especially China. However, it may be some time before there is clarity about when, and to what extent, Trump will actually roll out his protectionist policies. Assuming that the new US administration imposes additional tariffs of 10 percent on all imports from around April 2025, economic growth is likely to start slowing down in the second half of the year worldwide, particularly in China and other export-driven economies such as Germany. This would take its toll on German companies in the form of higher import prices and shortages of input products. Moreover, export volumes would decline. However, exports to the United States might be brought forward in the first few months of 2025, which would mitigate the adverse impact on growth initially.

The assumed imposition of tariffs will affect the global economy at a time when growth is already lacking momentum. Current negative factors include the still elevated level of interest rates in many regions, although interest rates have now fallen markedly from their peaks. The loss of purchasing power resulting from the sharp price rises that have taken place are having a knock-on effect despite significant wage increases and, according to DZ BANK, this is weighing on consumer sentiment. All of this could lead to subdued demand in most national economies. Nevertheless, inflationary pressure has eased considerably and inflation rates have fallen to within reach of the central banks' targets, giving the central banks enough headroom to start lowering interest rates again in recent months. Over the course of 2025, interest-rate cuts are expected to continue in the first instance, and households' purchasing power should gather further strength. Both of these developments should provide some support for demand across the economy.

Although the Chinese economy achieved robust growth of 5.0 percent in 2024, its future performance will be adversely affected by various factors, as described in detail in chapter VI.5.2.2 of the risk report. On the other hand, Chinese industry is making huge advances with technologies of the future and, according to the Centre for European Reform, is not only increasingly squeezing out non-domestic companies in China itself but also making inroads into foreign markets, such as the EU single market, and thereby creating more competitive pressure there.

The various conflicts around the world and the resulting trade frictions are also holding back the global economy. These developments are covered in chapter VI.5.2.1 of the risk report.

#### 1.2 Trends in the USA

The US economy was buoyant in 2024, with GDP rising by 2.8 percent year on year. This was mainly because the continued increase in employment levels fueled consumer spending. High levels of government spending also shored up growth, although this meant that the annual budget deficit stood at 7.6 percent of economic output in 2024.

In 2025, the policies of the new US administration will likely have a marked influence on the economy of the United States. After all, not only did Trump achieve a clear victory in the presidential election, but the

Republican Party also secured a slim majority of the seats in both the House of Representatives and the Senate. This means that the US president will probably be able to deliver on many of his election promises. Since Trump's inauguration a few weeks ago, the new US administration has already introduced far-reaching policy changes, including higher tariffs and, in particular, deregulation and stricter migration policy. Tax breaks and an overall increase in government debt are also likely, although the timing and scope of the measures to be taken are as yet unclear. The risks associated with rising government debt are described in more detail in chapter VI.5.2.2 of the risk report.

DZ BANK anticipates that economic momentum in the United States will weaken over the course of 2025. The tariffs that Trump is threatening to impose are unsettling businesses and consumers, and the latter group is worried that inflation will return. Furthermore, unemployment may increase slightly as a result of extensive dismissals across the public sector. Should US trade tariffs rise markedly from spring 2025 onward, companies in the United States will be unable to avoid passing on at least some of the resulting higher costs to consumers. Consequently, the inflation rate is expected to start rising again, and the average rate for 2025 is predicted to climb to 3.3 percent. This will likely act as a brake on consumer spending. DZ BANK therefore anticipates only moderate GDP growth of 1.9 percent in 2025.

### 1.3 Trends in the eurozone

The eurozone economy maintained its moderate rate of recovery over the course of 2024. In the third quarter, GDP in the eurozone rose by 0.4 percent compared with the previous quarter. The growth rates in the previous two quarters had been 0.2 percent and 0.3 percent. Countries such as Spain, but also Portugal, have recently been the main sources of support for the eurozone economy. In the final quarter of 2024, however, economic momentum declined again and growth was at zero, one of the main factors being the weakness of the German economy. The industrial sector in particular suffered from soft demand, which had a detrimental effect on economic growth. Nonetheless, a slightly brisker service sector made up for this to some extent. Overall, however, the eurozone generated year-on-year growth of just 0.7 percent in 2024.

The main influence on the economic situation in 2025 will be the trade policy of the new US administration. US tariffs may lead to a decline in exports and curb overall growth in the eurozone. This will probably affect not only direct exports to the United States but also the trading of input and intermediate products within Europe. Trading between Europe and China will likely be hampered too, as the latter is expected to be hit by even higher US tariffs that will weigh heavily on its economy. Heightened uncertainty stemming from the change in the economic environment will probably have an adverse impact on investment within the eurozone and on consumer spending. DZ BANK believes that the effects of exports being brought forward at the start of this year should ensure slightly stronger economic growth, but the tariff shock from spring 2025 onward is likely to result in a noticeable economic slowdown. DZ BANK therefore predicts economic growth for the eurozone of only 0.5 percent in 2025.

In 2024, upward pressure on consumer prices continued to ease compared with the previous year. At 2.5 percent, the inflation rate in 2024 was much lower than the 2023 rate of 5.4 percent. By October, the rate of inflation had fallen to 2.0 percent, but then went up again slightly in November and December. The ECB has now begun lowering its key interest rates, partly in response to the weak economic conditions. Nevertheless, DZ BANK has identified many factors that could prove to be an obstacle to a further reduction in inflationary pressures. For example, significant wage increases are expected to continue driving up prices in the service sector in 2025. Moreover, the EU will not simply sit back and accept the US government's tariff policy and is likely to impose retaliatory tariffs on US exports to Europe. This would probably lead to upward inflationary pressure in the eurozone. Consequently, slightly higher prices for industrial goods and for some foods are anticipated in the latter part of 2025. The euro is also expected to continue depreciating against the US dollar, which will add to the inflationary pressure too. Conversely, DZ BANK expects the relatively moderate rise in the oil price and the generally lackluster economic situation to have a dampening effect on inflation. All in all, the inflation rate in the eurozone is therefore unlikely to fall much further. DZ BANK estimates that the rate of inflation will decline only slightly compared with 2024 and predicts 2.2 percent for 2025.

## 1.4 Trends in Germany

According to DZ BANK, 2024 was a fairly disappointing year for the German economy. Economic output edged down by 0.2 percent over 2024 as a whole and therefore contracted for the second year in succession. Economic growth hovered around zero for most of the year and was just into negative territory in the final quarter. The German economy therefore continued to perform worse than the eurozone as a whole. In DZ BANK's view, weak international demand is taking its toll on the crucial German export sector. Moreover, consumers are unsettled by the fallout from the wave of inflation and by growing fears about possible job losses. So far, higher real wages have led to an uptick in savings, whereas household consumption has been restrained. The only notable support for economic growth came from higher government consumer spending in 2024.

Germany's manufacturing sector, in particular, is faced with structural challenges. Energy prices for manufacturers are high by international comparison and China is transitioning from an export market for German products to a rival producer of high-quality industrial goods, thereby putting pressure on German industry. According to DZ BANK, Germany's political challenges at home – the collapse of the 'traffic-light' coalition, the snap Bundestag election, and the likely change of government – are creating additional uncertainty for businesses and consumers too.

DZ BANK does not expect the German economy to pick up momentum in 2025 either. The first few months are likely to be dominated by the election campaign and the formation of a new federal government. Even if the government is in place by Easter (mid-April), as is planned, there is a risk that the political standstill will rattle consumers and companies will not have a reliable basis for planning. This is critical because the new US administration is a powerful player that is ratcheting up the pressure on Europe and thus Germany. US tariffs on exports of German goods to the United States pose a particular threat to Germany's export sector as the United States has become the biggest customer for German industrial products in recent years. The tariff shock anticipated by DZ BANK will likely lead to a slump in German economic output, from which Germany's economy will probably recover only gradually. Given that the already high energy prices put companies at a disadvantage and higher trade tariffs will make access to the US market more difficult, it is expected that decisions about business investment in Germany will be reconsidered or postponed. DZ BANK therefore estimates that German economic output will stagnate in 2025.

As in the eurozone, opposing effects will impact on consumer prices in the forecast period. Any retaliatory tariffs imposed by the EU amid escalating tariff disputes will tend to push up the rate of inflation. Moreover, a weakening of the euro against the US dollar will make imports more expensive. By contrast, persistently weak economic conditions and the easing of upward pressure on energy prices are having a dampening effect on inflation. DZ BANK predicts an inflation rate of 2.3 percent for 2025, which is similar to the level seen in 2024.

## 1.5 Trends in the financial sector

The major central banks started to lower interest rates again in the reporting year, following a phase of sharp increases from 2022 onward in the wake of the coronavirus pandemic. This included the federal funds rate, which the US Fed had cut to a range of 4.25 percent to 4.5 percent by the end of 2024. Furthermore, the ECB reduced the main refinancing operations interest rate in several stages, reaching 3.15 percent at the end of the reporting period. DZ BANK believes that this general trend will continue in the forecast period and the central banks will lower their benchmark rates further, although there is likely to be variation in terms of timing and speed.

Given the fall in interest rates, it is assumed that interest-related business has now passed its peak. Transaction activity in the real estate markets has remained fairly subdued so far owing to the macroeconomic challenges, the resulting diminished inclination to invest, and still elevated borrowing costs. In some asset classes, however, there are emerging signs of a cautiously positive trend in commercial and residential property transactions. DZ BANK believes that the necessary price corrections in the real estate market have now largely been made, and decreases in property values are expected only on a smaller scale. Yields in the real estate market are therefore regarded as stable on the whole.

Conditions in the equity markets were encouraging overall in 2024, and DZ BANK predicts further rises for the DAX and EURO STOXX in 2025. European companies with strong business in the US are most likely to benefit from low US taxes and deregulation. However, robust profit forecasts and innovation in areas such as artificial intelligence will contribute to the uptrend too. The risks associated with heightened volatility in the financial markets are described in more detail in chapter VI.5.2.7 of the risk report.

Besides economic factors, the financial sector is increasingly experiencing pressures in terms of both adjustment and costs arising from structural changes. Such changes could become even more prevalent in the face of growing price competition and the potential threat of a wage/price spiral. In this situation, the financial sector is faced with the challenge of reviewing existing business models, adapting them if required, and substantially improving efficiency by digitalizing business processes.

The implementation of future EU banking regulations will see a continued need for adaptation in the finance sector. The agenda of regulatory reforms initiated in response to the financial crisis is aimed at making the financial industry more resilient in the event of a crisis and ensuring that risks arising from its business activities are not borne by the public sector. And indeed, the financial industry has reduced its leverage and bolstered its risk-bearing capacity by improving capital and liquidity adequacy. In the long term, adjustments will be driven by the adoption of standards relating to the environment, social matters, and responsible corporate governance (ESG). The challenge in this regard lies in implementing these requirements in overall business management, risk management, and reporting systems. In addition to opening up new market opportunities, the consideration of ESG topics also results in the need to identify and manage risks in a variety of ESG categories.

## 2 Financial position and financial performance

In 2025, the DZ BANK Group will continue to pursue its strategic objectives in the context of its role within the Cooperative Financial Network. In an environment that remains challenging in terms of both market and competition, this means, for example, rigorously exploiting potential business in collaboration with the cooperative banks, while at the same time maintaining the planned implementation of various initiatives focused on the digitalization and sustainability of the DZ BANK Group along the entire value chain.

The forecasts below are based on the outcome of the DZ BANK Group's annual planning process. Further information on the planning process can be found under 'DZ BANK Group fundamentals' (chapter I.2.4). Potential variances during 2025 from the underlying planning scenario, in the form of opportunities and risks, may have an influence on financial position and financial performance. These uncertainties are monitored continuously and factored into the DZ BANK Group's planning, reporting system, and management.

According to the planning for 2025, **total assets** will fall slightly compared with the figure as at the end of 2024.

In light of the muted economic outlook, **net interest income** (including net income from long-term equity investments) is predicted to fall significantly in 2025 compared with the high level recorded in 2024. The figure for the reporting year received a noticeable boost not only from the encouraging level of income from the operating business but also from accounting-related effects that had a positive impact on net interest income but a countervailing negative impact on gains and losses on trading activities.

**Net fee and commission income** is projected to fall slightly year on year in the forecast period. This will mainly be due to the decline in net fee and commission income in the UMH operating segment.

**Gains and losses on trading activities** will amount to a substantial net gain in 2025, representing a considerable improvement compared with the year under review. This can be explained by the accounting-

related effects mentioned above in connection with net interest income, which resulted in a net loss on trading activities in the reporting year.

Whereas non-recurring adverse effects had to be recognized in 2023, **gains and losses on investments** normalized at a high net gain in the reporting year and a significant deterioration is expected in 2025.

For **other gains and losses on valuation of financial instruments**, a significant deterioration is anticipated in the forecast period. This is because the recent very positive effects in the DZ BANK – CICB and UMH operating segments will no longer be included.

Despite growth in premiums, **net income from insurance business** is predicted to decrease sharply in the year ahead due, in particular, to a marked increase in expenses.

In 2025, expenses for **loss allowances** are forecast to decline considerably compared with 2024 owing to lower expenses at DZ BANK – CICB.

A small increase in **administrative expenses** is projected for 2025, driven primarily by staff expenses.

**Other net operating income** will probably drop back sharply in 2025, having been at a high level in the reporting year. This can be explained by various effects in the individual operating segments, although some of them will offset each other.

A moderate decrease in **profit before taxes** is predicted in 2025, following on from the very good figure posted for 2024. It is projected to be within the long-term target range of between €2.5 billion and €3 billion.

The **cost/income ratio** is likely to climb markedly in the year ahead owing to a small decrease in income and a slight rise in administrative expenses.

Based on the decline in profit before taxes and the expectation of only a slight increase in the base rate of return, **regulatory RORAC** is projected to fall sharply in the forecast period.

### 3 Liquidity and capital adequacy

Based on the liquidity risks measured as at the reporting date and the liquidity levels available, the **liquidity adequacy** of the DZ BANK Group and the DZ BANK banking group were assured for 2025 at the time of preparation of this group management report, from both an economic and a regulatory perspective.

Further information on liquidity adequacy can be found in the risk report (chapter VI.6).

The **capital adequacy** of the DZ BANK Group, the DZ BANK financial conglomerate, and the DZ BANK banking group were assured for 2025 at the time of preparation of this group management report, from both an economic and a regulatory perspective; that is to say, they have sufficient available internal capital and eligible own funds that can be drawn on to cover the risks measured as at the reporting date.

Over the last few years, the DZ BANK Group has greatly strengthened its capital base from its own resources (through the retention of profits) and through corporate action. In 2025, a high priority will once again be given to strengthening the capital base in order to ensure stable capital ratios. For 2025, DZ BANK anticipates that the DZ BANK Group's **common equity Tier 1 capital ratio** will hold steady at above 16 percent.

Further information on capital adequacy can be found in the risk report (chapter VI.7).

## 4 Operating segments in detail

The statements made below regarding the changes relate solely to the forecasts for the individual management units. The impact on the Group's profit before taxes will vary depending on the relative importance of the individual management unit to the total amount for the line item in question.

### 4.1 BSH

At the end of 2024, the regressive factors that had dominated the market environment in recent years, such as high inflation and supply chain disruption, had faded into the background. But, in BSH's view, the significant rise in borrowing costs on the back of surging key interest rates in 2022 and 2023, combined with persistently high building costs, look set to remain a drag on residential construction in 2025. According to BSH, other obstacles include the shortage of suitable land for building – particularly in rapidly expanding urban areas – plus constantly changing development lending conditions and excessive bureaucracy. This prediction is reflected in one of the leading indicators for residential construction: Whereas planning permission had been granted for approximately 157,200 homes at the end of the third quarter of 2024, this was lower than the figure of around 195,700 at the end of the corresponding period of 2023. The Zentralverband Deutsches Baugewerbe (ZDB) [German Construction Confederation] is therefore forecasting the completion of just 220,000 or so homes in 2025, which equates to a year-on-year decline of 12 percent. This forecast is subject to significant uncertainty though. For example, geopolitical challenges could cause inflation and interest rates to rise again, which would put additional adverse pressure on loan-financed housing starts. The election in the United States and the end of the 'traffic-light' coalition in Germany have, in BSH's eyes, only ramped up the general uncertainty for the markets and consumers alike.

In contrast to housing starts, the market for existing properties is set to grow in 2025, driven by increased demand from owner-occupiers for such properties. Moreover, renovation work and energy efficiency measures in this segment will continue to act as an anchor of stability amid the current construction crisis. Energy used in buildings, which is responsible for around 40 percent of the EU's greenhouse gas emissions, will likely play a key role in achieving the EU climate targets. If the EU is to reach its climate neutrality target by 2050, the current annual rate of less than 1 percent at which existing buildings are undergoing energy efficiency improvements across the EU is nowhere near enough (Germany in 2024: approximately 0.69 percent). Help should come from the revised EU Energy Performance of Buildings Directive (EPBD), which took effect in 2024, and from implementation of the strategy 'A renovation wave for Europe' as part of the European Green Deal, which aims to double the energy renovation rate for buildings by 2030. Since 2024, Riester savings products have been eligible as a means of funding for building renovation projects.

Expectations regarding BSH's business performance in 2025 continue to be influenced by the impact of the turnaround in interest-rate policy, significantly inflated construction costs, and the lack of a clear outlook for future government support for new builds, which – along with the generally difficult economic situation – will likely dampen private property developers' inclination to invest.

In its core home finance business, BSH therefore anticipates an only moderate increase in the lending volume due to higher real wages, declining inflation, and stable interest rates against a backdrop of slightly rising prices for residential real estate. The growth of the lending volume is expected to stem from the upturn in the market for existing properties and an increase in renovation measures on the back of anticipated rises in energy prices and stricter rules on the energy efficiency of real estate. The increase in interest rates since the phase of low interest rates will continue to have a positive effect on demand for home savings loans, and BSH predicts that the volume of new business will be on a par with the good level seen in 2024.

In the core home savings business, the volume of new business is projected to decline slightly owing to heightened uncertainty and gloomy economic prospects. However, support will come from the Fuchs 06 home savings product launched on October 10, 2024. The new scale of rates and charges takes account of the changed interest-rate environment and provides more options, particularly for finance providers, those saving for retirement, young people, and anyone keen to implement energy efficiency improvements.

Taking these various factors into account, BSH anticipates a significant improvement in its **profit before taxes** in 2025 that will comprise the following.

**Net interest income** is likely to rise sharply year on year in 2025, boosted by the expected further growth of the portfolio of other building loans and home savings loans.

**Net fee and commission income** will see a substantial fall in percentage terms, primarily due to an increase in new business in the core home finance business.

A significant decrease in **loss allowances** for loans and advances is anticipated. Although the labor market showed signs of cooling at the end of 2024, it was still robust by historical comparison, with the expectation of a virtually unchanged unemployment rate and a high number of vacancies. This is likely to be reflected in the level of loss allowances for loans and advances going forward.

**Administrative expenses** are projected to rise slightly in 2025. Staff expenses will go up a little, due in large part to the wage settlement reached in 2024. Strategic projects and the ongoing development of the core home savings and home finance businesses are expected to result in increased capital expenditure, but the continuation of measures to manage costs will keep this increase in check.

A sharp drop in **other net operating income** is predicted, mainly because the figure for 2024 included the reversal of other provisions.

Based on current assessments, the **cost/income ratio** will fall slightly.

**Regulatory RORAC** is expected to increase significantly.

#### 4.2 R+V

Given the macroeconomic risk factors and geopolitical tensions, 2025 will be another very challenging year. Nonetheless, R+V – the composite insurer in the Cooperative Financial Network – is planning to continue on its trajectory of profitable growth in 2025.

Overall, R+V anticipates a marked year-on-year fall in the insurance segment's **profit before taxes** in 2025. A moderate rise in insurance revenue is forecast. The premiums that are included in insurance revenue, which comprise the premiums actually received, will remain more or less unchanged compared with the reporting year.

**Gains and losses on investments held by insurance companies** are projected to deteriorate markedly year on year based on the capital market parameters expected for 2025, whereas insurance finance income or expenses will see a marked improvement.

The **non-life insurance** division is expected to continue to grow as planned in 2025. A moderate increase in insurance revenue is predicted for 2025. Premiums received should show slight growth. The combined ratio (net) is projected to improve, falling to just below the level of the reporting year.

Insurance revenue in the **life and health insurance** division is expected to be a little lower in 2025 than in 2024. Premiums received are likely to edge up in 2025. The contractual service margin will fall slightly compared with the 2024 level. The amortization of the contractual service margin will increase moderately.

In the **inward reinsurance** division, the improvement in prices for reinsurance cover is expected to continue in 2025. This should result in significant growth of insurance revenue and a moderate rise in the volume of premiums received, which are included in this revenue. The forecast shows a marked rise in the combined ratio (net).

**Regulatory RORAC** will see a moderate decline in 2025 owing to the lower level of profit before taxes.

#### 4.3 TeamBank

Whereas uncertainties will continue to prevail in the first half of 2025, TeamBank anticipates opportunities for a rally in consumer spending in the second half of the year. It expects inflation to edge down. Recent increases in real wages could also help to revive consumer spending as the year continues. In TeamBank's opinion, this trend is supported by the clarity that is expected to materialize regarding Germany's future political direction and economic policy. Consequently, the inclination to make purchases and the inclination to borrow should strengthen.

In collaboration with the cooperative banks, TeamBank is aiming in 2025 to generate profitable, sustainable growth at a rate that is higher than that of the market. This may result in a noticeable increase in **net interest income**.

**Net fee and commission income** is predicted to fall markedly year on year, mainly because of the expected increase in bonus payments to partner banks in line with the higher level of new business.

**Administrative expenses** are anticipated to hold steady in 2025.

A sharp rise in **loss allowances** is forecast for 2025 in view of portfolio growth and a risk situation that remains elevated. Given this risk situation, TeamBank forecasts that it will continue to generate a **profit before taxes**, albeit one that is much lower than the 2024 figure in relative terms.

The **cost/income ratio** for 2025 is predicted to improve slightly year on year.

Primarily because of the significant growth in loss allowances and related fall in profit before taxes, TeamBank expects a noticeable decline in **regulatory RORAC** in 2025.

#### 4.4 UMH

In view of the economic conditions outlined above, UMH believes that investments will have to be considered particularly carefully in 2025 in order to maintain a good balance between minimizing risk and focusing on returns. Overall, however, the opportunities prevail, so this approach should pay off. In this environment, UMH plans to continue on its profitable growth path in 2025. As well as pursuing its successful sales strategy, it will increasingly invest in order to put the company in a robust position for the future. That is why UMH has intensively studied the strategic topics that will be of relevance in the years ahead, addressing them in its FitForFuture program in order to lay solid foundations for the coming years. To this end, five major strategic areas of growth have been identified for Union Investment: master plan, active asset manager, sustainability, digitalization, and organizational model. These are aimed at making the business model more profitable and robust and increasing awareness of the company's brand.

The main external influence on UMH besides the capital markets is regulation. Burgeoning regulatory requirements are resulting in significantly higher spending on projects, personnel, and systems. UMH believes that there is no end to this trend in sight. It therefore remains relevant and, where foreseeable at the time of planning, UMH takes it into account in its planning.

Achieving the objectives described above – primarily securing UMH's competitiveness and satisfying the growing regulatory requirements – calls for substantial capital expenditure and this has been earmarked in the budget.

UMH is aiming for a stable average level of assets under management in 2025. A moderate year-on-year decline in new business is expected, and overall performance is predicted to be just into positive territory in 2025.

**Net fee and commission income** for 2025 is projected to be substantially lower than in the year under review. This is due to a sharp decrease in the income expected from performance-related management fees and a moderate reduction in volume-related net fee and commission income.

A significant deterioration in **net financial income/net finance costs** – comprising net interest income, gains and losses on investments, and other gains and losses on valuation of financial instruments – is likely in 2025, largely because of an anticipated negative change in the effect from the valuation of guarantee commitments for investment products and from a much lower contribution from the investment fund units held as part of own-account investing activities.

**Administrative expenses** are projected to rise slightly in 2025. Staff expenses at UMH are also likely to edge up. Based on current assessments, general and administrative expenses will rise markedly, largely because of higher expenses for consultancy, public relations, and marketing. Depreciation and amortization charges are predicted to be slightly lower than in 2024.

A sharp increase in **other net operating income** is expected. This is mainly because non-recurring items, such as non-recurring write-offs or restructuring expenses, are no longer included in the planning.

Based on the factors described above, **profit before taxes** in 2025 is projected to be significantly lower than in 2024.

From the current perspective, a moderate increase in the **cost/income ratio** and a substantial fall in **regulatory RORAC** are expected.

If a judgment of the Nuremberg-Fürth regional court in the legal proceedings brought by Verbraucherzentrale Baden-Württemberg e. V. [Baden-Württemberg Consumer Association] against ZBI Fondsmanagement GmbH (case no.: 4 HK O 5879/24) becomes final and binding and then sets a precedent that has to be followed by the entire sector, this will likely have a negative impact on sales of open-ended mutual real-estate funds. Further developments currently depend on too many uncertainties to be able to reliably determine the quantitative impact at present.

#### 4.5 DZ BANK – CICB

In view of the economic conditions and the ongoing geopolitical tensions, the financial markets are expected to be subject to significant volatility and uncertainty in 2025. The banking industry again benefited from good levels of net interest income in the reporting year. Margins in interest-related business are predicted to narrow in 2025 as the ECB is likely to continue gradually lowering its key interest rates. The anticipated rise in US tariffs and potential new trade disputes may also adversely affect trade flows and investment decisions.

A moderate decrease in **net interest income** (excluding income from long-term equity investments) is expected in 2025.

The volume of lending in corporate banking in Germany and in the Structured Finance division is projected to rise year on year, resulting in a modest increase in income. The Investment Promotion division's contribution to earnings is forecast to decline slightly owing to a smaller lending volume.

Net interest income in the money market and capital markets business will likely fall significantly due to interest-rate cuts by the ECB.

**Net fee and commission income** is expected to be slightly lower in 2025 than it was in 2024.

The Corporate Banking business line's income from project finance, asset securitization, and loan syndication in 2025 is anticipated to be markedly below the strong 2024 figure.

In the Transaction Banking business line, net fee and commission income is projected to rise sharply in 2025 owing to the insourcing of payments processing at DZ BANK, which will eliminate the related fee and commission expenses paid under the service procurement agreement with equensWorldline SE.

Net fee and commission income in the Capital Markets business line is projected to fall markedly, particularly such income from the securitization business.

**Gains and losses on trading activities** are likely to improve significantly in 2025 because IFRS-related effects will have far less of an impact. Within this line item, however, a noticeable deterioration in gains and losses on operating trading activities is expected as a result of the gloomier economic conditions combined with the lower level of interest rates.

In 2024, **other gains and losses on valuation of financial instruments** reflected not only positive credit-risk-related measurement effects relating to financial assets measured using the fair value option but also a net gain from ineffectiveness in hedge accounting, which is not expected to be the case in 2025. The decline in the positive measurement effects will likely have a small negative impact in 2025.

**Gains and losses from the derecognition of financial assets measured at amortized cost** are not anticipated in 2025.

**Loss allowances** included large additions in respect of individual exposures in the year under review. Given the geopolitical and economic outlook, the need for loss allowances is expected to be material in 2025. However, the required net additions are anticipated to be lower than in 2024.

**Administrative expenses** are projected to rise moderately in 2025.

**Other net operating income** is set to be substantially lower than in the reporting year owing to the expected reduction in income from the reversal of provisions and accruals.

In view of these circumstances, **profit before taxes** in the DZ BANK – CICB operating segment is expected to rise significantly in 2025.

Current assessments show that the **cost/income ratio** will go up moderately in 2025 as income is expected to hold steady while administrative expenses will rise.

From the current perspective, **regulatory RORAC** will probably rise markedly in 2025 – despite moderately higher capital requirements – owing to the significant growth of profit before taxes.

#### 4.6 DZ HYP

The central banks lowered interest rates in 2024, thereby providing stability for real estate investors. The price corrections should mostly come to an end this year, and property values should now stabilize. DZ HYP assumes that real estate will continue to be regarded as an attractive investment product.

**Net interest income** in 2025 is projected to be noticeably lower than the 2024 figure. DZ HYP anticipates that business activities will remain stable, based on reasonable lending margins combined with a marked increase in the volume of new real estate finance business compared with 2024.

Current assessments show that credit spreads in public-sector finance are likely to widen in 2025. Consequently, **other gains and losses on valuation of financial instruments** are expected to deteriorate moderately at a low level in 2025.

**Loss allowances** in 2025 are projected to rise considerably year on year.

Greater regulatory requirements and the digital transformation of DZ HYP are having a negative impact on **administrative expenses**, with the result that this figure is expected to be up noticeably on the corresponding 2024 figure.

Based on a stable operating performance, but particularly because of the decline in net interest income, rising administrative expenses, and anticipated higher loss allowances, **profit before taxes** in 2025 is predicted to be substantially below the 2024 figure.

Accordingly, the **cost/income ratio** is expected to rise sharply.

**Regulatory RORAC** is likely to decline significantly due to the fall in profit before taxes forecast for 2025.

#### 4.7 DZ PRIVATBANK

DZ PRIVATBANK's operating business is expected to see a moderate increase in the volume-related key figures in its various areas of income-generating business.

**Net interest income** will probably decline considerably in 2025 owing to the lower level of interest rates and a lack of suitable possible replacements for expiring interest-rate items.

**Net fee and commission income** is likely to hold steady in 2025. The assets under management in private banking are projected to rise because of planned increases in inflow rates. The main value driver is fund volume, and the average volume of funds held by DZ PRIVATBANK is expected to decline.

**Gains and losses on trading activities** are forecast to deteriorate significantly in 2025 because customer-driven transaction figures are likely to be lower.

DZ PRIVATBANK's **administrative expenses** are projected to rise slightly in 2025.

Based on current forecasts, a sharp decrease in **profit before taxes** is expected for 2025 as a gloomier market environment is anticipated.

The **cost/income ratio** for 2025 is likely to be moderately higher than in the reporting year, while **regulatory RORAC** will probably fall significantly due to the higher base rate of return used in the calculation.

#### 4.8 VR Smart Finanz

In 2025, VR Smart Finanz will continue to pursue a decentralized approach with the aim of supporting the cooperative banks as its strategic partners in the corporate customer business and meeting the needs of their business customers for digital, rapidly available solutions. Given that economic conditions remain challenging, VR Smart Finanz believes that companies will continue to generate high demand for liquidity. Although conditions remain difficult, there is a growing need for capital expenditure, partly due to catch-up effects and the necessity for investment in the future, such as in energy efficiency. In this volatile market environment, VR Smart Finanz intends to step up collaboration with cooperative banks and other partners and to tailor its product portfolio to customer requirements. It is aiming to improve its efficiency with a modern IT infrastructure, automation of contract processing, and data-driven risk management. In addition, it is planning to strengthen marketing through its omnichannel capabilities and digital options for reaching customers.

Support for the local cooperative banks' sales processes, the expansion of new sales channels, and the refinement of the product portfolio are expected to lead to a significant increase in the volume of both new business and existing business despite the challenging economic situation. Consequently, **net interest income** will rise significantly and **net fee and commission income** will rise markedly.

The gradual macroeconomic stabilization in 2025 is predicted to lead to a sharp fall in expenses for **loss allowances** compared with 2024. Based on the assumption of only a small increase in administrative expenses and a jump in income compared with 2024, there will be a noticeable improvement in the **cost/income ratio**.

The developments described above and the disciplined channeling of resources into initiatives aimed at generating growth and containing risks will – assuming that conditions remain challenging – lead to a significant improvement in **profit before taxes** and thus a sharp rise in regulatory RORAC in 2025.

#### 4.9 DZ BANK – holding function

The expense recognized under **net interest income** is predicted to fall noticeably in 2025. This forecast is mainly due to changes in average interest rates in the balance of expenses for the funding of long-term equity investment carrying amounts and income from the investment of capital.

**Administrative expenses** are expected to remain unchanged year on year in 2025.

A slightly smaller **loss before taxes** is forecast for 2025.

## V DZ BANK Group and DZ BANK opportunity report

The details relating to DZ BANK are included in the opportunity report for the DZ BANK Group. A separate opportunity report is not prepared for DZ BANK. Unless stated otherwise, the disclosures relating to the DZ BANK Group also apply to DZ BANK.

### 1 Management of opportunities

Based on the three areas of potential listed in chapter V.2, such as better economic conditions than those assumed in the planning scenario, the DZ BANK Group defines **opportunities** as situations in which potential income can be unlocked and/or potential cost savings can be achieved.

The management of opportunities is integrated into the **annual strategic planning process**. The potential for returns is identified and analyzed on the basis of various macroeconomic scenarios, trends, and changes in the market environment, and then included in strategic financial planning. Details about the strategic planning process are presented in chapter I.2.4 of the (group) management report.

Opportunity management is an integral component of **governance** and is therefore taken into account in the general management approach, in the management of subsidiaries via appointments to key posts, and in the DZ BANK Group's committees. Details about the governance of the DZ BANK Group can be found in chapter I.2.2 of the (group) management report.

### 2 Potential opportunities

#### 2.1 Potential opportunities from macroeconomic developments

The statements made in the outlook on the expected business performance of the DZ BANK Group in 2025 are based on the macroeconomic scenario that DZ BANK considers to be the most likely. Opportunities may arise for the DZ BANK Group if economic conditions in the relevant markets prove to be better than in this scenario.

In a positive scenario such as that, the looming trade disputes between the United States, China, and the European Union would be settled through negotiations, and the introduction of tariffs – which would be damaging for the global economy – would be prevented. Furthermore, US President Donald Trump would not be able to push through his disruptive political agenda in full. This would benefit Germany's export-led economy, in particular, but economic growth in China and the United States could also stabilize as a result.

An easing of tensions in geopolitical trouble spots would also provide positive impetus. The prospect of an end to the war in Ukraine, for example, would bring energy and commodity prices back down. Equally, de-escalation of the conflict in the Middle East and a political détente between China and Taiwan and between North and South Korea would have a stabilizing effect on the global economic situation and mitigate a rise in financial market volatility around the world. A more stable political environment would also give less ground to growing nationalistic and right-wing populist trends in Europe and thereby strengthen investor and business confidence. This would also create a steadier base for economic growth and financial development going forward.

In light of improved growth prospects and with inflation hovering at only just over the 2 percent mark, the European Central Bank could cut its deposit facility interest rate to a neutral level of 2.25 percent. Further reductions in key interest rates, in combination with a consistent and moderate rate of inflation, would stimulate investment and improve consumer sentiment. This could also bring about a recovery in the real estate markets,

with positive knock-on effects on the DZ BANK Group's financial performance. The improved growth outlook and associated increases in corporate profits would produce a robust uptrend in the European share indices too. A consistent economic approach in Europe, joint decision-making, and a gradual lowering of the key interest rate could stimulate growth in the eurozone despite high debt levels.

A new government in Germany that is in a position to implement key domestic reforms on the basis of a solid majority in the Bundestag would provide further support for this growth. Moreover, Germany could take on a leading role in Europe and set the tone for fiscal and economic policy, bringing about a lasting upswing, particularly on the domestic front.

All of the positive factors outlined above are highly unlikely to materialize together. From the DZ BANK Group's perspective, however, even the occurrence of individual factors would create an environment that would probably benefit the individual business models and the financial position and financial performance of the DZ BANK Group. Stable conditions in the financial and capital markets would have a positive impact on the net interest income and net fee and commission income generated from customer business and on net income from insurance business. In particular, an assumed economic recovery and impending crises failing to materialize could potentially limit the net expense recognized for loss allowances and thereby help to increase the Group's net profit.

## 2.2 Potential opportunities from regulatory initiatives

Regulatory changes and initiatives may provide banks and insurance companies with the opportunity to offer products or services that are better tailored to customers' needs. Further development of statutory requirements, such as the Sustainable Finance Disclosure Regulation (SFDR) as part of the EU Sustainable Finance Framework, may lead to customers and the markets participating in sustainable finance initiatives on a greater scale, which would provide banks and insurance companies with the opportunity to strengthen the unique selling points of their products and services and to unlock potential growth in sustainable finance. This would have a positive impact on, for example, net fee and commission income and net interest income.

## 2.3 Potential opportunities from strategic initiatives

The strategic focus of the DZ BANK Group (see chapter I.1 of the (group) management report) follows the guiding principle of fulfilling the role of a **network-oriented central institution and financial services group**. Business activities are centered on the local cooperative banks and their customers. The objective of this strategic approach is to consolidate the positioning of the Cooperative Financial Network as one of the leading financial services providers in Germany on a long-term basis. The partnership between the cooperative banks and the entities in the DZ BANK Group is built on the principles of subsidiarity, decentralization, and regional market responsibility.

The DZ BANK Group develops and implements **strategic initiatives and programs** at three levels:

Firstly, the entities in the DZ BANK Group work on strategic projects and initiatives in collaboration with the cooperative banks and Atruvia AG, Frankfurt am Main, with the leading role taken by the Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V., Berlin (BVR) [National Association of German Cooperative Banks]. By implementing the strategy agenda, the central service providers in the Cooperative Financial Network assist the cooperative banks with their individual strategic processes and help them to assume responsibility for their own profitability. Based on the strategy agenda, the 'Germany-wide strategic portfolio bringing together strategic initiatives of the Cooperative Financial Network' has been established with the aim of improving the transparency of these initiatives for the cooperative banks.

Secondly, the entities in the DZ BANK Group have jointly identified key areas of collaboration (such as operating models and sustainability) that offer potential to reinforce their future viability and profitability. The aim is to continue to develop and take action in these areas of collaboration over the coming years. In 2024, for example, a new area of potential in generative artificial intelligence was established.

Thirdly, each individual entity in the DZ BANK Group pursues its own strategic initiatives. One example is the 'Verbund First 4.0' strategic program at **DZ BANK**, which is designed to ensure the organization's resilience for the future. The program is aimed at improvements in three key areas: market presence (network-focused, customer-oriented, and digital), control and production processes (efficient, effective, and focused), and corporate culture (performance-driven and integrative). The 'Verbund First 4.0' strategic program is updated continually in line with requirements. Topics that are related to 'Verbund First 4.0', such as sustainability, digitalization (e.g. generative artificial intelligence), and employer branding, are key elements of the transformation of the economy.

**BSH** describes its long-term objective through its vision of being a reliable partner that helps its customers to achieve their dreams when it comes to their home. The building society works with the cooperative banks to develop all-round solutions in the homes and housebuilding ecosystem, thereby strengthening the Cooperative Financial Network. It intends to remain the market leader in the home savings market and, together with the cooperative banks, defend its no. 1 position in the home finance market. In addition, it is making inroads into new areas of growth for homes and housebuilding by maintaining a firm focus on customers and facilitating close collaboration between the cooperative banks and BSH's field staff on marketing. BSH is the cooperative center of excellence (provider of products and solutions) for consumer home finance, playing an important part in strengthening the Cooperative Financial Network's market position. The evolution of BSH's role into that of a products and solutions provider for its bank partners and its integration into the homes and housebuilding cooperative ecosystem address the demand for end-to-end products and solutions and the creation of new business models centered around customers' basic needs alongside financial products and extending the value chain.

**DZ HYP** is forging ahead with digitalization in many areas of its business. In consumer home finance, it is further expanding its role as a decentralized product supplier for the banks in the Cooperative Financial Network. Competitive products, rapid processes, and a risk-adjusted pricing model give banks scope to generate income through fees and commissions and through cross-selling options. Programming the integration of Atruvia AG's omnichannel platform was a central focus in 2024. Starting in the first quarter of 2025, DZ HYP will thus be able to support local cooperative banks with best-in-class products and services on this platform that they can use to advise customers on consumer home finance. The main aspects of DZ HYP's FK Digital project in its corporate customer business are deploying data optimally within processes, improving interfaces, and unlocking the associated potential for greater efficiency while, at the same time, catering to the current and future requirements of market players and supervisory authorities alike. The initial implementation phase of FK Digital began in 2023 and is expected to be completed in the second half of 2025. This should also help to further optimize the bank's streamlined, profitable approach incorporating intensive customer relationship management. The bank has also drawn up a strategy for implementing the DZ HYP cloud infrastructure. In 2024, it finished establishing the fundamental cloud infrastructure and plans to migrate the IT landscape to the future operating model by summer 2025. In this context, DZ HYP sees the use of artificial intelligence as a key issue for the future. As part of a preliminary study initiated in the third quarter of 2024, preparations are being made for an implementation project in the first half of 2025. Based on use cases, the added value from the strategic use of artificial intelligence will be tested in the handling of a number of processes. The real estate sector has the potential to play a key role in combating climate change. DZ HYP sees its own role as supporting the green transformation of the economy in order to channel cash flows toward more sustainable business, for example by financing more energy-efficient real estate.

**R+V's** vision is to be the cooperative center of excellence for insurance, healthcare cover, and retirement pensions, working closely with its sales partners. Making customers happy is the cornerstone of future success under its strategic program, WIR@R+V. The program is designed to boost R+V's earnings power by putting a greater emphasis on profitability so that it can continue to make a significant contribution to the success of business in the Cooperative Financial Network. R+V also remains firmly focused on its growth strategy of strengthening areas of importance for the future, such as healthcare and long-term nursing care, membership, sustainability, and the omnichannel approach. By delivering a consistently robust business performance, it can

maintain sufficient financial strength to be able to remain a reliable partner and deliver on its value propositions in the long term.

In response to the changing conditions in which it operates, **Union Investment** has created the internal FitForFuture program, which establishes the strategic areas of investment going forward. These areas of investment include not only sustainability and digitalization but also a 'learning organization'. Other key areas are the cementing of Union Investment's positioning as an active asset manager and the Masterplan platform in its retail business, which chimes with the aim of harnessing the potential of high-net-worth customers and the related product range. The Masterplan platform will also expand digital offerings for cooperative sales partners. This investment in the future will be cost-neutral and will thus help to secure the profitable growth of the Union Investment Group.

Positive effects from the strategic programs and initiatives could have a beneficial impact on, for example, net fee and commission income, net interest income, or administrative expenses.

## VI DZ BANK Group and DZ BANK risk report

### 1 Legal basis and disclosure principles

In its capacity as the parent company in the DZ BANK Group, DZ BANK is publishing this risk report in order to meet the transparency requirements for risks applicable to the DZ BANK Group as specified in **section 114 and section 117 of the German Securities Trading Act (WpHG)** and **section 315 of the German Commercial Code (HGB)** in conjunction with **German Accounting Standard (GAS) 20 – Group management report**.

The standards set forth in GAS 20 that are of relevance to the risk report are the following:

- The principles of group management reporting (**GAS 20.12–35**)
- The requirements pertaining to risk reporting (**GAS 20.135–164**)
- The requirements pertaining to the internal control system and risk management system that are relevant to the consolidated financial reporting process (**GAS 20.K168–K178**)
- The requirements pertaining to risk reporting relating to the use of financial instruments (**GAS 20.179–187**)
- The requirements pertaining to risk reporting by institutions (**GAS 20.A1.1–22**) and by insurance companies and pension funds (**GAS 20.A2.1–20**)

Furthermore, the risk report meets the disclosure requirements regarding risks applicable to DZ BANK as a separate entity that are specified in **section 289 HGB** in accordance with GAS 20.

With this report, DZ BANK also meets the risk reporting requirements specified in the International Accounting Standards (IAS) and International Financial Reporting Standards (IFRS), specifically those set out in the following legal standards:

- **IAS 1.134–136** (capital)
- **IFRS 7.31–42** (nature and extent of risks arising from financial instruments)
- **IFRS 17.121–132** (nature and extent of risks arising from contracts within the scope of IFRS 17)

This information is referred to in the notes to the consolidated financial statements and, as such, is formally part of the notes to the consolidated financial statements.

This does not include the legal standards below, because the required disclosures are not used to manage risk. In these instances, the disclosures are made in the notes to the consolidated financial statements:

- Accounting-related credit disclosures in accordance with **IFRS 7.35F(a)–36(b)**: note 85
- Maturity analysis in respect of financial assets and financial liabilities in accordance with **IFRS 7.39(a) and (b)**: note 86
- Sensitivity analyses in accordance with **IFRS 17.128**: note 96
- Claims rate trend for direct non-life insurance business and for the inward reinsurance business in accordance with **IFRS 17.130**: note 94
- Maturity analysis for insurance contracts issued and for reinsurance contracts held in accordance with **IFRS 17.132(b) and (c)**: note 96

The requirements in **IFRS 7.31–42** applicable to this risk report are limited to financial instruments in accordance with IAS 32 and IFRS 9. This shifts the focus of reporting to the types of risk directly related to financial instruments, namely liquidity risk, credit risk, equity investment risk, market risk, technical risk of a home savings and loan company, and the aspects of market risk and counterparty default risk that are not within the scope of IFRS 17.

The risk-related disclosure requirements in **IFRS 17.121–132** relate to contracts within the scope of IFRS 17. Consequently, the disclosure requirements from these standards relate to actuarial risk, the aspects of market risk and counterparty default risk not covered by IAS 32 or IFRS 9, and risks from entities in other financial sectors.

Unlike the limited perspective of IFRS 7 and IFRS 17, however, the DZ BANK Group takes a **holistic view** when using risk management tools and when assessing the risk position. As a consequence, the groupwide risk management system covers not only the aforementioned risks but also business risk, reputational risk, and operational risk. This integrated approach is reflected in this risk report. By fully disclosing all material risks, their aggregation in the form of an economic aggregate risk within the meaning of GAS 20.160, and a comparison of the economic aggregate risk with the risk coverage potential, the DZ BANK Group aims to present its economic capital adequacy clearly and understandably in accordance with GAS 20.161 (in conjunction with GAS 20.A1.22 and GAS 20.A2.20) and IAS 1.135 (d).

In preparing this risk report, DZ BANK also takes account of the **recommended risk-related disclosures** issued by the Financial Stability Board (FSB), the European Banking Authority (EBA), and the European Securities and Markets Authority (ESMA) that are designed to improve the usefulness of disclosures in the decision-making process.

The quantitative disclosures in this risk report are based on information that is presented to the Board of Managing Directors and used for internal management purposes (known as the **management approach** in accordance with GAS 20.31, GAS 20.116, and IFRS 7.34(a)). The disclosure of this information, which is important for knowledgeable users, is designed to ensure that external reporting is useful when such users need to make decisions.

The details relating to **DZ BANK** are included in the risk report for the **DZ BANK Group**. A separate risk report is not prepared for DZ BANK. Unless stated otherwise, the disclosures relating to the DZ BANK Group and the Bank sector also apply to DZ BANK.

Detailed information on individual **subsidiaries of DZ BANK** is only provided in this risk report if the subsidiaries are of material significance to risk management, risk factors, or the risk position and if the situation in the subsidiaries differs substantially from the position of the DZ BANK Group as a whole. However, subsidiaries are mentioned where this is necessary to explain the amount, structure, and management of the risks in the DZ BANK Group, and the changes in these risks.

References in this risk report to **governing bodies** (Board of Managing Directors and Supervisory Board), **committees**, or **organizational units** relate to DZ BANK. If the governing bodies, committees, or organizational units of subsidiaries are meant, however, this is indicated by stating the name of the relevant subsidiary.

In accordance with GAS 20.A1.3 and GAS 20.A2.3, the **structure** of the risk report is based on the risk types (chapters VI.8 to VI.21). The risk type-specific disclosures are preceded by general information and information relating to all risk types (chapters VI.1 to VI.7).

# DZ BANK Group

## 2 Summary

### 2.1 Risk management system

#### 2.1.1 Regulatory framework for risk management

The DZ BANK Group's risk management system takes into account the statutory requirements specified in section 25 (1) of the German Supervision of Financial Conglomerates Act (FKAG) in conjunction with section 25a of the German Banking Act (KWG) and the German Minimum Requirements for Risk Management for Banks and Financial Services Institutions (MaRisk BA). Furthermore, in light of the different business models in place in parts of the DZ BANK Group, other specific legal requirements have also been observed. These include sections 26 and 27 of the German Act on the Supervision of Insurance Undertakings (VAG) in conjunction with the German Minimum Requirements for the System of Governance of Insurance Undertakings (MaGo) and section 28 of the German Capital Investment Code (KAGB) in conjunction with the German Minimum Requirements for Risk Management for Investment Management Companies (KAMaRisk).

When the DZ BANK Group and its subsidiaries designed the risk management system, they followed the guidance provided by the EBA and the European Insurance and Occupational Pensions Authority (EIOPA), together with the pronouncements of the Basel Committee on Banking Supervision (BCBS) and the FSB on risk management issues.

#### 2.1.2 Fundamental features of risk management

**Risks** result from adverse developments affecting financial position or financial performance, and essentially comprise the risk of an unexpected future liquidity shortfall or unexpected future losses. A distinction is made between liquidity and capital. Risks that materialize can affect both of these resources.

Both the DZ BANK Group and DZ BANK and its subsidiaries have a **risk management system** that is updated on an ongoing basis in line with changes to the business and regulatory environment. The risk management system is designed to enable them to identify material risks – particularly risks to their ability to continue as a going concern – at an early stage and to initiate the necessary control measures. The main elements of the risk management system are organizational arrangements, methods, IT systems, the limit system based on economic risk-bearing capacity, stress testing of all material risk types, and internal reporting.

The risk management system is based on the **risk appetite statement** – the fundamental document for determining risk appetite in the DZ BANK Group – and the specific details and additions set out in **risk strategies**, which are consistent with the business strategy and are approved by the Board of Managing Directors. The risk appetite statement contains risk policy guidelines and strategy requirements that are applicable throughout the group. It also sets out quantitative requirements reflecting risk appetite.

The DZ BANK Group strives to avoid **concentrations of risk** that are not the conscious result of business policy.

The methods used to **measure risk** are an integral element of the risk management system. They are regularly reviewed, refined where necessary, and adapted to changes in internal and external requirements. Risk model calculations are used to manage the DZ BANK Group.

The tools used for the purposes of risk management are also designed to enable the DZ BANK Group to respond appropriately to **significant market movements**. For example, the market data used for the centralized, model-driven measurement of market risk is updated every trading day and significant market movements therefore lead to an immediate increase in the volatility of risk factors and, consequently, changes in market risk. In addition, changes in credit ratings and correlations affect the modeled level of credit risk. Conservative crisis

scenarios for short-term and medium-term liquidity are intended to ensure that liquidity risk management takes adequate account of market crises.

### 2.1.3 Management units and sectors

Risk is managed groupwide on a consolidated basis and includes all entities in the DZ BANK Group. DZ BANK and its material subsidiaries – material in terms of their contribution to the DZ BANK Group's aggregate risk; also referred to below as management units – are directly incorporated into the group's risk management system, and managed, on the basis of the material risk types.

From a risk perspective, the 'DZ BANK' management unit equates to the central institution and corporate bank operating segment and the holding function. The non-material subsidiaries and investee entities of DZ BANK are integrated into the risk management system either directly as part of other types of risk or indirectly as part of equity investment risk. How they are integrated is decided annually.

Where a subsidiary defined as a management unit acts as the parent company of a subgroup, the entire subgroup comprising the parent company plus its subsidiaries and second-tier subsidiaries is considered to be the management unit. This means that the subsidiaries, second-tier subsidiaries, and investees of the DZ BANK subsidiaries are also included in the DZ BANK Group's risk management system – indirectly via the entities that are included directly – with due regard to the minimum standards applicable throughout the group.

The management units represent the operating segments in the consolidated financial statements and form the core of the financial services group.

The **insurance business** operated at R+V differs in material respects from the other businesses of the DZ BANK Group. For example, actuarial risk is subject to factors that are largely different from those affecting the risks typically assumed in banking business. Furthermore, policyholders have a share in any gains or losses from investments in connection with life insurance, health insurance, and casualty insurance as specified under statutory or contractual arrangements, and this must be appropriately taken into account in the measurement of risk. Not least, the supervisory authorities also treat banking business and insurance business differently and this is reflected in differing regulatory regimes for banks and insurance companies.

Two sectors – Bank sector and Insurance sector – have been created within the DZ BANK Group for the purposes of **economic risk management**. The management units are assigned to these sectors as follows:

#### **Bank sector:**

- DZ BANK
- BSH
- DZ HYP
- DZ PRIVATBANK
- TeamBank
- UMH
- VR Smart Finanz

#### **Insurance sector:**

- R+V

In the context of quantitative disclosures on the economic and the regulatory (normative) risk-bearing capacity of the DZ BANK Group and the DZ BANK financial conglomerate, the abbreviation R+V as used in this risk report refers to the R+V Versicherung AG insurance group for regulatory purposes. In contrast to the R+V subgroup defined in chapter I.3.1 of the group management report and chapter I.2.1 of the management report, the regulatory R+V Versicherung AG insurance group also comprises KRAVAG-SACH Versicherung des Deutschen Kraftverkehrs VaG, Hamburg.

The subject of **normative risk management** is the DZ BANK banking group as defined in accordance with section 10a KWG in conjunction with articles 11 and 18 of the Capital Requirements Regulation (CRR). The DZ BANK banking group consists of DZ BANK as the superordinated entity plus other institutions, financial institutions, and ancillary services undertakings that qualify as subsidiaries according to article 4 (1) no. 16 CRR. These entities essentially represent the Bank sector. Other subsidiaries that are consolidated for regulatory purposes are not included in the regulatory risk report owing to their minor significance. Equally, insurance companies and companies not in the financial sector are not part of the banking group for regulatory purposes. R+V is fully consolidated for commercial-law purposes but is not included in the banking group for regulatory purposes.

#### 2.1.4 Liquidity waiver

**DZ BANK** and **DZ HYP** have elected to apply the **liquidity waiver** pursuant to article 8 CRR. The waiver enables the LCR and NSFR to be applied at the level of a single liquidity subgroup consisting of DZ BANK and DZ HYP. This means that it is no longer necessary to comply with the regulatory liquidity requirements at the level of the two individual institutions.

Furthermore, **DZ HYP** has applied the **capital waiver** pursuant to section 2a (1), (2), and (5) KWG in conjunction with article 7 (1) CRR, under which – provided certain conditions are met – regulatory supervision at individual bank level may be replaced by supervision of the entire banking group.

#### 2.1.5 KPIs

Risks affecting liquidity and capital resources are managed on the basis of groupwide liquidity risk management and groupwide risk capital management. The purpose of **liquidity risk management** is to ensure adequate levels of liquidity reserves are in place in respect of risks arising from future payment obligations (liquidity adequacy). The aim of **risk capital management** is to ensure the availability of capital resources that are commensurate with the risks assumed (capital adequacy).

The key risk management figures used in respect of **liquidity** are

- the minimum liquidity surplus;
- the structural minimum liquidity surplus;
- the liquidity coverage ratio (LCR); and
- the net stable funding ratio (NSFR).

The key risk management figures used in respect of **capital** are

- economic capital adequacy;
- the coverage ratio for the financial conglomerate;
- the regulatory capital ratios;
- the leverage ratio; and
- the metrics for the minimum requirement for own funds and eligible liabilities (MREL), which are the MREL ratio as a percentage of risk-weighted assets, the MREL ratio as a percentage of the leverage ratio exposure, the subordinated MREL ratio as a percentage of risk-weighted assets, and the subordinated MREL ratio as a percentage of the leverage ratio exposure.

#### 2.1.6 Specific features of sustainability risk management

The entities in the DZ BANK Group do not classify events or circumstances in the climate-related and environmental ('E'), social ('S'), or corporate governance ('G') spheres as a risk type in their own right. Instead, they view them as drivers of the financial and non-financial risk types that are managed in the internal liquidity adequacy assessment process (ILAAP) and the internal capital adequacy assessment process (ICAAP). Risks triggered by sustainability risk factors are also referred to as sustainability risks below.

The **regulatory basis** for managing sustainability risks comprises the European Central Bank (ECB) guide on climate-related and environmental risks, the EBA guidelines on loan origination and monitoring, the Minimum Requirements for Risk Management (MaRisk), the Guidance Notice on Dealing with Sustainability Risks issued by

the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin) [German Federal Financial Supervisory Authority], and the delegated regulation on the EU taxonomy.

Sustainability risks stem from risk factors affecting climate-related and environmental, social, or corporate governance matters. There are two ways of considering them:

- The ‘inside-out’ or impact perspective concentrates on the direct effects that the business activities of the DZ BANK Group have on the environment and society.
- The ‘outside-in’ or risk perspective considers the influence that ESG-related developments have on the DZ BANK Group.

This risk report is based on the **outside-in perspective**.

Sustainability risks are managed **centrally** at the level of the DZ BANK Group and on a **decentralized basis** at the level of DZ BANK and its material subsidiaries.

Different **time horizons** are considered in the management of sustainability risks. Whereas some risk factors, such as extreme weather events and regulatory changes, can have an effect in the short to medium term, others take effect over a much longer time horizon. A short-term time horizon is considered to be up to 1 year, which is in line with the time horizon used in the ICAAP economic perspective. The medium-term horizon is between more than 1 year and up to 4 years. This is consistent with the strategic planning horizon. Longer periods are considered to be long term.

**ESG data** is very important for regulatory purposes and for integrating sustainability matters into the bank’s business processes. With this in mind, a number of activities have been initiated as part of the DZ BANK Advancing Sustainability program that are ensuring the availability of the required data in different ways. Examples include methods for assessing sustainability risk such as carbon accounting and ESG risk scoring, the procurement of data from external data providers, and the definition of architectural guidelines in the sustainability program.

## 2.2 Risk factors and risks

The entities in the DZ BANK Group are exposed to a number of risk factors. These include developments concerning the entities’ environment that may have an adverse impact on the future financial position or financial performance of the DZ BANK Group and DZ BANK. Risk factors either affect multiple types of risk (general risk factors) or are limited to specific types of risk (specific risk factors). Disclosures on **general risk factors** can be found in chapter VI.5. The **specific risk factors** are shown in the risk-type-specific chapters of this risk report.

The main features of the directly managed **risks** in the Bank and Insurance sectors and how they break down across the **operating segments** reported in note 32 of the notes to the consolidated financial statements are shown in Fig. VI.1 and Fig. VI.2 respectively. The risks shown there – broken down by financial and non-financial risks – correspond to the outcome of the risk inventory check and reflect the risks that are material to the DZ BANK Group.

To ensure that the presentation of the disclosures remains clear, the risk management system disclosures included in the risk report are limited to the main material entities in the group (indicated in Fig. VI.1 by a dot on a dark gray background). This selection is based on a **materiality assessment**, which takes into account the contribution of each management unit to the DZ BANK Group’s overall risk for each type of risk. However, the figures presented in the risk report cover all the management units included in the internal reporting system (indicated additionally in Fig. VI.1 by a dot on a light gray background).

## 2.3 Risk profile and risk appetite

The DZ BANK Group’s **business model** and the associated business models used by the management units (see chapter I.1 of the (group) management report) determine the risk profile. The main risks associated with the business models are shown in Fig. VI.1 and Fig. VI.2. The businesses operated by the management units that

have a significant impact on the risk profile are described under 'Business background and risk strategy' within the chapters of the risk report covering the different risk types.

The values for the measurement of **liquidity and capital adequacy** presented in Fig. VI.3 and Fig. VI.4 reflect the liquidity risks and the risks backed by capital assumed by the DZ BANK Group. They illustrate the **risk profile** of the DZ BANK Group. The values for these KPIs are compared against the (internal) threshold values specified by the Board of Managing Directors – also referred to below as **risk appetite** – and against the (external) minimum targets laid down by the supervisory authorities. The KPIs are explained in more detail later in this risk report.

These **observation thresholds** mark the transition point from a comfortable risk situation to a state of heightened alert, whereas the **minimum thresholds** represent a mandatory internal limit that must be maintained. Both thresholds are elements of the risk appetite statement. The internal minimum thresholds in the risk appetite statement largely represent the warning thresholds in the recovery plan. They are defined by the Board of Managing Directors and presented to the Risk Committee of DZ BANK's Supervisory Board for acknowledgement. Depending on the situation and significance, the Chief Risk Officer, the Chief Financial Officer, the relevant committee of the Board of Managing Directors, or the full Board of Managing Directors may initiate operational corrective measures if observation thresholds are crossed. If the minimum thresholds are crossed, the escalation mechanisms set out in the recovery plan are triggered.

#### 2.4 Solvency and risk-bearing capacity

The **solvency** of DZ BANK and its subsidiaries was never in jeopardy at any point during the reporting period. They also complied with regulatory requirements for liquidity adequacy. By holding ample liquidity reserves, the group aims to be able to protect its liquidity against any threats in the event of a crisis.

The DZ BANK Group remained within its economic **risk-bearing capacity** in 2024 and also complied with regulatory requirements for capital adequacy on every reporting date.

<sup>1</sup> Apart from migration risk on traditional loans, which are covered by the capital buffer.

<sup>2</sup> Including business risk and reputational risk of BSH.

<sup>3</sup> The Bank sector's reputational risk is contained in the risk capital requirement for business risk. BSH's reputational risk, which is covered mainly by the technical risk of a home savings and loan company, is not included here.

| <b>Normative perspective</b>                                                     |                 |               |                         |       |                                |       |
| Liquidity coverage ratio (LCR) of the liquidity subgroup (percent) <sup>2</sup>  | 138.6           | 143.1         | 100.0                   | 100.0 | 120.0                          | 115.0 |
| Net stable funding ratio (NSFR) of the liquidity subgroup (percent) <sup>3</sup> | 119.0           | 119.0         | 100.0                   | 100.0 | 106.0                          | 106.0 |
| <b>CAPITAL ADEQUACY</b>                                                          |                 |               |                         |       |                                |       |
| <b>Normative perspective<sup>4</sup></b>                                         |                 |               |                         |       |                                |       |
| Common equity Tier 1 capital ratio (percent)                                     | 14.6            | 14.6          | 7.7                     | 7.7   | 10.3                           | 10.3  |
| Tier 1 capital ratio (percent)                                                   | 17.5            | 17.6          | 9.2                     | 9.2   | 11.8                           | 11.8  |
| Total capital ratio (percent)                                                    | 21.2            | 21.4          | 11.2                    | 11.2  | 13.8                           | 13.8  |
| Leverage ratio (percent)                                                         | 6.7             | 6.8           | 3.0                     | 3.0   | 4.3                            | 4.3   |

1 For details, see chapter VI.6.2.7.

2 For details, see chapter VI.6.3.2.

3 For details, see chapter VI.6.3.3.

4 For details, see chapter VI.7.4.3.

### 3 Risk-oriented corporate governance

#### 3.1 Risk culture

The DZ BANK Group's risk culture is shaped by the high degree of responsibility assumed by the Cooperative Financial Network for its members and for society, by the values of sustainability, stability, and diversity, and by a strong culture of dialogue. The priority for the day-to-day handling of risk is compliance with strategic and associated operating requirements.

The following **principles** apply in respect of the day-to-day handling of risk:

- **Leadership culture:** The management must set out clear expectations regarding the handling of risk and lead by example.
- **Risk appetite:** Every individual at DZ BANK must understand their role and their part in the risk management system; they must assume responsibility for their decisions in line with the risk appetite specified by the Board of Managing Directors.
- **Communications:** Internal communications must be open and consensus-based. Alternative opinions must be respected and employees encouraged to analyze risk transparently.
- **Employees and expertise:** Employees must bear responsibility for conscious handling of risk. They must use the available expertise and undertake continuing professional development in a changing environment.
- **Change management:** DZ BANK must learn from past experience and ensure the business model is sustainable by managing change proactively.

The key features of the risk culture are documented in a framework, which is available to all employees of DZ BANK.

#### 3.2 Risk appetite statement

The entities in the DZ BANK Group define risk appetite as the nature and extent of the risks that will be accepted at group level or by the management units within their risk capacity when implementing their business models and business objectives. The term 'risk appetite' equates to the term 'risk tolerance' used by the supervisory authorities in a disclosure context. Risk capacity is the maximum risk that the DZ BANK Group can take on based on its capital adequacy, liquidity adequacy, capacity for risk management and control, and regulatory restrictions. Risk capacity is therefore largely determined by the DZ BANK Group's available internal capital, own funds, and available liquid assets. Risk capacity should always exceed risk appetite. The difference between risk capacity and risk appetite reflects the DZ BANK Group's need for security.

The risk appetite statement formulates risk policy principles on risk tolerance in the DZ BANK Group. The principles are overarching statements that are consistent with the business model and the risk strategies. The qualitative principles are supplemented by quantitative key figures, for which threshold values are set internally. The values for the KPIs and the internal threshold values are shown in Fig. VI.3. One of these principles and several threshold values in the risk appetite statement relate to sustainability risks. The overall risk report is used to monitor the internal threshold values.

#### 3.3 Risk strategies

The **systematic controlled assumption of risk in relation to target returns** is an integral part of corporate control in the DZ BANK Group and at DZ BANK. The activities resulting from the business model require the ability to identify, measure, assess, manage, monitor, and communicate risks. The need to hold appropriate reserves of cash and to cover risks with adequate capital is also recognized as an essential prerequisite for the operation of the business and is of fundamental importance.

For each of the material risks, the Board of Managing Directors draws up risk strategies that are linked to the **business strategy**. The risk strategies each encompass the main risk-bearing business activities, the objectives of risk management (including the requirements for accepting or preventing risk), and the action to be taken to attain the objectives. The risk strategies are each valid for one calendar year.

The annual updating of the risk strategies is integrated with the **strategic planning process** and is carried out by the Group Risk Controlling, Group Risk Control & Services, and Group Finance divisions in close consultation with other relevant divisions at DZ BANK and its subsidiaries.

The risk strategies are described in the chapters covering the individual risk types in this risk report. The strategic focus of the DZ BANK Group and DZ BANK that underlies the risk strategies is described in chapter I.1 of the (group) management report.

### 3.4 Governance structure of risk management

The DZ BANK Group's **risk management system** builds on the risk appetite statement and risk strategies. It is based on three lines of defense that are interlinked and well established in the monitoring and control environment. Fig. VI.5 shows the governance structure of risk management. R+V has implemented a modified governance structure because it is subject to different regulatory requirements.

FIG. VI.5 – GOVERNANCE STRUCTURE OF RISK MANAGEMENT IN THE DZ BANK GROUP

<sup>1</sup> The names reflect corporate functions; they are not necessarily identical to the names of these functions in the organizational structure.

The **three-lines-of-defense model** clarifies the understanding of risk management within the DZ BANK Group and sets out the roles and responsibilities. The interaction between the three lines of defense is intended to provide the basis for effective groupwide risk management. The tasks of the individual lines of defense are as follows:

#### First line of defense:

- Day-to-day assumption and management of risk; related reporting to the Board of Managing Directors

#### Second line of defense:

- Establishment and enhancement of a framework for risk management
- Monitoring of compliance with the framework in the first line of defense and related reporting to the Supervisory Board and Board of Managing Directors
- Second vote in credit decisions as defined in MaRisk BA and other specific legal requirements, such as KAMaRisk
- Development and monitoring of principles for compliance with data protection requirements and structuring and monitoring of corporate security and external procurement management (referred to as outsourcing management at the level of the DZ BANK Group). These rules do not limit the data protection officers' freedom to operate independently.
- The tasks listed are primarily carried out by the Group Risk Controlling, Group Risk Control & Services, Credit, and Compliance divisions. They are also part of the remit of the Group IT Governance department.
- The Group Risk Controlling, Group Risk Control & Services, and Credit divisions together form the risk management function.

#### Third line of defense:

- Process-independent examination and assessment of risk management and control processes in the first and second lines of defense
- Reporting to the Board of Managing Directors, Supervisory Board, Audit Committee and, where appropriate, the Risk Committee
- Communication with external control functions
- Tasks in the third line of defense are primarily carried out by Group Audit.

Independent auditors, together with supervisory authorities, form the **external control functions** and these functions regularly hold discussions with all three lines of defense. The supervisory authorities can specify key points to be covered by independent auditors in their audits of financial statements. The auditors report to the supervisory authorities on the findings of their audits of financial statements and special audits.

Risk management is an integral component of governance and is therefore taken into account in the general management approach, in the management of subsidiaries via appointments to key posts, and in the DZ BANK Group's committees. The governance of the DZ BANK Group is described in chapter I.2.2 of the (group) management report.

### 3.5 Risk management committees

The **Group Risk and Finance Committee**, the **Risk Committee**, and the **Asset/Liability Committee** are the main committees responsible for risk management in the DZ BANK Group and at DZ BANK. The Supervisory Board's Risk Committee is also updated about the risk situation.

The organization and remit of the main committees responsible for risk management are described in chapter I.2.2.3 of the (group) management report.

### 3.6 Risk management

Risk management refers to the operational **implementation of the risk strategies** based on standards applicable throughout the group. The management units make conscious decisions on whether to assume or avoid risks. They must observe guidelines and risk limits specified by the head office. The divisions responsible for risk management in the first line of defense are separated in terms of both organization and function from the divisions in the second and third lines of defense.

### 3.7 Risk control

The Group Risk Controlling and Group Risk Control & Services divisions, which form DZ BANK's central risk control function, are responsible for **identifying, measuring, and assessing** risk in the DZ BANK Group. This role includes early detection, full recording of data (to the extent that this is possible), and internal monitoring for all material risks. The risk control function lays down the fundamental requirements for the risk measurement methods to be used throughout the group and coordinates implementation with the risk control functions in the other management units. This structure is designed to ensure that risk is managed consistently throughout the group. DZ BANK's risk control function also draws up groupwide rules for the credit risk processes.

Both at DZ BANK and in the other management units, the risk control function is responsible for the transparency of risks assumed and aims to ensure that all risk measurement methods used are up to date. In cooperation with the other management units, the risk control function at DZ BANK therefore prepares groupwide **risk reports** covering all material types of risk. The risk reports are compiled for the Supervisory Board and the Board of Managing Directors and for the other management units.

The risk control units in the management units **monitor** compliance with the limits defined for the minimum liquidity surplus and with the entity-related limits that have been set based on the risk capital allocated by DZ BANK.

### 3.8 Credit back-office division

The Credit divisions of the entities in the Bank sector form the back office within the meaning of MaRisk BA. They are responsible for aspects of identifying, measuring, monitoring, and managing credit risk. These aspects include analyzing the risk (including producing ratings), approving or rejecting a credit decision with the back office's 'second vote', ensuring compliance with the credit risk strategy, and identifying and appropriately assessing the risks from loans to members of the governing bodies.

The responsibilities of the back office also comprise the ongoing monitoring of loan exposures, including identifying and processing non-performing exposures and deciding on measures to be implemented if limits are exceeded, as well as the management of loan collateral. In the case of exposures that are relevant for management, the exposure throughout the group is taken into account and appropriate management guidance is given to the management units.

### 3.9 Compliance

#### 3.9.1 Compliance function

The Board of Managing Directors of DZ BANK and the Boards of Managing Directors of the other management units are responsible for compliance with legal provisions and requirements and with the principles and measures implemented for this purpose. To fulfill these duties, the Boards of Managing Directors generally appoint an independent compliance function.

The main tasks of the compliance function are to identify, manage, and mitigate compliance risk in order to protect customers, the entities in the DZ BANK Group, and their employees against breaches of legal provisions and requirements. The compliance function is also responsible for mitigating risks arising from non-compliance with the legal provisions and requirements. Other tasks of the compliance function are to keep senior management up to date with new regulatory requirements and to advise the departments on implementing new provisions and requirements.

In accordance with the requirements of the Supervisory Review and Evaluation Process for Basel Pillar 2 (SREP), there is a single compliance framework for the material entities in the DZ BANK Group. This framework lays down rules on cooperation between the individual compliance functions and sets out their authority and responsibilities. The compliance framework comprises the compliance policy of the DZ BANK Group and compliance standards.

The compliance policy sets out requirements for establishing and organizing the compliance functions and details of their duties. It is supplemented by compliance standards, which specify how to implement these requirements at an operational level. If individual requirements in the compliance standards cannot be fulfilled by a management unit, for example because they conflict with local rules or special legal requirements, the affected management unit must provide an explanation. Special circumstances may arise because R+V is subject to different legal and regulatory requirements. The DZ BANK Group's compliance framework is reviewed annually and on an ad hoc basis to check that it is up to date.

The entities of the DZ BANK Group that are subject to the German Supply Chain Due Diligence Act (LkSG) have taken steps to implement the relevant requirements. DZ BANK, for example, has created the role of human rights officer.

Further disclosures relating to compliance risk can be found in chapters VI.14.6.1 and VI.20.4.1.

### 3.9.2 Code of conduct

The risk culture principles (see chapter VI.3.1) are mirrored in the DZ BANK Group's code of conduct. The code of conduct represents a framework for the group entities. Its content is implemented in the management units by means of internal regulations and policies that are tailored to their respective core businesses and entity-specific requirements.

The code of conduct encompasses the responsibility to stakeholders who are directly affected by the management unit concerned. These stakeholders include customers, business partners, shareholders, and employees. Compliance with social and ethical standards also forms part of the code of conduct, as do aspects of sustainability.

The subsidiaries of DZ BANK have undertaken to comply with DZ BANK's standards on preventing money laundering, the financing of terrorism, and other criminal offenses where required by law. The measures required by the German Anti-Money Laundering Act (GwG) have been put in place and implemented. They are reviewed regularly to check that they are up to date and, if necessary, amended. No corruption is tolerated, either in the entities of the DZ BANK Group or at business partners or other third parties. The DZ BANK Group implements appropriate organizational arrangements designed to ensure compliance with all applicable sanctions and embargoes.

### 3.9.3 Data protection

The entities in the DZ BANK Group have introduced suitable precautions aimed at ensuring that they comply with data protection provisions relating to customers, business partners, and employees. The data protection officers required by law have been appointed and their names have been submitted to the competent data protection authorities. Standard data protection principles have been issued within the DZ BANK Group. In addition, employees regularly receive updates on the currently applicable data protection provisions.

In the management units, independent data protection officers report to the relevant Board of Managing Directors. The Data Protection Officers working group in the DZ BANK Group generally meets three times a year. The working group deals with current issues relating to data protection.

## 3.10 Corporate security

The entities in the DZ BANK Group take into account the relevant regulatory requirements in the following areas of corporate security:

- Information security
- Business continuity management (contingency and crisis management)

The regulatory requirements are implemented in all of the group's subsidiaries by means of written specifications and compliance is monitored by DZ BANK.

### 3.10.1 Information security

The aim of information security is to safeguard the confidentiality, integrity, authenticity, and availability of the data and information (information assets) used in business processes. Technical and organizational measures must be taken to adequately protect these information assets against unauthorized access, disclosure, or modification and against loss or theft.

To manage information security, the **DZ BANK Group** has established a groupwide information security management system (Group ISMS) based on ISO/IEC 27001:2022.

**DZ BANK** has implemented an information security management system (ISMS). The rules that it contains, along with the methodological framework that it provides, are also based on the ISO/IEC 27001:2022 standard. The ISMS is designed to ensure the confidentiality, integrity, availability, and authenticity of the data and information (information assets) used in DZ BANK's core processes, management processes, and support processes. The governance model implemented defines the methods, processes, roles, responsibilities, authority, and reporting channels that are necessary to achieve the strategic objectives and carry out the tasks of information security at operational level. It also provides an operational framework for the consistent quantitative and qualitative evaluation and management of information security risk, which forms part of operational risk.

Further disclosures relating to information risk, including ICT risk, can be found in chapters VI.14.6.3 and VI.20.4.2.

### 3.10.2 Business continuity management

A groupwide business continuity management system has been set up to implement regulatory requirements throughout the group and to mitigate security risk relating to time-critical processes. Group standards are applied to address the regulatory minimum requirements for this system, and a governance process is used to track compliance with the standards.

At DZ BANK, business continuity management provides structures and methodologies that will enable time-critical business processes to be maintained should an emergency arise (dealing with emergencies). Measures to protect people, premises, and assets are also developed and implemented (preventing emergencies). In this way, DZ BANK aims to ensure that it can maintain its operations in the event of emergencies, even though the level of activity may have to be reduced. This applies particularly if there are situations in which whole groups of individuals, significant parts of the buildings or IT infrastructure, or the procurement of services are affected.

At DZ BANK, time-critical business processes are identified in accordance with the rules of the head-office team for business continuity management using business impact analyses and protected by business continuity planning. DZ BANK's business continuity management system has been certified in accordance with the ISO 22301 standard.

Further disclosures relating to security risk can be found in chapters VI.14.6.4 and VI.20.4.3.

## 3.11 Outsourcing management

At DZ BANK, the Central Outsourcing Management unit acts as the central point of contact for all issues relating to risk management for external procurement. This includes outsourcing and management-relevant external procurement (external procurement of IT services and other purchases from third parties). The Central Outsourcing Management unit is responsible for developing, introducing, and monitoring the framework specifications as well as for appropriately implementing the statutory requirements in respect of regulated external procurement at DZ BANK.

The sector-wide rules on outsourcing management include general requirements for the management units in the Bank sector to ensure that the management of outsourcing is largely standardized throughout the DZ BANK Group. The Insurance sector is subject to separate regulatory requirements that are described in internal guidance issued by R+V.

Further disclosures relating to outsourcing risk can be found in chapters VI.14.6.5 and VI.20.4.4.

### 3.12 Control functions

#### 3.12.1 Internal audit

The internal audit departments of the management units are responsible for control and monitoring tasks. Independently of individual processes and with a focus on risk, they review and assess compliance with statutory and regulatory requirements and the effectiveness and appropriateness of risk management in general and the internal control system in particular. They also check that all activities and processes are carried out properly, regardless of whether they are outsourced or not. The internal audit departments also ensure that problems identified in audit findings are rectified.

The internal audit departments at the entities in the DZ BANK Group report to the chief executive officer or other senior managers of the entity concerned.

DZ BANK's internal audit department is responsible for internal audit tasks at group level. These tasks include, in particular, the design and coordination of audits involving multiple entities, the implementation of which lies within the remit of the individual internal audit departments in the management units concerned, and the evaluation of individual management unit audit reports of relevance to the group as a whole. Cooperation between internal audit departments in the DZ BANK Group is governed by general parameters, the operational details of which are set out in a separate group audit manual. DZ BANK's internal audit department also carries out audit activities for selected subsidiaries under service agreements.

#### 3.12.2 Supervisory Board

The Board of Managing Directors reports in detail to the Supervisory Board of DZ BANK once a year about the updating of the risk strategies and the status and further development of the risk management system of DZ BANK and the DZ BANK Group. Using the monthly and quarterly overall risk reports, the Board of Managing Directors reports to the Supervisory Board about the risk situation four times a year. At the same intervals, the Board of Managing Directors also reports portfolio-specific and exposure-specific management information and reports on the credit portfolio using the credit risk report. The Supervisory Board is also regularly informed about significant investment exposures. The Supervisory Board discusses these issues with the Board of Managing Directors, advises it, and monitors its management activities. The Supervisory Board is involved in decisions of fundamental importance.

The Supervisory Board has set up a Risk Committee, which addresses issues related to overall risk appetite and risk strategy. The chairman of the Risk Committee reports to the full Supervisory Board four times a year on the material findings of the committee's work.

At least quarterly, the Board of Managing Directors makes the centrally produced risk reports available to the members of the Risk Committee and the other members of the Supervisory Board. The chairman of the Risk Committee informs the full Supervisory Board about the main content of these reports no later than at its next meeting. In addition, the Audit Committee regularly examines the effectiveness of the internal control system, risk management system, and internal audit. It passes on important information to the other Supervisory Board members in the Audit Committee Chairman's reports at Supervisory Board meetings and by distributing the minutes from Audit Committee meetings to the other Supervisory Board members.

### 3.12.3 External control functions

Independent **auditors** carry out audits pursuant to section 29 (1) sentence 2 no. 2a KWG in conjunction with section 25a (1) sentence 3 KWG in relation to the risk management system, including the internal control functions, of the entities in the Bank sector. For the Insurance sector, an audit of the Solvency II balance sheet is carried out pursuant to section 35 (2) VAG and an audit of the early-warning system for monitoring risks that may jeopardize the ability to continue as a going concern, including the internal monitoring system of R+V, is carried out pursuant to section 35 (3) VAG in conjunction with section 317 (4) HGB and section 91 (2) of the German Stock Corporation Act (AktG).

The **supervisory authorities**, particularly the banking and insurance supervisory authorities, also conduct risk-based audits.

### 3.13 General internal control system

The objective of the internal control systems operated in the entities of the DZ BANK Group is to ensure the effectiveness and efficiency of business activity and compliance with the relevant legal provisions by means of suitable basic principles, action plans, and procedures.

**DZ BANK** has a bank-wide internal control system that is able to adapt to changing business and operating environments. The methodology of this control system is based on the Internal Control – Integrated Framework of the Committee of Sponsoring Organizations of the Treadway Commission (COSO), a comprehensive and internationally accepted framework for the appropriate design of internal control systems.

As part of the control system, regular updates and assessments are carried out in respect of the internal controls for reducing material risk in the business processes documented in the written set of procedural rules. The outcome of the assessments provides a statement on the appropriateness and effectiveness of the bank-wide internal control system for the Board of Managing Directors and Supervisory Board. The organizational and technical measures integrated into DZ BANK's operational and organizational structure are the starting point for the design of the controls.

The internal control system for the (consolidated) financial reporting process, which is described in chapter VI.3.14 below, is a sub-system of the bank-wide internal control system.

### 3.14 Internal control system for the (consolidated) financial reporting process

#### 3.14.1 Objective and responsibilities

DZ BANK is subject to a requirement to prepare consolidated financial statements and a group management report as well as separate financial statements and a management report. The primary objective of external (consolidated) financial reporting is to provide decision-useful information for the users of the reports. This includes all activities to ensure that (consolidated) financial reporting is properly prepared and that material violations of accounting standards – which could result in the provision of inaccurate information to users or in mismanagement of the group – are avoided with a sufficient degree of certainty.

In order to limit operational risk in this area of activity, the entities in the DZ BANK Group have set up internal control systems for the (consolidated) financial reporting process as an integral component of the control systems put in place for the general risk management process. In this context, the activities of employees, the implemented controls, the technologies used, and the design of work processes are structured to ensure that the objectives associated with (consolidated) financial reporting are achieved.

Overall responsibility for (consolidated) financial reporting lies with DZ BANK's Group Finance division, with all the consolidated entities in the DZ BANK Group responsible for preparing and monitoring the quantitative and qualitative information required for the consolidated financial statements.

#### 3.14.2 Instructions and rules

The methods to be applied within the DZ BANK Group in the preparation of the consolidated financial statements are set out in writing in a group manual. The methods to be applied within DZ BANK in the preparation of the separate financial statements are documented in a written set of procedural rules. Both of these internal documents are updated on an ongoing basis. The instructions and rules are audited to assess whether they remain appropriate and are amended in line with changes to internal and external requirements.

#### 3.14.3 Resources and methods for minimizing risk

The group's financial reporting process is decentralized. Responsibility for preparing and checking the quantitative and qualitative information required for the consolidated financial statements lies with the organizational units used for this purpose in the entities of the DZ BANK Group. DZ BANK implements the relevant controls and checks in respect of data quality and compliance with the DZ BANK Group rules.

The organizational units post the accounting entries for individual transactions. The consolidation processes are carried out by DZ BANK's Group Finance division and by the accounting departments of each entity in the DZ BANK Group. The purpose of this structure is to ensure that all accounting entries and consolidation processes are properly documented and checked.

Financial reporting, including consolidated financial reporting, is chiefly the responsibility of employees of DZ BANK and the other organizational units deployed for this purpose in the entities of the DZ BANK Group. If required, external experts are brought in for certain accounting-related calculations as part of the financial reporting process, such as determining defined benefit obligations and valuing collateral.

Consolidated financial reporting is based on mandatory workflow plans agreed between DZ BANK's Group Finance division and the individual accounting departments of the subsidiaries. These plans set out the procedures for collating and generating the quantitative and qualitative information required for the preparation of statutory financial reports. The plans also apply to the financial reports prepared for DZ BANK.

Generally accepted valuation methods are used in the preparation of the consolidated financial statements and group management report, and the separate financial statements and management report. These methods are regularly reviewed to ensure they remain appropriate.

In order to ensure the efficiency of the (consolidated) financial reporting system, the processing of the underlying data is extensively automated using IT systems. Control mechanisms are in place with the aim of ensuring the quality of processing and are one of the elements used to limit operational risk. (Consolidated) accounting input and output data undergoes automated and manual checks.

Business continuity plans have also been put in place. These plans are intended to ensure the availability of HR and technical resources required for the (consolidated) accounting and financial reporting processes.

#### 3.14.4 Information technology

The IT systems used for (consolidated) financial reporting have to satisfy the applicable security requirements in terms of confidentiality, integrity, availability, and authenticity. Automated controls are used to ensure that the processed (consolidated) accounting data is handled properly and securely in accordance with the relevant requirements. The controls in IT-supported (consolidated) accounting processes include, in particular, validation procedures to ensure consistent issue of authorizations, verification of master data modifications, logical access controls, and change management validation procedures in connection with developing, implementing, or modifying IT applications.

The IT infrastructure required for the use of electronic (consolidated) accounting systems is subject to the security controls implemented on the basis of the general IT security principles in the entities of the DZ BANK Group.

The information technology used for consolidated accounting purposes is equipped with the functionality to enable it to handle the journal entries in individual organizational units as well as the consolidation transactions carried out by DZ BANK's group accounting department and by the accounting departments in the subgroups.

IT-supported (consolidated) accounting processes are audited as an integral part of the internal audits carried out by the internal audit departments of the entities in the DZ BANK Group.

#### 3.14.5 Ensuring and improving effectiveness

The processes used are reviewed to ensure they remain appropriate and fit for purpose; they are adapted in line with new products, circumstances, or changes in statutory requirements. To guarantee and increase the quality of (consolidated) accounting in the entities of the DZ BANK Group, the employees charged with responsibility for financial reporting receive needs-based training in the legal requirements and the IT systems used. When statutory changes are implemented, external advisors and auditors are brought in to provide quality assurance for financial reporting. At regular intervals, the internal audit department audits the internal control system related to the process for (consolidated) financial reporting.

## 4 Risk management tools

### 4.1 Risk inventory check and appropriateness test

Every year, DZ BANK conducts a **risk inventory check**, the objective of which is to identify the types of risk that are relevant for the DZ BANK Group and assess the materiality of these risk types. According to need, a risk inventory check may also be carried out at other times in order to identify any material changes in the risk profile during the course of the year. The risks identified in the risk inventory check are broken down by financial and non-financial risk.

As part of the risk inventory check, a **materiality assessment** is carried out for those types of risk that could arise in connection with the operating activities of the entities in the DZ BANK Group. The next step is to assess the extent to which there are concentrations of risk types classified as material in the Bank sector, the Insurance sector, and across sectors.

The risk inventory check and the materiality assessment also cover the **sustainability risk factors** of relevance to the DZ BANK Group's main types of risk. With regard to the risks that are backed by capital, the three sustainability dimensions (climate-related and environmental risks, social risks, and corporate governance risks) are each divided into several risk factor categories. The materiality assessment for these risk factors is based partly on concentration analysis and partly on scenarios, which are used to gauge the significance of potential transmission channels for the risks that are backed by capital. If a quantitative assessment is not possible, inhouse experts on the individual risk types are consulted instead. This materiality assessment of sustainability risks is based both on internal risk concentration data and portfolio data and on external data sources. It differentiates between short-term, medium-term, and long-term effects on the types of risk backed by capital.

DZ BANK also conducts an annual **appropriateness test**, both for itself and at DZ BANK Group level. The appropriateness test may also be carried out at other times in response to specific events. The aim is to check whether the risk measurement methods used for all types of risk classified as material are in fact fit for purpose. The appropriateness test found that risk measurement in the DZ BANK Group is generally appropriate, although potential improvements were identified.

The risk inventory check and appropriateness test are coordinated in terms of content and timing between all management units in the DZ BANK Group. The findings from these processes are incorporated into the risk management process. In the material subsidiaries, risk inventory checks and appropriateness tests are generally conducted in a similar way to the approach used for the DZ BANK Group.

## 4.2 Risk manual

The risk manual, which is available to all employees of the management units, sets out the general parameters for identifying, measuring, assessing, managing, monitoring, and communicating risks. These general parameters are intended to ensure that risk management is properly carried out in the DZ BANK Group. The manual forms the basis for a shared understanding of the minimum standards for risk management throughout the group.

The material subsidiaries also have their own risk manuals covering special aspects of risk related specifically to these management units. R+V has Solvency II guidelines.

## 4.3 Internal risk reporting

Internal risk reporting by DZ BANK Group entities is based on regulatory requirements. These include, in particular, the principles for the effective definition, collection, and processing of risk data set forth by the BCBS in BCBS 239, as well as MaRisk BA and KAMaRisk.

The primary aim of internal risk reporting is establishing and enhancing transparency about risks to a company's ability to continue as a going concern, detecting them at an early stage, and monitoring them in the course of risk management. Taking account of the materiality of the exposures, the risk reports are intended to ensure that decision-makers and supervisory bodies receive transparent information on DZ BANK's risk profile and the risks for which they are responsible at all times. The management inputs derived from the internal risk reports feed into the strategic management decisions made by the Board of Managing Directors. Escalation mechanisms that build on the internal risk reports are intended to ensure prompt and appropriate responses to limit overruns.

DZ BANK's internal risk reporting comprises two pillars: standard reporting and special reporting:

- **Standard reporting** is characterized by recurring analyses and reports that are prepared for a predefined group of recipients at fixed intervals. These reporting processes are standardized in terms of input parameters, processing times and timing, and reporting formats.
- **Special reporting** is one-off or ad hoc reporting that can be triggered for a variety of reasons, such as internal or external data requests. The special reports also include ad hoc reports that are triggered when a specific threshold is reached.

Standard risk reporting in the DZ BANK Group has a material monitoring and oversight function based on the KPIs set out in the risk appetite statement.

The standard reports are either aggregated and cover all risk types or they are specific to an individual risk type. While the reports covering all risk types relate solely to the DZ BANK Group, risk type-specific reports are prepared at the level of both the DZ BANK Group and DZ BANK.

The **subsidiaries** have comparable reporting systems for all relevant types of risk.

Fig. VI.6 provides an overview of the main internal risk reports of DZ BANK.

<sup>1</sup> Standard reporting.  
<sup>2</sup> The reports listed are prepared as at June 30 and December 31.  
<sup>3</sup> Full Board of Managing Directors or individual members of the Board of Managing Directors.  
<sup>4</sup> Bank sector.  
<sup>5</sup> Covered by business risk in the reports covering all risk types.  
<sup>6</sup> Insurance sector.

## 4.4 Accounting basis for risk management

### 4.4.1 Accounting basis for risk measurement

The transaction data that is used to prepare the DZ BANK Group's consolidated financial statements forms the basis for the measurement of risk in the Bank sector and Insurance sector. Similarly, the transaction data used by the entities in the DZ BANK Group to prepare separate financial statements and subgroup financial statements is also used for the measurement of risk. A wide range of other factors are also taken into account in the calculation of risk. These factors are explained in more detail during the course of this risk report.

The line items in the consolidated financial statements significant to risk measurement are shown in Fig. VI.7. The information presented is also applicable to the measurement of risk for the separate financial statements of DZ BANK and the measurement of its risk, which does not include the technical risk of a home savings and loan company or the risks incurred by the Insurance sector.

The sections below provide a further explanation of the link between individual types of risk and the consolidated financial statements.

A further breakdown of the line items in the consolidated financial statements used to determine **credit risk** is given in chapter VI.8.7.2.

The investments used for the purposes of measuring **equity investment risk** are the following items reported in note 53 of the notes to the consolidated financial statements: shares and other shareholdings, investments in subsidiaries, investments in associates, and investments in joint ventures.

In the **Bank sector**, the measurement of financial instruments both for the purposes of determining market risk and for financial reporting purposes is based on market data provided centrally. Discrepancies in carrying amounts can arise from the differing treatment of impairment amounts in the measurement of market risk and in the accounting figures. They can also arise due to differences between the transaction price and acquisition-date fair value (day-one profit or loss). Day-one profit or loss is presented in note 72 of the notes to the consolidated financial statements. Differences can also arise because the market risk calculation measures bonds on the basis of issuer and credit spreads using available market data whereas the accounting treatment uses liquid bond prices. If no liquid prices are available for bonds, issuer and credit spreads are also used to measure bonds for accounting purposes. With the exception of these differences, the disclosures relating to **market risk** reflect the fair values of the assets and liabilities concerned.

The measurement of the **technical risk of a home savings and loan company** is based on the loans and advances to banks and customers (home savings loans) and also the home savings deposits (deposits from banks and customers) described in notes 61 and 62 of the notes to the consolidated financial statements.

Insurance contract liabilities, as reported in the financial statements, are a key value for determining all types of **actuarial risk**. The line item Investments held by insurance companies is used to determine all types of **market risk** and **counterparty default risk**. The line item Other assets is included in the computation of actuarial risk and counterparty default risk.

**Operational risk in the Bank sector, business risk** (Bank sector), and **reputational risk** (Bank sector and Insurance sector) are measured without a direct link to balance sheet line items reported in the consolidated financial statements. On the other hand, **operational risk in the Insurance sector** is based on insurance contract liabilities.

The calculation of **liquidity risk** is derived from future cash flows, which in general terms are determined from all of the on-balance-sheet and off-balance-sheet items in the consolidated financial statements.

#### 4.4.2 Accounting basis for risk coverage

The link between the counterbalancing capacity, which is used to determine economic liquidity adequacy, and the consolidated balance sheet is described in chapter VI.6.2.6.

The link between available internal capital, which is used to determine economic capital adequacy, and the consolidated balance sheet is covered in chapter VI.7.3.2.

<sup>1</sup> The details for liquidity risk are not provided here for reasons of clarity as liquidity risk is generally determined on the basis of all line items in the consolidated financial statements.

## 4.5 Risk measurement

### 4.5.1 Framework

Risk management in the DZ BANK Group is based on a **resource-oriented perspective of liquidity and capital**. The group uses this approach to implement the regulatory requirements ILAAP and ICAAP. This involves dovetailing between the economic and normative perspectives.

A distinction is also made between **economic and normative liquidity adequacy and between economic and normative capital adequacy**. The impact of each risk type on both economic capital and economic liquidity is taken into consideration. The effect and materiality of the various types of risk may vary, depending on the resource in question.

#### 4.5.2 Economic perspective

##### Economic liquidity adequacy

To ascertain the DZ BANK Group's economic liquidity adequacy, the minimum surplus cash that would be available based on the relevant key figures if various scenarios were to materialize – within the following year and in a longer period of up to 10 years – is determined as part of the measurement of liquidity risk. There is no capital requirement in connection with liquidity risk.

Concentrations of liquidity risk can occur primarily due to the accumulation of outgoing payments at particular times of the day or on particular days (concentrations of maturities), the distribution of funding across particular currencies, markets, products, and liquidity providers (concentrations of funding sources), and the distribution of liquidity reserves across particular currencies, ratings, and issuers (concentrations of reserves).

R+V (Insurance sector) is not material with regard to liquidity risk in the DZ BANK Group. This is because liquidity is typically tied up in liabilities with maturities of five years or more in insurance business.

##### Economic capital adequacy

Economic capital adequacy is an internally defined management perspective aimed at ensuring that all of the DZ BANK Group's material capital risks – determined using internal risk measurement methods on the assumption that the group will continue to operate as a going concern – are fully backed by capital plus an internally specified management buffer. The risk measurement methods used are designed to ensure that risk capital management is integrated across the group.

Owing to the close ties between risk management at DZ BANK and that of the DZ BANK Group, the economic capital adequacy of DZ BANK is indirectly managed through the economic capital adequacy of the DZ BANK Group.

Economic capital adequacy is calculated as the ratio of available internal capital to the economic aggregate risk of the DZ BANK Group. The economic aggregate risk is calculated as the sum of the risk capital requirement of the Bank sector, the overall solvency requirement of the Insurance sector, and the central economic capital buffer. Economic capital adequacy of 100 percent or higher indicates that the DZ BANK Group has economic risk-bearing capacity.

In the Bank sector, the **risk capital requirement** is calculated for credit risk, equity investment risk, market risk, the technical risk of a home savings and loan company, operational risk, and business risk in order to calculate economic capital adequacy. This risk capital requirement is generally calculated as value-at-risk with a holding period of 1 year and a confidence level of 99.9 percent. The capital requirement for the individual risk types is aggregated into the total risk capital requirement for the Bank sector taking into account various diversification effects. The diversified risk capital requirement reflects the interdependency of individual types of risk.

In the Insurance sector, risk measurement is based on the method specified in Solvency II with the aim of determining value-at-risk, which is the measure of economic capital. The value-at-risk for the change in economic own funds – also referred to as the **overall solvency requirement** – is determined with a confidence level of 99.5 percent over a period of 1 year.

The DZ BANK Group holds a capital buffer as a component of aggregate risk to allow for a possible lack of precision in the measurement of the risks backed by capital. A distinction is made between centralized and decentralized capital buffer requirements. The **centralized capital buffer** is managed on the basis of a limit covering all sectors and risk types. The **decentralized capital buffer requirements** are determined for the individual risk types in the Bank sector and the Insurance sector and are contained in the risk capital requirement (Bank sector) and in the overall solvency requirement (Insurance sector). To simplify matters, only the terms 'risk

capital requirement' and 'overall solvency requirement' will be used in the remainder of this risk report. These include the decentralized capital buffer requirement.

The risks relating to the Bank and Insurance sectors are aggregated, disregarding diversification effects between the sectors while taking account of the centralized capital buffer requirement.

#### 4.5.3 Normative perspective

The normative perspective is a forward-looking multi-year analysis of regulatory KPIs for liquidity adequacy and capital adequacy that are used for management purposes. It comprises the following management dimensions: monitoring of the actual figures for regulatory KPIs, liquidity planning, funding planning, capital planning, and adverse stress tests.

As is the case with the economic perspective, the normative perspective of **liquidity adequacy** relates to the DZ BANK banking group and the liquidity subgroup. No regulatory requirements for liquidity adequacy apply to the DZ BANK financial conglomerate.

The DZ BANK financial conglomerate is included in the normative perspective of **capital adequacy** in addition to the DZ BANK banking group and the liquidity subgroup.

#### 4.6 Risk concentrations

Based on an analysis of portfolios, the sector-specific and cross-sectoral identification of risk concentrations aims to identify potential downside risks that may arise from the accumulation of individual risks and, if necessary, to take corrective action. A distinction is made between risk concentrations that occur within a risk type (**intra-risk concentrations**) and concentrations that arise as a result of the interaction between different types of risk (**inter-risk concentrations**). Inter-risk concentrations are implicitly taken into account when determining correlation matrices for the purposes of inter-risk aggregation. They are mainly managed by using quantitative stress test approaches, which aim to provide a holistic view across all types of risk.

Standard processes are in place to manage **sector-specific risk concentrations**. Those processes are presented in the risk-type-specific chapters of this risk report. In the event of major, extraordinary events occurring in **cross-sectoral risk concentrations**, necessary management measures are initiated, coordinated, and monitored, for example by task forces made up of representatives from the risk management and risk control teams in the affected management units. The Board of Managing Directors is notified of such cases on an ad hoc basis. To support the cross-sectoral identification and management of risk, the members of the Board of Managing Directors of DZ BANK hold seats on the Supervisory Boards of its subsidiaries.

#### 4.7 Stress tests

In addition to the risk measurements, the effects of extreme but plausible events are also analyzed. Stress tests of this kind are used to establish whether the DZ BANK Group can sustain its business models, even under extreme economic conditions. Stress tests are carried out in respect of liquidity, economic risk-bearing capacity, and regulatory capital ratios. They also help to identify and quantify specific risks and potential risk concentrations in the DZ BANK Group or in individual portfolios and to assess risk factors, vulnerabilities, and threats.

The stress tests include scenarios for the purposes of liquidity management, capital planning, and internal capital and risk management. Stress tests are also carried out as part of bank recovery and resolution planning. Furthermore, the DZ BANK Group takes part in supervisory stress tests organized by the EBA and ECB. The outcome of the stress tests provides guidance for the management of risk, business planning, and decisions on liquidity measures or corporate action.

With the help of exploratory scenario analyses, the stress tests examine the impact of physical and transition climate-related risks on the main types of risk affected, taking the channels of impact into account, in order to gauge the resilience of the risk strategy to adverse developments.

#### 4.8 Limitation principles

The DZ BANK Group has implemented a system of limits to ensure that it retains an adequate level of liquidity and maintains its risk-bearing capacity. A system of limits and pre-set threshold values aims to ensure that the **liquidity surplus** at the level of the DZ BANK Group does not become a shortfall and that an adequate level of liquidity is guaranteed.

In the case of **risks backed by capital**, the limits take the form of risk limits or volume limits, depending on the type of business and type of risk. Whereas risk limits in all types of risk restrict the risk capital requirement measured with an economic model, volume limits are applied additionally in lending and trading transactions to limit credit risk. Risk management is also supported by the setting of limits for relevant key performance indicators.

#### 4.9 Hedging objectives and hedging transactions

**Hedging activities** can be undertaken where appropriate in order to transfer credit risk, market risk (Bank sector), market risk (Insurance sector), actuarial risk, and operational risk to the greatest possible extent to third parties outside the DZ BANK Group. All hedging activities are conducted within the strategic rules specified in writing and applicable throughout the group. Derivatives and other instruments are used to hedge credit risk and market risk.

If the hedging of risk in connection with financial instruments gives rise to **accounting mismatches** between the hedged item and the derivative hedging instrument used, the DZ BANK Group designates the hedging transaction as a hedge in accordance with the hedge accounting requirements of IFRS 9 in order to eliminate or reduce such mismatches. The DZ BANK Group continues to account for portfolio hedges in application of the rules under IAS 39. Hedge accounting in the DZ BANK Group encompasses the hedging of interest-rate risk. It therefore affects market risk in both the Bank and Insurance sectors. Hedging information is disclosed in note 83 of the notes to the consolidated financial statements.

DZ BANK uses derivatives to hedge **interest-rate risk**. It uses micro hedges between securities in the liquidity reserve and derivatives used for hedging in order to account for economic hedging in accordance with the provisions of section 254 HGB. Internal hedging instruments are included by means of the deputization principle.

#### 4.10 Recovery and resolution planning

In the reporting year, DZ BANK updated its **group recovery plan** for the DZ BANK Group in accordance with the requirements specified by banking supervisors and submitted it to the ECB. The recovery plan is based on the requirements specified in the German Bank Recovery and Resolution Act (SAG) and in other legal sources, especially Commission Delegated Regulation (EU) 2016/1075, various EBA guidelines, and the German Regulation on Minimum Requirements for the Design of Recovery Plans (MaSanV). The recovery plan is closely linked to the risk appetite statement of the DZ BANK Group as it uses the same KPIs. In addition, R+V prepares a hypothetical recovery plan in accordance with section 26 (1) sentence 4 VAG in conjunction with section 275 (1) VAG. **R+V's recovery plan** was voluntarily updated in 2024.

In accordance with article 7 (2) of Regulation (EU) No. 806/2014, the Single Resolution Board (SRB) is the European regulator responsible under the **Single Resolution Mechanism (SRM)** for the preparation of resolution plans and for all decisions in connection with the resolution of all institutions that are under the direct supervision of the ECB. A group resolution plan is drawn up for institutions that are subject to supervision at consolidated level. The SRB works closely with the national resolution authorities (this is BaFin in Germany).

The **resolution plan** is aimed at ensuring the resolvability of the banking group. In accordance with section 42 (1) SAG, the resolution authority (BaFin) can demand that the institution provide it with comprehensive assistance in connection with drawing up and updating the resolution plan. For this reason, DZ BANK supported the ongoing preparation of the resolution plan for the DZ BANK Group in 2024. It supplied the resolution authority with numerous analyses related to DZ BANK and completed standardized questionnaires.

## 5 General risk factors

The entities in the DZ BANK Group are exposed to a range of risk factors that affect multiple risk types. These general risk factors are presented below.

### 5.1 Regulatory risk factors

DZ BANK and its subsidiaries are exposed to changes in the regulatory environment. This applies especially to regulation of the financial services sector, which is subject to rapid change. The term '**regulation**' refers to all aspects of intervention in the financial services industry involving the imposition of rules. Regulation typically involves standards related to supervisory law, commercial law, capital markets law, company law, or tax law. Changes in the regulatory environment could have a negative impact on the business activities of DZ BANK and its subsidiaries.

In 2023, it had not been possible to fully predict the effects of the regulatory measures relating to the sectoral systemic risk buffer and the countercyclical capital buffer on the capital ratios of the DZ BANK banking group and DZ BANK. Based on BaFin's related general administrative acts that have since come into force, these risk factors are no longer relevant. There are currently no material regulatory risk factors.

### 5.2 Macroeconomic risk factors

There are a number of macroeconomic risk factors of relevance to the DZ BANK Group and DZ BANK that, if they materialized, could have an adverse impact on financial position and financial performance. These risk factors are explained below.

Fig. VI.8 provides an overview of the types of risk potentially affected by negative macroeconomic conditions.

#### 5.2.1 Escalation of geopolitical tensions and resulting trade friction

Some regions of the world are experiencing conflict that extends beyond their borders and is resulting in tensions between superpowers. It is impossible to rule out adverse financial effects on the real economy in the European Union (EU) including Germany.

The political implications of the conflict in the **Middle East** are much more far-reaching than previous disputes in the region, and the conflict has spread. The situation could deteriorate further over the course of US President Donald Trump's term in office as he is seen as a supporter of Israel's Prime Minister Benjamin Netanyahu. The biggest military, and economic, risk continues to lie in Iran entering the war, which would pit the region's two largest armies against each other. This would have serious consequences for the global economy. Major bottlenecks would be expected in the supply of crude oil and liquefied petroleum gas, which could send global market prices soaring and push up inflation again.

FIG. VI.8 – MACROECONOMIC RISK FACTORS AT A GLANCE

| Macroeconomic Risk factors                                       | Year-on-year change              | Risk type affected and relevant chapter in the risk report |                                   |                     |                                      |

The economic impact of the **war in Ukraine** continues to be felt globally. Russia's invasion of Ukraine triggered the biggest commodity price shock since 1973 and caused one of the most serious interruptions to wheat supply in a century. There is also a risk that Russia will step up its hybrid warfare against western countries. Hybrid warfare is a combination of conventional military operations, economic pressure, attacks on critical infrastructure, and propaganda in the media and on social networks. Attacks on critical infrastructure, in particular, can cause considerable economic damage. Other potential consequences of hybrid warfare in the affected economies would be a strain on public finances due to rising defense spending and a slowdown in economic growth due to increased uncertainty among economic players.

The dispute between **China and Taiwan**, in which Taiwan believes it is at constant risk of invasion, continues to simmer. The United States reiterated its security guarantees for Taiwan in response to a more aggressive stance from the Chinese government and a series of military maneuvers. As China does not recognize Taiwan's independence, this dispute is likely to continue fueling tensions between China and the United States. However, it is difficult to gauge China's willingness to escalate the dispute. There is also potential for conflict with other neighboring countries due to China's territorial claims in the South China Sea.

In addition, the protracted dispute on the **Korean peninsula** flares up repeatedly due to North Korea's nuclear weapons program and its many military provocations. Any escalation would directly affect the interests of the superpowers China and the United States and could widen into a conflict with global consequences.

The aforementioned geopolitical tensions can **adversely affect global trade**. In addition to the effects of disrupted supply chains, there is a risk of a renewed escalation of trade disputes between the United States, China, and the EU with a new US administration in place. Since entering office in January 2025, Trump has already imposed the first tariffs on Canada, Mexico, and China as well as on all imports of steel and aluminum. Tariffs will also be implemented for countries that impose their own tariffs on US imports. The new tariff

arrangements and the anticipated responses could have a negative impact on the global economy, and for the export-dependent German economy in particular. For companies in Germany, the restrictions on global trade could lead to higher import prices and a shortage of input products on the one hand and, on the other, to a decline in exports.

### 5.2.2 Global economic downturn

The future trajectory of the global economy continues to depend to a large extent on the United States and the People's Republic of China. The macroeconomic outlook for these two countries is illustrated in chapter IV.1.1 and chapter IV.1.2 of the (group) management report respectively.

The comparatively high level of stability of the **US economy** is attributable to exceptionally vast government support programs. The annual US budget deficit is currently running at between 7 and 8 percent of GDP. The country's significant public debt, standing at over 120 percent of GDP, will likely persist as the re-election of Trump could lead to more tax cuts and thus push up debt even further. If debt levels remain high in the United States, the interest burden could grow and thus dent consumer demand in the long term. This trend would be intensified by the inflationary impact of new tariffs and a more restrictive migration policy, exacerbating the country's labor shortage and, in the long term, damaging market confidence. In the near term, the US economy is likely to benefit from Trump's pro-business policies. However, if Trump does not change direction – in light of the response in the financial markets – this would, in turn, see capital spending fall, dampen economic activity, and ultimately bring about a recession in the United States.

A weakening of the US economy would have far-reaching adverse consequences for the world economy as the United States plays a key role in global trade and is an important sales market for many countries. If US demand falls and economic uncertainty rises, other countries could also be impacted by lower exports and economic headwinds, potentially triggering a global recession.

Although the **Chinese economy** achieved solid growth of 5.0 percent in 2024, there has been a deep loss of confidence among China's population, which has increased its propensity to save and dampened consumer sentiment. This is reflected in the real estate market and in consumer prices, which have increased only slightly following a period of deflation. Poor domestic demand in China is having an adverse effect on its demand for imports, such as input goods and capital goods from Germany, and this situation is expected to be further compounded by weaker Chinese exports to the United States as a result of the reciprocal tariffs. Although Beijing is supporting the economy with fiscal and monetary policy measures aimed at mitigating the economic slowdown, any recovery will likely be only temporary.

### 5.2.3 Economic policy divergence in the eurozone

Chapter IV.1.3 of the (group) management report describes the anticipated economic situation in the eurozone. The ongoing **fiscal problems** in Spain, Italy, France, and Portugal have produced high levels of debt and mounting interest burdens. This is weighing on these countries' budgets and limiting the financial headroom for capital investment and public spending.

**Italy's** high level of government debt remains its number one challenge and is highly likely to rise further over the next 3 years. The EU has announced excessive deficit procedures against Italy and other member states, the outcome of which remains uncertain. Despite countermeasures and positive growth forecasts for GDP, Italy's funding requirements will probably remain very high. Given that Italy's government debt remains high with large holdings of domestic government bonds and its credit quality still in need of improvement, Italian banks will have to continue to accept an appropriate risk premium if they want to obtain funding in the capital markets. A reduction in the ECB's bond purchases or the absence of progress with bringing down government debt could make it much more difficult for Italy and banks located there to access the capital markets.

**France** has not managed to substantially reduce its deficit for many years. Its high level of government debt and budget deficit are increasingly becoming a political and financial problem. The leading French index is recording losses, and risk premiums on French government bonds are reaching record highs. Despite a budget for 2025

having been recently adopted, the political situation remains unstable due to the forthcoming negotiations concerning the controversial pension reforms. Given the weak outlook in the country's own fiscal forecasts, it is also unclear what the next steps in a potential excessive deficit procedure would be. France's economy is the second-largest in the eurozone and very diversified. Its credit ratings remain good, but there is a risk that they will be downgraded if the pension reforms are reversed and government debt goes up as a result.

The increasing influence of certain political movements in a number of European states could lead to national governments putting their own interests first and being less prepared to seek common European solutions. This could lead to **protectionist economic policies**, with individual countries attempting to solve their economic challenges alone and passing costs onto other EU countries instead of working together. This could further reinforce existing economic divergence in the eurozone.

In the last few years, the **expansionary monetary policy of the ECB**, and particularly its buying programs in various bond segments, largely prevented the structural problems in some European Monetary Union (EMU) member countries from being reflected in the capital markets. With the expiry of the pandemic emergency purchase program, this may change as a result of the potential renewed tightening of monetary policy. The ECB has developed the transmission protection instrument so that it can intervene in the markets in order to counteract any excessive rise in risk premiums. However, if it is unable to do so, the risk premiums of more highly indebted member states could increase sharply, which would make it considerably more difficult for these countries to obtain funding through the capital markets.

#### 5.2.4 Ongoing weakness in the German economy

The **phase of weakness in the German economy** – with growth at around zero – could well continue for the time being, especially given the likely dampening effect of the announced US import tariffs for Germany and its huge export industry. There is also a risk that the months of political standstill during the recent federal election campaign and the subsequent process of forming a government will delay the extensive structural reforms and investment in the future that Germany urgently needs in order to restore its competitiveness and secure its prosperity.

There is also a risk that **structural problems**, such as labor shortages and persistently high energy prices, could cause inflation to rise again, and that the resulting inflation may not just be a temporary phenomenon but could remain firmly above the ECB's inflation target for an extended period. This would be particularly problematic if the higher prices, combined with the reduction in manufacturing output, made consumers reluctant to spend and wages simultaneously rose as this would result in a wage/price spiral. This could ultimately lead to a protracted period of stagflation, i.e. a combination of elevated inflation, stagnant output and demand, and rising unemployment.

#### 5.2.5 Correction in real estate markets

The macroeconomic challenges presented by the anticipated situation in the real estate markets are described in chapter IV.1.5 of the (group) management report. Further corrections in conjunction with the difficult wider economic conditions could limit investment appetite. The additional and persistently high level of borrowing costs could therefore see the crisis in the real estate sector flare up again. This scenario poses a macroeconomic risk factor for the DZ BANK Group.

## 5.2.6 Unpredictable interest-rate market

### Scenarios involving interest-rate cuts

Following interest-rate cuts by the Federal Reserve Board (Fed) and the ECB in 2024, market interest rates are down from the peaks they reached in 2023. However, interest rates continue to have an effect on the rate of inflation, which was only slightly higher than the ECB's target rate of 2 percent during 2024 due to the weak state of the economy and base effects in energy prices. The markets expects the ECB, in particular, to remain on its expansionary course and reduce interest rates further. If interest rates are cut too quickly, there is a risk that inflationary effects, such as a wage/price spiral, may push inflation back up.

### Scenarios involving interest-rate hikes

The re-election of Donald Trump and a Republican majority in Congress have led to reassessments of economic prospects and the outlook for interest rates in the United States. The implementation of numerous measures by the future administration of the United States could lead to the economy overheating and inflation picking up again. In this scenario, unexpected interest-rate hikes by the Fed cannot be ruled out. In the event of an interest-rate rise in the United States, it is likely that interest rates would also climb in the eurozone, which would call the sustainability of government debt levels of some European countries into question too. Unexpectedly strong economic growth in Europe could also lead to higher interest rates in the eurozone.

## 5.2.7 Heightened volatility in the global financial markets

The stock market indices in Europe and the United States reached new heights in 2024 and the price/earnings ratios of listed companies were close to their cyclical peaks. At the same time, investor jitters increased, as was seen when implied volatility soared at the end of July 2024, for example. There is a systemic risk that the existing speculative interdependence of some asset classes or regions will give rise to large price falls in the stock markets around the world, which could diminish the value of market participants' assets and endanger financial stability. This would, in turn, have a negative impact on the global economy.

## 5.3 Sustainability risk factors

The DZ BANK Group and DZ BANK are exposed to a number of sustainability risk factors that, if they materialized, could have an adverse impact on financial position and financial performance. These risk factors are explained below.

Fig. VI.9 shows the sustainability risk factors of relevance to the different risk types and indicates the chapters containing more information.

FIG. VI.9 – SUSTAINABILITY RISK FACTORS OF RELEVANCE TO THE RISK TYPES IN THE BANK SECTOR AND INSURANCE SECTOR

| Sustainability risk factors | Risk type affected and relevant chapter in the risk report |                   |                                |                   |
|-----------------------------|------------------------------------------------------------|-------------------|--------------------------------|-------------------|
|                             | Bank sector                                                |                   | Insurance sector               |                   |
| Physical climate risks      | Credit risk                                                | Chapter VI.8.3.2  | Life and health actuarial risk | Chapter VI.16.2.2 |
|                             |                                                            |                   | Non-life actuarial risk        | Chapter VI.16.2.2 |
| Transition risks            | Credit risk                                                | Chapter VI.8.3.2  | Market risk                    | Chapter VI.17.2.2 |
|                             | Business risk                                              | Chapter VI.12.3.2 |                                |                   |
|                             | Reputational risk                                          | Chapter VI.13.3   | Reputational risk              | Chapter VI.19.2   |
|                             | Operational risk                                           | Chapter VI.14.5   | Operational risk               | Chapter VI.20.3   |
| Social risks                | Reputational risk                                          | Chapter VI.13.3   | Reputational risk              | Chapter VI.19.2   |
| Corporate governance risks  | Reputational risk                                          | Chapter VI.13.3   | Reputational risk              | Chapter VI.19.2   |
|                             | Operational risk                                           | Chapter VI.14.5   | Operational risk               | Chapter VI.20.3   |

### 5.3.1 Physical climate risks

Physical risk refers to the financial impact of climate change or the financial impact of environmental conditions. These impacts include more frequent occurrence of extreme weather events, gradual climate change, and progressive environmental degradation. A physical risk is considered acute if it arises as a result of extreme events, such as earthquakes, droughts, floods, or storms. If it is the result of gradual changes (e.g. due to rising temperatures, rising sea levels, loss of biodiversity), the risk is classified as chronic. The impacts can occur directly (such as damage to property or a reduction in productivity) or can have indirect consequences, such as supply chain disruptions.

### 5.3.2 Transition risks

Transition risk is the danger of financial losses that may directly or indirectly occur for banks or insurance companies, for example, in connection with the process of switching to a lower-carbon and more environmentally sustainable economy. This risk could, for example, arise due to the rapid adoption of political initiatives to protect the climate and the environment, due to technological progress, or due to changes in market sentiment and preferences. DZ BANK makes a distinction between transition risk related to the climate and transition risk related to nature-related risk, with the latter mainly referring to the processes of adaptation in connection with the transition to a more environmentally sustainable economy.

### 5.3.3 Social risks and corporate governance risks

**Social risks** arise as a result of inadequate standards for upholding basic rights and protecting against discrimination, or as a result of unfair, opaque, or improper customer practices. Social risks can lead to the loss of employees who are particularly crucial to the success of the business. They can also lead to financial claims or liabilities caused by inappropriate practices. The social risks are reflected in reputational risk, in particular, where the negative effect on reputation can result in a change in customer behavior and demand along with financial losses for the entities in the DZ BANK Group.

**Corporate governance risks** can arise from insufficient or opaque corporate governance practices or from a lack of or inadequate codes of conduct. This includes a lack of established corporate policy on combating money laundering, bribery, and corruption. Inadequate management of critical supply chains can also increase corporate governance risks. The occurrence of corporate governance risks leads, in particular, to increased reputational risk due to a loss of confidence among customers and investors. This can result in lost income, higher funding costs, or penalties. It can also permanently impair the ability to carry out transactions.

## 5.4 Rating downgrades for DZ BANK

For the entities in the DZ BANK Group, their own credit rating is an important element in any comparison with competitor banks. A downgrade or even just the possibility of a downgrade in the rating for a management unit could have a detrimental effect in all entities in the DZ BANK Group on the relationship with customers and on the sale of products and services.

If DZ BANK's credit rating or the network rating for the Cooperative Financial Network were to be downgraded, this would have a negative impact on DZ BANK's **costs of raising equity and borrowing**. In the event of a rating downgrade, new **liabilities** could also arise, or liabilities dependent on the maintenance of a specific credit rating could become due for immediate payment.

Furthermore, if a rating downgrade were to occur, the management units could face a situation in which they had to furnish additional **collateral** in connection with rating-linked collateral agreements for derivatives (regulated by a credit support annex to an appropriate master agreement for financial futures) or in which they were no longer considered suitable **counterparties for derivative transactions** at all.

If the credit rating for a management unit were to fall out of the range covered by the top four rating categories (investment-grade ratings, disregarding rating subcategories), the operating businesses of all the entities in the DZ BANK Group could be adversely affected. This could also lead to an increase in the **liquidity requirement in**

**relation to derivatives** and to a rise in **funding costs**. The effects of downgrades of long-term ratings are discussed in the chapter covering the measurement of liquidity risk (see chapter VI.6.2.5).

The rating agencies S&P Global Ratings, Moody's Ratings, and Fitch Ratings confirmed **DZ BANK's ratings** in 2024. The outlooks for the ratings also remained stable.

## 6 Liquidity adequacy

### 6.1 Strategy

The management of liquidity adequacy is an integral component of business management in the DZ BANK Group and the management units. Liquidity adequacy is defined as the holding of sufficient liquidity reserves in relation to the risks arising from future payment obligations. It is considered from both an economic and a normative perspective. Whereas the economic perspective (focusing on the DZ BANK Group) takes into account the requirements of the ECB Guide to the ILAAP and MaRisk BA, the normative perspective (focusing on the DZ BANK banking group) – while also taking account of the ECB Guide to the ILAAP – additionally applies the requirements from the CRR and the German national requirements for the implementation of the Capital Requirements Directive (CRD) in KWG.

Economic liquidity adequacy is managed on the basis of the internal liquidity risk model, which takes account of the impact on liquidity of other risks when measuring liquidity risk. Liquidity risk is significantly influenced by the risks that are backed by capital and those that are not backed by capital. In particular, reputational risk is relevant to liquidity risk. The DZ BANK Group fulfills the normative liquidity adequacy requirements by managing economic liquidity adequacy while still monitoring internal risk appetite in respect of the regulatory liquidity ratios.

The activities of DZ BANK and the management units that are deemed material in terms of liquidity risk in the risk inventory – BSH, DZ HYP, DZ PRIVATBANK, TeamBank, and VR Smart Finanz – are relevant to the **economic liquidity adequacy** of the DZ BANK Group. DZ BANK is considered to be an isolated management unit from the economic perspective. Due to regulatory requirements, DZ BANK along with all entities consolidated for regulatory purposes with regard to normative liquidity risk are included in the calculation of the **normative liquidity adequacy** of the DZ BANK banking group. Due to the liquidity waiver, another management-level focus in both economic and regulatory management is the **liquidity subgroup** comprising DZ BANK and DZ HYP.

### 6.2 Liquidity adequacy in the economic perspective

Owing to the close ties between management of economic liquidity adequacy at DZ BANK and that of the DZ BANK Group, the information below on economic liquidity adequacy also applies to DZ BANK. Liquidity risk is a key aspect of economic liquidity adequacy. Liquidity risk at DZ BANK to a large degree determines liquidity risk in the DZ BANK Group.

#### 6.2.1 Definition

Liquidity risk is the risk that cash and cash equivalents will not be available in sufficient amounts to ensure that payment obligations can be met. It is therefore defined as insolvency risk.

#### 6.2.2 Business background and risk strategy

Specifying and monitoring risk appetite for liquidity risk are key aspects of the liquidity risk strategy, which aims to establish a binding basis for implementing these specifications at operational level.

The operations of the DZ BANK Group as a whole and of the management units are governed by the principle that liquidity risk must only be assumed if it is in compliance with the **risk appetite** specified by the Board of Managing Directors. Solvency must be ensured, even in times of serious crisis lasting more than 1 year. Long-term liquidity of more than 1 year, also referred to as structural liquidity, is intended to ensure ongoing

compliance with this management target in a normal market and business environment at the level of the DZ BANK Group, DZ BANK, and DZ HYP. Risk appetite is expressed by the key figures and internal threshold values in the risk appetite statement and by the stress scenarios defined for risk measurement in the economic perspective within the ILAAP. The stress scenarios also take into account the specific MaRisk BA requirements for the structure of stress scenarios at capital-market-oriented banks.

However, further **extreme scenarios** are not covered by the risk appetite. The risks arising in this regard are accepted and therefore not taken into account in the management of risk. Examples of such scenarios are a run on the bank, i.e. an extensive withdrawal of customer deposits as a result of damage to the reputation of the banking system, or a situation in which all non-collateralized funding sources on money markets completely dry up over the long term, also encompassing transactions with those corporate customers, institutional customers, and customer banks that have close ties to the entities in the DZ BANK Group. On the other hand, the risk of a short-term and complete loss, or the risk of a medium-term and substantial loss, of unsecured funding from institutional investors is not accepted and this risk is the subject of relevant stress scenarios.

**Liquidity reserves** in the form of liquid securities are held by the entities so that they can remain solvent, even in the event of a crisis. Potential sources of funding in the secured and unsecured money markets are safeguarded by maintaining a broadly diversified national and international customer base. The local cooperative banks also provide a significant source of funding.

DZ BANK aims to ensure that the liquidity risk strategy is consistent with the **business strategies**. To this end, the liquidity risk strategy is reviewed at least once a year with due regard to the business strategies and adjusted as necessary.

#### 6.2.3 Risk factors

The following factors, alone or in combination with each other, could lead to an increase in liquidity risk, adversely affect financial position and, in an extreme case, cause the insolvency of DZ BANK:

- Funding is withdrawn but cash nevertheless still flows out when legally due (**follow-up funding risk**).
- Derivatives result in greater collateral requirements that involve cash outflows (**collateral risk**).
- Changes in the fair value of financial instruments mean that less liquidity can be generated (**fair value risk**).
- Cash is paid out earlier than expected because drawing rights are exercised (**drawdown risk**).
- Cash outflows are earlier than expected or cash inflows later than expected because termination rights are exercised (**termination risk**).
- New business is entered into on a significant scale, resulting in cash outflows (**new business risk**).
- Products are repurchased on a significant scale, resulting in cash outflows (**repurchase risk**).
- The liquidity requirement to ensure intraday payment obligations can be satisfied is greater than expected (**intraday risk**).
- There has been a negative impact on opportunities for funding in foreign currencies, for example the generation of currency-related liquidity through currency swaps (**foreign currency funding risk**).

These and other events are incorporated into the calculation of liquidity risk as **stress scenarios** (see chapter VI.6.2.5).

#### 6.2.4 Organization and responsibility

The strategic guidelines for the management of liquidity risk by the entities in the DZ BANK Group are established by the **Group Risk and Finance Committee**. At the level of DZ BANK, this is the responsibility of the **Asset/Liability Committee**.

**Liquidity risk control** in the DZ BANK Group is coordinated by the Group Risk Control working group and carried out in Risk Controlling at DZ BANK independently of the units that are responsible for liquidity risk management. The risk data calculated by the subsidiaries on the basis of intragroup guidelines is aggregated to provide a group perspective.

## 6.2.5 Risk management

### Measurement of liquidity risk

DZ BANK uses an **internal risk model** to determine liquidity risk for the DZ BANK Group and DZ BANK over a short-term time horizon of 1 year and a long-term time horizon of 10 years.

Using this model, four stress scenarios and one risk scenario are simulated on a daily basis for the short-term time horizon of 1 year. For the long-term time horizon of 10 years, a baseline scenario is simulated on a monthly basis. In addition to DZ BANK, all other entities in the DZ BANK Group that are material in terms of liquidity risk are integrated into the groupwide measurement of this risk.

A **minimum liquidity surplus** figure is calculated for the risk scenario and the four stress scenarios. This figure quantifies the minimum surplus cash that would be available if the scenario were to materialize suddenly within the time horizon of 1 year. To carry out this calculation, cumulative cash flow (forward cash exposure) is compared against available liquidity reserves (counterbalancing capacity) on a day-by-day basis. The minimum liquidity surplus expresses economic liquidity adequacy. **Forward cash exposure** includes both expected and unexpected payments.

The **counterbalancing capacity** includes balances on nostro accounts, liquid securities, and unsecured funding capacity with customers, banks, and institutional investors. By including the counterbalancing capacity, the calculation of the minimum liquidity surplus already takes into account the effect on liquidity of the measures that could be implemented to generate liquidity in each scenario. These measures include collateralized funding of securities in the repo market.

For a baseline scenario, the **structural minimum liquidity surplus** is calculated by quantifying the surplus cash in the maturity bands 2 to 5 years and 6 to 10 years. This calculation is also carried out by comparing the forward cash exposure and the counterbalancing capacity.

DZ BANK's internal liquidity risk model is validated using an **appropriateness test** independently of the organizational unit responsible for developing the model. Furthermore, the model is adjusted in line with changes in the market, products, and processes. Validation is carried out for each entity in the DZ BANK Group and aggregated at group level.

### Liquidity risk stress tests

Stress tests are conducted for the forward cash exposure and for the counterbalancing capacity using the following four scenarios with defined limits: downgrading, corporate crisis, market crisis, and combination crisis. The stress scenarios are defined as follows:

- **Downgrading:** Long-term ratings awarded by S&P Global Ratings, Moody's Ratings, and Fitch Ratings to one or more entities in the DZ BANK Group downgraded by one notch. The downgrade is triggered by a deterioration in profitability or in the earnings forecast or by a preceding loss of confidence among customers and banks.
- **Corporate crisis:** Serious entity-specific crisis, for example caused by reputational damage. The main consequences of this scenario could be a considerable negative impact on customer behavior and the downgrading by three notches of the long-term ratings awarded by all of the aforementioned rating agencies.
- **Market crisis:** Turmoil in global money and capital markets. The primary feature of this scenario is a sudden, sharp fall in the value of assets traded in these markets. The scenario assumes, for example, a loss of confidence among money market players, which could lead to a liquidity squeeze.

- **Combination crisis:** Analysis of a combination of bank-specific and market-related factors. However, it does not constitute a mere aggregation of the two stress scenarios arising from a market crisis and a corporate crisis. Instead, the interaction between the two scenarios is taken into account. The combination crisis assumes that the financial sector would be particularly badly affected. The underlying scenario is also based on a deterioration in the reputation of the entities in the DZ BANK Group. It assumes there would only be very limited access to unsecured funding from customers, banks, and institutional investors over the forecast period of 1 year.

The stress scenario with the lowest minimum liquidity surplus is deemed to be the **squeeze scenario**. Economic liquidity adequacy for the time horizon up to 1 year is determined as the amount of the minimum liquidity surplus in the squeeze scenario.

Further stress scenarios in addition to the scenarios with defined limits are analyzed, and a **reverse stress test** is carried out and reported on a monthly basis. The reverse stress test shows which stress events (changes in risk factors) could still occur without liquidity falling below the limit in a subsequent liquidity risk measurement and triggering the need for a business model adjustment. In addition, **adverse stress tests** are carried out to provide a forward-looking assessment of liquidity risk. They involve analyzing whether the DZ BANK Group would be able to ensure an adequate level of liquidity even in the event of exceptional, but plausible, developments over a medium-term horizon. The adverse stress test scenarios underlying this forecast are also used in ICAAP stress testing.

For the purposes of DZ BANK's internal funding plan, which is closely linked to the business planning of the DZ BANK Group and is prepared at least once a year and reviewed monthly by retrospectively comparing the planned and actual volumes of business generated, the trend is forecast for the minimum liquidity surplus and structural minimum liquidity surplus KPIs in the time horizon of the next 3 calendar years. These forecasts are intended to ensure that DZ BANK's internal funding plan guarantees an adequate level of liquidity over the plan's time horizon.

#### Management of limits for liquidity risk

Liquidity risk is monitored and managed with the aim of ensuring economic and normative liquidity adequacy at every measurement date. This is based on the minimum liquidity surplus and the structural minimum liquidity surplus. An internal limit system aims to ensure that the DZ BANK Group remains solvent even in serious stress scenarios.

The **minimum liquidity surplus** at the level of the DZ BANK Group, for DZ BANK, and for the liquidity subgroup comprising DZ BANK and DZ HYP is restricted through the use of limits in line with external minimum targets laid down by the supervisory authorities. The limit system of the DZ BANK Group (which is the focus of liquidity risk management) that was established for the minimum liquidity surplus is complemented by the internal minimum threshold and the internal observation threshold, which are both higher than the limit. For DZ BANK and the liquidity subgroup, the management of limits is restricted to limits and internal observation thresholds.

The internal minimum threshold and the internal observation threshold are intended to ensure that corrective action can be initiated in good time before the limit is reached. Limits have also been set for the minimum liquidity surplus of each of the subsidiaries included in liquidity risk management. The internal minimum threshold, limit, and internal observation threshold relate to the stress scenario with the lowest minimum liquidity surplus (squeeze scenario).

The new **structural minimum liquidity surplus** introduced in 2024 is managed at the level of the DZ BANK Group and for DZ BANK using limits that have been established for the maturity bands 2 to 5 years and 6 to 10 years.

The limits and the internal observation thresholds are set by the **Board of Managing Directors**. The liquidity risk control function at DZ BANK **monitors** compliance with the limits and internal observation thresholds for the minimum liquidity surplus both at group level and for DZ BANK, the liquidity subgroup, and the subsidiaries. The limits and internal observation thresholds relating to the structural minimum liquidity surplus are monitored at group level and for DZ BANK.

For the DZ BANK Group as a whole and for each management unit, **emergency liquidity plans** that build on the limit system are in place so that the group is able to respond to crisis events rapidly and in a coordinated manner. The emergency plans are revised annually by the liquidity risk control function at DZ BANK and other management units.

#### Liquidity risk mitigation

Within liquidity management activities, measures to reduce liquidity risk are initiated by the treasury units of the subsidiaries. Active liquidity risk management is made possible by holding instruments in the form of cash and liquid securities, and by managing the maturity profile of money market and capital market transactions.

#### Liquidity transfer pricing system

The DZ BANK Group aims to use liquidity – which is both a resource and a success factor – in line with risks. Liquidity costs, benefits, and risks are allocated within the DZ BANK Group based on the liquidity transfer pricing system using internal prices charged by the units generating liquidity and paid by those consuming liquidity. Care is taken to ensure that the transfer prices are consistent with risk measurement and risk management.

Transfer prices are set for all significant products. The transfer pricing system takes into account the holding period and market liquidity of the products and has an impact on risk/return management.

### 6.2.6 Quantitative variables in liquidity risk

#### Liquid securities

The available liquid securities have a material influence on the minimum liquidity surplus and the structural minimum liquidity surplus. Liquid securities are a component of the **counterbalancing capacity** and are largely held in the portfolios managed by DZ BANK's Group Treasury and Capital Markets Trading divisions or in the portfolios of the treasury units at the subsidiaries of DZ BANK. Only bearer bonds are counted as liquid securities.

Liquid securities comprise highly liquid securities that are suitable for collateralizing funding in private markets, securities eligible as collateral for central bank loans, and other securities that can be liquidated in the 1-year forecast period that is relevant for liquidity risk.

Securities are only eligible as liquid securities if they are not pledged as collateral, e.g. for secured funding. Securities that have been borrowed or taken as collateral for derivatives business or in connection with secured funding only become eligible when they are freely transferable. Eligibility is recognized on a daily basis and also takes into account factors such as restrictions on the period in which the securities are freely available.

Liquid securities represent the largest proportion of the counterbalancing capacity and make a major contribution to maintaining solvency in the stress scenarios with defined limits at all times during the relevant forecast period. In the first month, which is a particularly critical period in a crisis, liquid securities are almost exclusively responsible for maintaining solvency in the stress scenarios with defined limits.

Fig. VI.10 shows the liquidity value of the liquid securities that would result from secured funding or if the securities were sold.

As at December 31, 2024, the total liquidity value at the level of the **DZ BANK Group** was €57.7 billion (December 31, 2023: €37.3 billion). The total liquidity value attributable to **DZ BANK** as at December 31, 2024 was €45.3 billion (December 31, 2023: €26.9 billion). The rise in liquid securities that are eligible for GC Pooling

and as collateral for central bank loans mainly resulted from the gradual growth of securities portfolios and from a higher number of reverse repos with customers, banks in the Cooperative Financial Network, and subsidiaries of DZ BANK.

FIG. VI.10 – LIQUID SECURITIES

| € billion                                                                 | DZ BANK Group |               | DZ BANK       |               |

<sup>1</sup> GC = general collateral, ECB Basket = eligible collateral for ECB funding.

#### Unsecured short- and medium-term funding

The main factors determining the minimum liquidity surplus and the structural minimum liquidity surplus besides the liquid securities are the availability and composition of the sources of funding.

The DZ BANK Group has a diversified funding base for operational liquidity. A considerable portion is accounted for by money market activities resulting from the cash-pooling function with the **local cooperative banks**. Under these arrangements, the cooperative banks can invest excess liquidity with DZ BANK at any time. Conversely, if the cooperative banks need liquidity, they can obtain it from DZ BANK within the approved limits. Overall, this regularly results in a liquidity surplus in the DZ BANK Group and at DZ BANK, which provides one of the main bases for short-term funding in the unsecured money markets.

**Corporate customers** and **institutional customers** are another important source of funding for covering operational liquidity requirements in the DZ BANK Group. In the context of liquidity risk, corporate customers are those customers that are not banks and are not classified as institutional customers.

For funding purposes, the management units also issue **money market products based on debt certificates** under a standardized groupwide multi-issuer euro commercial paper program through the offices and branches in Frankfurt am Main, New York, Hong Kong, London, and Luxembourg. DZ BANK also runs a US-dollar-denominated commercial paper program for Frankfurt am Main. Key repo and securities lending activities, together with the collateral management process, are managed centrally in DZ BANK's Group Treasury division.

Funding on the **interbank market** is not strategically important, either to the DZ BANK Group or to DZ BANK. The range of funding sources in the unsecured money markets is shown in Fig. VI.11.

FIG. VI.11 – UNSECURED SHORT-TERM AND MEDIUM-TERM FUNDING

| € billion                                       | DZ BANK Group |               | DZ BANK       |               |
|-------------------------------------------------|---------------|---------------|---------------|---------------|
|                                                 | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024 | Dec. 31, 2023 |
| <b>Deposits</b>                                 | <b>100.6</b>  | <b>99.7</b>   | <b>89.7</b>   | <b>85.3</b>   |
| Deposits of local cooperative banks             | 64.8          | 59.7          | 64.2          | 59.1          |
| Current account deposits of other customers     | 35.8          | 40.0          | 25.5          | 26.1          |
| <b>Money market borrowing</b>                   | <b>73.9</b>   | <b>59.8</b>   | <b>68.0</b>   | <b>57.9</b>   |
| Central banks, interbank, and customer banks    | 10.7          | 7.8           | 9.6           | 7.8           |
| Corporate customers and institutional customers | 41.6          | 36.2          | 39.2          | 36.0          |
| Certificates of deposit/commercial paper        | 21.6          | 15.8          | 19.1          | 14.1          |

The changes in the composition of the sources of funding compared with December 31, 2023 arose because customers and investors were focused on diversification due to the interest-rate situation. The changes included term extensions as a result of reallocations from current account deposits to fixed-term deposits, which were made on the basis of assumptions about anticipated interest-rate cuts by the ECB.

Further information on liquidity management and funding can be found in chapter II.5 of the (group) management report.

The **maturity analysis of contractual cash inflows and cash outflows** is set out in note 86 of the notes to the consolidated financial statements. However, the cash flows in these disclosures are not the same as the expected and unexpected cash flows used for internal liquidity risk management.

### 6.2.7 Risk position

#### Minimum liquidity surplus

Short-term economic liquidity adequacy is assured if none of the four stress scenarios with defined limits exhibit a negative value for the key risk indicator 'minimum liquidity surplus'. Fig. VI.12 shows the results of measuring liquidity risk. The results are based on a daily calculation and comparison of forward cash exposure and counterbalancing capacity. The values reported are the values that occur on the day on which the liquidity surplus calculated over the forecast period of 1 year is at its lowest point.

FIG. VI.12 – LIQUIDITY UP TO 1 YEAR IN THE STRESS SCENARIOS WITH DEFINED LIMITS:  
MINIMUM LIQUIDITY SURPLUSES FOR THE DZ BANK GROUP

| € billion          | Forward cash exposure |               | Counterbalancing capacity |               | Minimum liquidity surplus <sup>1</sup> |               |
|--------------------|-----------------------|---------------|---------------------------|---------------|----------------------------------------|---------------|
|                    | Dec. 31, 2024         | Dec. 31, 2023 | Dec. 31, 2024             | Dec. 31, 2023 | Dec. 31, 2024                          | Dec. 31, 2023 |
| Downgrading        | 7.6                   | -43.6         | 42.5                      | 90.6          | 50.1                                   | 46.9          |
| Corporate crisis   | -60.3                 | -45.6         | 83.0                      | 64.1          | 22.7                                   | 18.5          |
| Market crisis      | -67.4                 | -47.9         | 101.0                     | 78.9          | 33.6                                   | 31.0          |
| Combination crisis | -66.7                 | -47.4         | 93.0                      | 72.1          | 26.3                                   | 24.7          |

<sup>1</sup> The values with an orange background are the minimum liquidity surplus in the squeeze scenario.

The liquidity risk value measured for the **DZ BANK Group** as at December 31, 2024 for the stress scenario with defined limits with the lowest minimum liquidity surplus (squeeze scenario) was €22.7 billion (December 31, 2023: €18.5 billion). The liquidity risk value attributable to **DZ BANK** as at December 31, 2024 was €11.8 billion (December 31, 2023: €4.8 billion). The liquidity risk value attributable to the **liquidity subgroup** as at December 31, 2024 was €13.3 billion (December 31, 2023: €6.8 billion).

The rise in the minimum liquidity surplus was largely due to the increase in current account deposits and overnight money from banks in the Cooperative Financial Network.

The minimum liquidity surplus as at December 31, 2024 for all management levels – the DZ BANK Group, DZ BANK, and the liquidity subgroup – was positive in the stress scenarios with defined limits. This is due to the fact that the counterbalancing capacity was above the cumulative cash outflows on each day of the defined forecast period in every scenario, which indicates that the cash outflows assumed to take place in a crisis could be comfortably covered.

The limit for the minimum liquidity surplus of the **DZ BANK Group** as at December 31, 2024 was €1.0 billion. The internal observation threshold stood at €5.0 billion as at the reporting date. The limits and internal observation thresholds in place for **DZ BANK** and for the **liquidity subgroup** as at December 31, 2024 were unchanged compared with December 31, 2023 at €1.9 billion.

As at the reporting date, the minimum liquidity surplus for the DZ BANK Group, DZ BANK, and the liquidity subgroup exceeded the **external minimum targets** laid down by the supervisory authorities, the **internal minimum thresholds**, and the **internal observation thresholds**. The target/threshold values are shown in Fig. VI.3 and Fig. VI.4. The **limits** were adhered to.

#### Structural minimum liquidity surplus

The structural economic liquidity adequacy in the baseline scenario is ensured if there is no negative value below the relevant limit in either of the two maturity bands, 2 to 5 years and 6 to 10 years. The results of measuring liquidity risk in Fig. VI.13 are obtained by comparing the forward cash exposure and the counterbalancing capacity in the relevant maturity bands. The amount of the minimum liquidity surplus is disclosed for each maturity band.

The limits for the structural minimum liquidity surplus were adhered to as at December 31, 2024, both at the level of the DZ BANK Group and at DZ BANK.

FIG. VI.13 – STRUCTURAL MINIMUM LIQUIDITY SURPLUS OF THE DZ BANK GROUP AND DZ BANK<sup>1</sup>

| € billion     | Period     | Limit         |               | Structural minimum liquidity surplus |               |
|---------------|------------|---------------|---------------|--------------------------------------|---------------|
|               |            | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024                        | Dec. 31, 2023 |
| DZ BANK Group | 2–5 years  | -4.0          |               | 50.6                                 |               |
|               | 6–10 years | -6.0          |               | 28.8                                 |               |
| DZ BANK       | 2–5 years  | 0.0           |               | 38.4                                 |               |
|               | 6–10 years | -6.0          |               | 14.2                                 |               |

 Not available

<sup>1</sup> The structural minimum liquidity surplus was calculated for the first time in 2024, which is why no figures as at December 31, 2023 are available.

#### 6.2.8 Possible impact from crystallized liquidity risk

One of the main operating activities of the management units is to make long-term liquidity available to their customers for different maturity periods and in different currencies, for example in the form of loans. The units generally organize their funding to match these transactions that tie up liquidity. Any funding needs that are not covered by the local cooperative banks are met by obtaining additional funding in the money and capital markets, with the deposit base from money market funding reducing the need for long-term funding. When funding matures, it is therefore possible that the replacement funding required to fund transactions with longer maturities has to be obtained at **unfavorable terms and conditions**.

The entities in the DZ BANK Group are also exposed to the risk that the minimum liquidity surplus will fall below the limit. If the minimum liquidity surplus were to fall below the limit for an extended period, the possibility of **reputational damage and a rating downgrade** could not be ruled out.

Crystallization of liquidity risk causes an unexpected **reduction in the liquidity surplus**, with potential negative consequences for DZ BANK's financial position and enterprise value. If a crisis were to occur in which the circumstances were more serious or the combination of factors were significantly different from those assumed in the stress scenarios, there would be a risk of **insolvency**.

### 6.3 Liquidity adequacy in the normative perspective

#### 6.3.1 Regulatory framework, organization, and responsibility

The normative perspective is based on the liquidity ratios required under Basel Pillar 1. Its objective is to assess the DZ BANK banking group's ability to comply with regulatory minimum requirements (plus an internally specified management buffer). Internal liquidity risk management is supplemented by the liquidity coverage ratio (LCR) and the net stable funding ratio (NSFR) calculated in line with the CRR requirements.

The **Group Financial Services** division calculates the liquidity ratios reported for supervisory purposes resulting from the CRR and Commission Delegated Regulation (EU) 2015/61 for the DZ BANK banking group and the liquidity subgroup.

#### 6.3.2 Liquidity coverage ratio

The liquidity coverage ratio has a short-term focus and is intended to ensure that institutions can withstand a liquidity stress scenario lasting 30 days. The LCR is defined as the ratio of available liquid assets (liquidity buffer) to total net cash outflows in defined stress conditions over the next 30 days. DZ BANK reports the LCR of the liquidity subgroup and that of the DZ BANK banking group, calculated in accordance with the CRR in conjunction with Commission Delegated Regulation (EU) 2015/61, to the supervisory authority on a monthly basis.

The LCRs for the **DZ BANK banking group** and the **liquidity subgroup** can be found in Fig. VI.14. The liquidity subgroup comprises DZ BANK and DZ HYP. The changes in the LCR in 2024 were unremarkable both at the level of the DZ BANK banking group and for the liquidity subgroup.

FIG. VI. 14 – LIQUIDITY COVERAGE RATIOS AND THEIR COMPONENTS

|                                          | DZ BANK banking group |               | Liquidity subgroup |               |
|------------------------------------------|-----------------------|---------------|--------------------|---------------|
|                                          | Dec. 31, 2024         | Dec. 31, 2023 | Dec. 31, 2024      | Dec. 31, 2023 |
| Total liquidity buffer (€ billion)       | 122.0                 | 125.6         | 106.2              | 105.8         |
| Total net liquidity outflows (€ billion) | 84.8                  | 86.1          | 76.6               | 74.0          |
| <b>LCR (percent)</b>                     | <b>143.9</b>          | <b>145.8</b>  | <b>138.6</b>       | <b>143.1</b>  |

As at the reporting date, the **external minimum target** laid down by the supervisory authorities, the **internal minimum threshold**, and the **internal observation threshold** for the LCR were exceeded for both the DZ BANK banking group and the liquidity subgroup. The target/threshold values are shown in Fig. VI.3 and Fig. VI.4.

#### 6.3.3 Net stable funding ratio

The net stable funding ratio has a long-term focus and is intended to identify mismatches between the maturity structures of assets-side and liabilities-side business. Its longer-term perspective means that it complements the LCR, which has a short-term focus.

The NSFR is the amount of available stable funding (equity and liabilities) relative to the amount of required stable funding (assets-side business). The funding sources are weighted according to their degree of stability and assets are weighted according to their degree of liquidity based on factors defined by the supervisory authority. Excess cover in relation to the NSFR is the difference between the available stable funding and the required stable funding.

The NSFRs calculated for the **DZ BANK banking group** and the **liquidity subgroup** are presented in Fig. VI.15. The liquidity subgroup comprises DZ BANK and DZ HYP. The changes in the NSFRs in 2024 were unremarkable both at the level of the DZ BANK banking group and for the liquidity subgroup.

FIG. VI.15 – NET STABLE FUNDING RATIO AND ITS COMPONENTS

|                                                                       | DZ BANK banking group |               | Liquidity subgroup |               |
|-----------------------------------------------------------------------|-----------------------|---------------|--------------------|---------------|
|                                                                       | Dec. 31, 2024         | Dec. 31, 2023 | Dec. 31, 2024      | Dec. 31, 2023 |
| Available stable funding (weighted equity and liabilities; € billion) | 290.7                 | 287.9         | 222.0              | 212.7         |
| Required stable funding (weighted assets; € billion)                  | 232.5                 | 227.6         | 186.6              | 178.7         |
| Excess cover/shortfall (€ billion) <sup>1</sup>                       | 58.1                  | 60.3          | 35.4               | 34.0          |
| <b>NSFR (percent)</b>                                                 | <b>125.0</b>          | <b>126.5</b>  | <b>119.0</b>       | <b>119.0</b>  |

<sup>1</sup> Excess cover = positive values, shortfall = negative values.

As at the reporting date, the **external minimum target** laid down by the supervisory authorities, the **internal minimum threshold**, and the **internal observation threshold** for the NSFR were exceeded for both the DZ BANK banking group and the liquidity subgroup. The target/threshold values are shown in Fig. VI.3 and Fig. VI.4.

## 7 Capital adequacy

### 7.1 Strategy, organization, and responsibility

#### 7.1.1 Strategy

The management of capital adequacy is an integral component of business management in the DZ BANK Group and the management units. Capital adequacy is defined as the holding of sufficient capital to cover the risks assumed by the business. It is considered from both an economic and a normative perspective. Whereas the economic perspective takes into account the requirements of the ECB Guide to the ICAAP and MaRisk BA, the normative perspective – while also taking account of the ECB Guide to the ICAAP – additionally applies the requirements from the CRR and the German national requirements for the implementation of the CRD.

The aim of the ICAAP is to ensure that, from two complementary perspectives (the economic and the normative perspectives), **capital resources are adequate** for an institution to be able to continue operating. Both perspectives are equally valid management approaches. They are integrated mainly on the basis of the risk inventory check, which the management uses to determine and specify the main risks in the DZ BANK Group.

All management units are included in the groupwide management of capital adequacy. Management of economic and normative capital adequacy aims to ensure that the assumption of risk is consistent with the capital resources of the DZ BANK Group, the DZ BANK financial conglomerate, and the DZ BANK banking group.

#### 7.1.2 Organization and responsibility

The **Board of Managing Directors of DZ BANK** defines the corporate objectives of the DZ BANK Group and DZ BANK in terms of both risks and returns and, in managing the risk profile, strives for an appropriate ratio between risk and risk coverage potential. DZ BANK is responsible for risk and capital management, and for compliance with capital adequacy at group level.

The management of economic and normative capital adequacy is based on internal target values. To avoid any unexpected adverse impact on **target values and capital ratios** and ensure that any changes in risk are consistent with corporate strategy, groupwide economic limits and risk-weighted assets are planned on an annual basis as part of the **strategic planning process**. This process results in a requirements budget for the economic and regulatory capital needed by the group. Any corresponding measures to raise capital are approved

by the Asset/Liability Committee or recommended to the Board of Managing Directors for approval. The implementation of the measures is then coordinated by **Group Treasury** at DZ BANK.

At DZ BANK, the **Group Finance** division is responsible for monitoring and reporting on regulatory capital adequacy. Regular monitoring is designed to ensure that the applicable minimum regulatory requirements for solvency are met at every reporting date. Monitoring takes place monthly for the DZ BANK financial conglomerate, the DZ BANK banking group, and DZ BANK, and at least quarterly for R+V.

## 7.2 R+V's volatility adjustment and transitional measure on technical provisions

R+V uses two measures defined by the supervisory authorities – the volatility adjustment and the transitional measure on technical provisions – for individual personal insurance companies. Fundamentally, both measures have a positive impact on economic and regulatory capital adequacy.

The **volatility adjustment**, which can be used indefinitely, prevents a brief phase of heightened market volatility from affecting the valuation of long-term insurance guarantees.

The **transitional measure on technical provisions** is a time-limited measure designed to make it easier for insurance companies to transition from Solvency I to the current regulatory regime, Solvency II. Having obtained permission to do so from BaFin, R+V has been using the transitional measure on technical provisions for individual personal insurance companies since 2020. Use of this measure generally reduces insurance liabilities and therefore means that additional own funds can be taken into account, which – all other things being equal – results in an increase in both economic and regulatory capital adequacy.

In view of the rise in interest rates, BaFin requested, at the start of 2024, that the affected insurance companies remeasure their transitional measure on technical provisions. The remeasurement carried out for R+V as at January 1, 2024 produced a value of zero for the transitional measure on technical provisions. As instructed by BaFin, DZ BANK has been using the remeasured figure to calculate economic and regulatory capital adequacy since June 30, 2024. This resulted in a reduction compared with the end of 2023 both in the DZ BANK Group's economic capital adequacy (see chapter VI.7.3.2) and in the coverage ratios of the DZ BANK financial conglomerate (see chapter VI.7.4.2) and of R+V (see chapter VI.7.4.4).

## 7.3 Capital adequacy in the economic perspective

### 7.3.1 Traffic light system

Economic capital adequacy is monitored and managed using a traffic light system based on the ratio of available internal capital to aggregate risk (expressed as a percentage). The switch from green to amber in the traffic light system (**amber threshold**) is set at the internal threshold value for economic capital adequacy specified in the risk appetite statement, which in 2024 was kept unchanged year on year at 120.0 percent. The amber threshold serves as an early-warning indicator. The **red threshold** is the borderline between amber and red in the traffic light system. It was set at 110.0 percent in the year under review, again unchanged compared with 2023. The threshold values for economic capital adequacy are reviewed annually and adjusted if necessary.

### 7.3.2 Risk-bearing capacity

#### Retrospective recalculation of the overall solvency requirement

The annual recalculation of the overall solvency requirement took place as at December 31, 2024 owing to scheduled changes to the parameters for the risk measurement procedures carried out in the second quarter of 2025 for the Insurance sector on the basis of R+V's 2023 consolidated financial statements and the updating of actuarial assumptions. The recalculation reflects updated measurements of insurance liabilities based on annual actuarial analyses and updates to parameters in the risk capital calculation. Because of the complexity and the amount of time involved, the parameters are not completely updated in the in-year calculation and an appropriate projection is made.

The recalculation led to changes in the available internal capital, the key risk indicators at the level of the DZ BANK Group, and economic capital adequacy. The figures as at December 31, 2024 given in this risk report have been restated accordingly and are not directly comparable with the figures in the 2023 risk report.

#### Available internal capital and limit

**Available internal capital** is the economic value of equity. The equity used to determine available internal capital is the equity recognized on the balance sheet as calculated in accordance with the relevant accounting standards, plus/minus reserves and liabilities in respect of assets and liabilities, measured at present value. Adjustments are also made, in particular the deduction of components of additional Tier 1 capital.

The available internal capital is determined as follows:

- The available internal capital of the Bank sector is calculated on the basis of the IFRS data in accordance with regulatory financial reporting. In this process, R+V is not fully consolidated but taken into account using the equity method.
- The available internal capital of the Insurance sector is based on the own funds of R+V in accordance with Solvency II.
- The available internal capital from the two sectors is combined to produce the available internal capital of the DZ BANK Group. During this process, the effects of consolidation between the Bank and Insurance sectors are taken into account, resulting in a reduction in the available internal capital at group level.

The available internal capital is reviewed on a quarterly basis and, to some extent, on a monthly basis.

The Board of Managing Directors determines the risk capital requirement **limits** for the year on the basis of the available internal capital. If necessary, the limits can be adjusted during the year, e.g. if economic conditions change.

The DZ BANK Group's **available internal capital** as at December 31, 2024 stood at €28,987 million. The comparable figure as at December 31, 2023 was €31,720 million. The decrease in available internal capital compared with the end of 2023 was largely attributable to the remeasurement of the transitional measure on technical provisions. The inclusion of the resulting value of zero for the transitional measure on technical provisions served to increase insurance liabilities in the life insurance business and thereby decrease the surplus of assets over liabilities on the Solvency II balance sheet in the Insurance sector. Remeasuring the transitional measure on technical provisions had an overall impact of €3.6 billion on the DZ BANK Group's available internal capital.

The **limit** derived from the available internal capital was specified at €21,191 million as at December 31, 2024 (December 31, 2023: €19,698 million).

As at December 31, 2024, **aggregate risk** was calculated at €14,660 million. The comparable figure as at December 31, 2023 was €15,170 million.

#### Economic capital adequacy

As at December 31, 2024, the **economic capital adequacy ratio** for the DZ BANK Group was calculated at 197.6 percent. The comparable figure as at December 31, 2023 was 209.1 percent. The decrease in available internal capital compared with December 31, 2023 was sharper than the decrease in aggregate risk. This led to a decline in economic capital adequacy.

As at the reporting date, the economic capital adequacy ratio was above the **external minimum target**, the **internal minimum threshold**, and the **internal observation threshold**. The target/threshold values are shown in Fig. VI.3.

Fig. VI.16 provides an overview of economic capital adequacy and its components.

FIG. VI.16 – ECONOMIC CAPITAL ADEQUACY OF THE DZ BANK GROUP

|                                                        | Dec. 31, 2024 | Dec. 31, 2023 |
|--------------------------------------------------------|---------------|---------------|

The limits and risk capital requirements for the **Bank sector**, broken down by risk type, are shown in Fig. VI.17.

FIG. VI.17 – LIMITS AND RISK CAPITAL REQUIREMENTS IN THE BANK SECTOR

| € million                                                      | Limit         |               | Risk capital requirement |               |
|----------------------------------------------------------------|---------------|---------------|--------------------------|---------------|
|                                                                | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024            | Dec. 31, 2023 |
| Credit risk                                                    | 4,994         | 4,988         | 4,011                    | 3,971         |
| Equity investment risk                                         | 1,364         | 1,281         | 807                      | 998           |
| Market risk                                                    | 7,120         | 6,470         | 3,621                    | 4,169         |
| Technical risk of a home savings and loan company <sup>1</sup> | 820           | 820           | 719                      | 730           |
| Business risk <sup>2</sup>                                     | 500           | 450           | –                        | 363           |
| Operational risk                                               | 1,157         | 1,148         | 1,041                    | 978           |
| <b>Total (after diversification)</b>                           | <b>14,941</b> | <b>14,218</b> | <b>9,565</b>             | <b>10,471</b> |

<sup>1</sup> Including business risk and reputational risk of BSH.

<sup>2</sup> Apart from that of BSH, reputational risk is contained in the risk capital requirement for business risk.

Fig. VI.18 sets out the limits and overall solvency requirements for the **Insurance sector**, broken down by risk type, and includes policyholder participation features. The definition of the limits and determination of overall solvency requirements take into account the ability to offset deferred taxes against losses (which arises where deferred tax liabilities can be eliminated in the loss scenario). Diversification effects between the risk types are also taken into consideration. Owing to these effects of correlation, the overall solvency requirement and limit for each risk type are not cumulative.

FIG. VI.18 – LIMITS AND OVERALL SOLVENCY REQUIREMENTS IN THE INSURANCE SECTOR

| € million                                      | Limit         |               | Overall solvency requirement |                            |
|------------------------------------------------|---------------|---------------|------------------------------|----------------------------|
|                                                | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024                | Dec. 31, 2023 <sup>1</sup> |
| Life actuarial risk <sup>2</sup>               | 1,100         | 1,060         | 927                          | 946                        |
| Health actuarial risk                          | 400           | 285           | 335                          | 255                        |
| Non-life actuarial risk                        | 2,250         | 1,900         | 2,013                        | 1,823                      |
| Market risk                                    | 4,450         | 3,695         | 3,965                        | 3,580                      |
| Counterparty default risk                      | 325           | 245           | 252                          | 219                        |
| Operational risk                               | 800           | 700           | 678                          | 627                        |
| Risks from entities in other financial sectors | 265           | 225           | 194                          | 217                        |
| <b>Total (after diversification)</b>           | <b>5,700</b>  | <b>4,800</b>  | <b>4,620</b>                 | <b>4,308</b>               |

<sup>1</sup> Values after recalculation of the overall solvency requirement. Different values were stated in the 2023 risk report.

<sup>2</sup> Reputational risk is implicitly included in the overall solvency requirement for life actuarial risk (lapse risk).

In addition to the figures shown in Fig. VI.17 and Fig. VI.18, the aggregate risk includes **a centralized capital buffer requirement across all types of risk**, which was calculated at €475 million as at December 31, 2024 (December 31, 2023: €391 million). The corresponding **limit** was €550 million (December 31, 2023: €680 million). The increase in the centralized capital buffer requirement was primarily due to equity investment risk.

### 7.3.3 Possible impact from crystallized risk covered by capital

If risk were to materialize and associated losses be incurred, there would be a risk that the risk capital requirement would exceed the available internal capital and the DZ BANK Group would thus **miss its economic capital adequacy target**. However, this situation could also occur with an increase in risk arising from heightened market volatility or as a consequence of changes in the business structure. Additional or more stringent regulatory requirements could also have a negative impact on the economic capital adequacy of the DZ BANK Group.

In a situation in which the economic capital adequacy of the DZ BANK Group could not be guaranteed, there would be insufficient capital available to meet the group's own standards with regard to the coverage of risk. If there is also insufficient capital to meet the level of protection demanded by the supervisory authority, this authority could initiate action, which in extreme cases could lead to the **resolution** of DZ BANK or its subsidiaries.

## 7.4 Capital adequacy in the normative perspective

### 7.4.1 Regulatory framework

The normative perspective is based on the capital ratios laid down by the supervisory authorities. It comprises three management dimensions: monitoring of actual regulatory KPIs, capital planning, and adverse stress tests.

Whereas the monitoring of actual and projected figures, together with capital planning, in the baseline scenario focuses on the current regulatory ratios and their changes in probable scenarios, the analysis of these ratios in adverse scenarios is based on capital planning and the quarterly adverse stress tests.

From the normative perspective, risk-bearing capacity is assured if, in the medium term, all regulatory minimum solvency requirements are met, even in crisis situations. An internal management buffer over and above the regulatory requirements for each ratio is also included in order to ensure that the group has an adequate level of capital.

The normative perspective is an integral part of the ICAAP. The key risk indicators in the normative perspective are specified by the regulatory requirements, mainly the CRR and the CRD, but the selection and specific design of the scenarios are internal decisions. With due regard to regulatory and supervisory guidance, such as the ECB Guide to the ICAAP and the EBA Guidelines on stress testing, the DZ BANK Group selects and simulates scenarios that adequately reflect the vulnerabilities of the business models operated in the group. The scenarios to be analyzed are determined at least once a year.

The regulatory ratios presented below are used as part of the internal management of the DZ BANK financial conglomerate, the DZ BANK banking group, and DZ BANK. The procedures used to determine these ratios are those that are required under the CRR transitional guidance.

## 7.4.2 DZ BANK financial conglomerate

The DZ BANK financial conglomerate comprises the DZ BANK banking group and R+V. FKAG forms the main legal basis for the supervision of the DZ BANK financial conglomerate. The calculation methodology for the coverage ratio is taken from Commission Delegated Regulation (EU) No. 342/2014 in conjunction with article 49 (1) CRR. The financial conglomerate coverage ratio is the ratio between the total of own funds in the financial conglomerate and the total of solvency requirements for the conglomerate. The resulting ratio must be at least 100.0 percent.

The changes in the coverage ratio and in the own funds and solvency requirements of the DZ BANK financial conglomerate are shown in Fig. VI.19.

FIG. VI.19 – REGULATORY CAPITAL ADEQUACY OF THE DZ BANK FINANCIAL CONGLOMERATE<sup>1</sup>

|                                   | Dec. 31,<br>2024 <sup>2</sup> | Dec. 31,<br>2023 <sup>3</sup> |
|-----------------------------------|-------------------------------|-------------------------------|
| Own funds (€ million)             | 37,651                        | 39,195                        |
| Solvency requirements (€ million) | 27,835                        | 25,694                        |
| <b>Coverage ratio (percent)</b>   | <b>135.3</b>                  | <b>152.5</b>                  |

<sup>1</sup> The values for the DZ BANK banking group included in the calculations were determined in accordance with the CRR transitional guidance.

<sup>2</sup> Preliminary figures.

<sup>3</sup> Final figures. Preliminary figures were stated in the 2023 risk report.

The coverage ratio calculated for the DZ BANK financial conglomerate declined from 152.5 percent as at December 31, 2023 to 135.3 percent as at December 31, 2024. This was attributable, in particular, to the decrease of €1,545 million in own funds resulting from the remeasurement of the transitional measure on technical provisions as at January 1, 2024. It was also due to an increase in solvency requirements of €2,141 million. The effects that led to this change in the coverage ratio were attributable to the DZ BANK banking group and R+V (see also chapter VI.7.4.3 and chapter VI.7.4.4).

The preliminary coverage ratio calculated for the financial conglomerate as at December 31, 2024 was higher than the **external minimum target** laid down by the supervisory authorities, the **internal minimum threshold**, and the **internal observation threshold**. The target/threshold values are shown in Fig. VI.3.

## 7.4.3 DZ BANK banking group

### Procedure for determining risk-weighted assets

Capital adequacy from a normative perspective serves to ensure that the regulatory capital requirements and rules on capital are met. As part of risk-based banking supervision, it is intended to ensure that a bank's exposures are backed by capital in a volume that is as appropriate as possible for the risk involved. Capital adequacy is defined as meeting the minimum requirements for the common equity Tier 1 capital ratio, the Tier 1 capital ratio, and the total capital ratio.

For all three ratios, the relevant items of capital are calculated using the CRR rules and compared with the total risk exposure determined under the CRR (referred to below as risk assets). If the ratios calculated in this way exceed the minimum regulatory ratios, the requirements are deemed met.

The entities in the DZ BANK banking group use the following methods to calculate the risk-weighted assets in accordance with the CRR:

- **Credit risk:** Primarily the foundation internal ratings-based (IRB) approach, the IRB approach for the retail business and, in some cases, the Standardized Approach to credit risk
- **Market risk:** Predominantly the group's own internal models and, to a minor extent, the Standardized Approaches
- **Operational risk:** Primarily the Standardized Approach

#### Regulatory minimum capital requirements

The minimum capital requirements that the DZ BANK banking group had to comply with in 2024 under the Supervisory Review and Evaluation Process for Basel Pillar 2 (SREP) comprised those components of Pillar 1 laid down as mandatory by law and those individually specified by the banking supervisor.

Institution-specific requirements under the additional capital requirements in Pillar 2, determined in the outcome of the SREP conducted for the DZ BANK banking group in 2023, also have to be satisfied. In this process, the banking supervisor specifies a mandatory add-on (**Pillar 2 requirement**) that is factored into the external minimum targets for the capital ratios and into the basis of calculation used to determine the threshold for the maximum distributable amount (MDA). Distributions are restricted if capital falls below the MDA threshold.

In addition to this mandatory component, there is a recommended own funds amount under Pillar 2 (**Pillar 2 guidance**), which likewise is determined from the SREP, but unlike the mandatory component relates only to common equity Tier 1 capital. Failure to comply with the own funds guidance under Pillar 2 does not constitute a breach of regulatory capital requirements. Nevertheless, this figure is relevant as an early-warning indicator.

BaFin has classified DZ BANK as an other systemically important institution (O-SII). The DZ BANK banking group had to comply with an **O-SII capital buffer** (comprising common equity Tier 1 capital) as defined in section 10g (1) KWG at a level of 1.0 percent in 2024.

The minimum capital requirements applicable to **DZ BANK** comprised those components of **Pillar 1** laid down as mandatory by law and those individually specified by the banking supervisor. Pillar 2 add-ons are currently not relevant to DZ BANK.

The mandatory minimum capital requirements relevant to the DZ BANK banking group and DZ BANK under the SREP, and their components, are shown in Fig. VI.20.

#### Regulatory capital ratios

The regulatory **own funds** of the **DZ BANK banking group** as at December 31, 2024 determined in accordance with the CRR transitional guidance amounted to a total of €32,738 million (December 31, 2023: €30,647 million). This equated to a rise in own funds of €2,091 million compared with December 31, 2023 that mainly resulted from an increase in common equity Tier 1 capital of €2,031 million.

The increase in **common equity Tier 1 capital** from €23,632 million as at December 31, 2023 to €25,663 million as at the reporting date was primarily due to the interim profit of €1,606 million as at the reporting date, which was calculated taking account of all regulatory dividends and charges and was approved in accordance with Decision (EU) 2015/656 of the ECB. Moreover, switching to the dividend actually distributed for 2023 in May 2024 raised the retained earnings by €332 million because the dividend of €780 million as forecast for 2023 on the basis of regulatory requirements in accordance with Decision (EU) 2015/656 of the ECB was previously taken into account.

The rise of €10,415 million in **risk-weighted assets** from €152,148 million as at December 31, 2023 to €162,563 million as at December 31, 2024 was largely attributable to three effects:

- Risk-weighted assets for credit risk (including long-term equity investments) went up by €7,727 million. This rise was mainly due to the higher measurement, using the equity method, of DZ BANK's long-term equity investment in R+V, business growth, portfolio adjustments during the course of the year, and changes to the internal model.
- The €1,861 million rise in risk-weighted assets for operational risk resulted from the improvement in earnings for the previous year (calculated in accordance with IFRS) compared with the corresponding earnings for 2023.
- Furthermore, the risk-weighted assets determined for market risk advanced by €826 million.

FIG. VI.20 – REGULATORY MINIMUM CAPITAL REQUIREMENTS

| Percent                                                               | DZ BANK banking group |             | DZ BANK     |             |

 Not available

<sup>1</sup> The amount of the countercyclical capital buffer and the systemic risk buffer is recalculated at each reporting date. Unlike the other reported values, which apply to the entire financial year, the countercyclical capital buffers shown for 2024 and 2023 relate solely to the reporting dates.

<sup>2</sup> The minimum requirement and additional capital requirement can also be satisfied with own funds from higher categories.

As at December 31, 2024, the DZ BANK banking group's **common equity Tier 1 capital ratio** was 15.8 percent, an increase of 0.3 percentage points compared with December 31, 2023 (15.5 percent). The **Tier 1 capital ratio** of 17.8 percent calculated as at the reporting date was 0.1 percentage points higher than the figure as at December 31, 2023 (17.7 percent). The **total capital ratio** remained unchanged year on year at 20.1 percent as at December 31, 2024.

Fig. VI.21 provides an overview of the regulatory capital ratios for the DZ BANK banking group and for DZ BANK.

The **external minimum targets**, **internal minimum thresholds**, and **internal observation thresholds** for the common equity Tier 1 capital ratio, the Tier 1 capital ratio, and the total capital ratio were exceeded at the level of the DZ BANK banking group and DZ BANK as at December 31, 2024. The target/threshold values are shown in Fig. VI.3 and Fig. VI.4.

FIG. VI.21 – REGULATORY CAPITAL RATIOS<sup>1</sup>

|                                                                | DZ BANK banking group |                | DZ BANK        |                |

<sup>1</sup> In accordance with the CRR transitional guidance.

#### Leverage ratio

The **leverage ratio** shows the ratio of Tier 1 capital to the total exposure measure. In contrast to credit-risk-related capital requirements for which the assumptions are derived from models, the individual exposures in the calculation of the leverage ratio are not allocated their own risk weight but are generally included in the total exposure measure without being weighted. The total exposure measure comprises exposures reported on the balance sheet (excluding derivatives and securities financing transactions), derivatives exposures, securities financing transaction exposures, and other off-balance-sheet exposures.

The leverage ratio and its components are shown in Fig. VI.22.

FIG. VI.22 – LEVERAGE RATIO AND ITS COMPONENTS

|                                    | DZ BANK banking group |               | DZ BANK       |               |
|------------------------------------|-----------------------|---------------|---------------|---------------|
|                                    | Dec. 31, 2024         | Dec. 31, 2023 | Dec. 31, 2024 | Dec. 31, 2023 |
| Tier 1 capital (€ billion)         | 29.0                  | 26.9          | 18.2          | 17.9          |
| Total exposure measure (€ billion) | 440.6                 | 432.6         | 272.0         | 262.4         |
| <b>Leverage ratio (percent)</b>    | <b>6.6</b>            | <b>6.2</b>    | <b>6.7</b>    | <b>6.8</b>    |

The leverage ratio of the **DZ BANK banking group** determined in accordance with the CRR transitional guidance was up by 0.4 percentage points as at December 31, 2024. This is due to the €2.0 billion rise in Tier 1 capital in the numerator and a comparatively low €8.0 billion increase in the total exposure measure in the denominator. The leverage ratio of **DZ BANK** calculated as at the reporting date decreased slightly year on year.

The leverage ratios for the DZ BANK banking group and DZ BANK exceeded the **external minimum targets**, the **internal minimum thresholds**, and the **internal observation thresholds** as at the reporting date. The target/threshold values are shown in Fig. VI.3 and Fig. VI.4.

#### Minimum requirement for own funds and eligible liabilities

The Bank Recovery and Resolution Directive (BRRD), Implementing Regulation (EU) No. 806/2014 establishing a Single Resolution Mechanism, and the transposition of the BRRD into German law in the form of SAG created the legal basis at European and national level for a single resolution mechanism for banks.

The MREL requirements introduced with the BRRD are intended to ensure that banks hold a sufficiently large volume of own funds and liabilities that can be 'bailed-in' to make it possible at all times to carry out an orderly resolution. 'Bail-in-able' liabilities are those that provide for creditors to take an interest in losses incurred and recapitalization if a bank gets into financial difficulties, enabling resolution to take place on the basis of the bail-in and other instruments without recourse to government help and without jeopardizing the stability of the financial system.

The **MREL ratio as a percentage of risk-weighted assets** is the ratio of the MREL volume to the total risk exposure amount (risk-weighted assets) of the DZ BANK banking group. The MREL volume is the total of the regulatory own funds of the DZ BANK banking group and the eligible external MREL liabilities of DZ BANK. To calculate the **subordinated MREL ratio as a percentage of risk-weighted assets**, only the subordinated MREL liabilities are included in the numerator in addition to the regulatory own funds of the DZ BANK banking group. The denominator is the same as for the MREL ratio.

The **MREL ratio as a percentage of the leverage ratio exposure** is the ratio of the MREL volume to the total exposure measure, which comprises on-balance-sheet asset items and off-balance-sheet items (including derivatives), known as the leverage ratio exposure of the DZ BANK banking group. To calculate the **subordinated MREL ratio as a percentage of the leverage ratio exposure**, only the subordinated MREL liabilities are included in the numerator in addition to the regulatory own funds of the DZ BANK banking group. The denominator is the same as for the MREL ratio.

The MREL ratios are calculated for the DZ BANK banking group, but not for DZ BANK. The calculated MREL ratios are shown in Fig. VI.23.

FIG. VI.23 – MINIMUM REQUIREMENT FOR OWN FUNDS AND ELIGIBLE LIABILITIES OF THE DZ BANK BANKING GROUP

| Percent                                                     | Dec. 31, 2024 | Dec. 31, 2023 |
|-------------------------------------------------------------|---------------|---------------|
| <b>MREL ratio</b>                                           |               |               |
| as a percentage of risk-weighted assets <sup>1</sup>        | 36.2          | 37.6          |
| as a percentage of the leverage ratio exposure <sup>2</sup> | 13.4          | 13.2          |
| <b>Subordinated MREL ratio</b>                              |               |               |
| as a percentage of risk-weighted assets <sup>3</sup>        | 29.5          | 31.1          |
| as a percentage of the leverage ratio exposure              | 10.9          | 10.9          |

1 Corrected figure as at December 31, 2023. Original figure given in the 2023 risk report: 42.4 percent.

2 Corrected figure as at December 31, 2023. Original figure given in the 2023 risk report: 14.9 percent.

3 Corrected figure as at December 31, 2023. Original figure given in the 2023 risk report: 31.0 percent.

The **external minimum targets**, **internal minimum thresholds**, and **internal observation thresholds** applicable to the MREL ratios and the subordinated MREL ratios were exceeded as at December 31, 2024. The target/threshold values are shown in Fig. VI.3.

#### 7.4.4 R+V

The regulatory solvency requirements for insurance companies and insurance groups provide a means of evaluating the overall risk position at R+V.

The group's risk-bearing capacity for regulatory purposes is defined as the eligible own funds at group level in relation to the risks arising from operating activities. The changes in the regulatory risk-bearing capacity of R+V as a whole and each of its constituent entities are analyzed at least once a quarter.

The preliminary figure for the **regulatory risk-bearing capacity** of R+V as at December 31, 2024 was calculated at 168.5 percent. The coverage ratio was thus above the external minimum target of 100.0 percent, which was the same target as had applied in 2023. The final figure as at December 31, 2023 was 224.1 percent (preliminary figure given in the 2023 risk report: 230.2 percent).

Fig. VI.24 shows how the solvency requirements are covered by eligible own funds.

FIG. VI.24 – REGULATORY CAPITAL ADEQUACY OF R+V

|                                   | Dec. 31, 2024 <sup>1</sup> | Dec. 31, 2023 <sup>2</sup> |
|-----------------------------------|----------------------------|----------------------------|
| Own funds (€ million)             | 14,810                     | 17,642                     |
| Solvency requirements (€ million) | 8,791                      | 7,871                      |
| <b>Coverage ratio (percent)</b>   | <b>168.5</b>               | <b>224.1</b>               |

<sup>1</sup> Preliminary figures.

<sup>2</sup> Final figures. The preliminary figures were stated in the 2023 risk report.

The changes in the regulatory risk-bearing capacity are primarily due to the decrease in own funds resulting from the remeasurement of the transitional measure on technical provisions. In addition, the solvency requirements increased as a result of lower policyholder participation in risk.

The **recalculation of the overall solvency requirement** described in chapter VI.7.3.2 for economic risk-bearing capacity also affected the regulatory risk-bearing capacity of R+V and led to retrospective changes in the solvency requirements as at the end of 2023. The prior-year figures as at December 31, 2023 given in this risk report have been restated accordingly and are not directly comparable with the figures in the 2023 risk report.

## 7.5 Stress tests for types of risk covered by capital

### 7.5.1 Adverse stress tests

Adverse stress tests are used to examine the impact on capital, liquidity, and risk from potential **crisis scenarios** that are exceptional, but plausible, and particularly relevant to the DZ BANK Group's value drivers and risk factors. The **KPIs** relating to economic and regulatory capital adequacy are analyzed in this context. However, the stress tests also reflect events that go beyond the methods established for calculating capital adequacy. The term 'adverse stress tests' encompasses those stress scenarios that represent negative macroeconomic trends or events from the perspective of the DZ BANK Group. In this context, 'adverse' indicates that the scenarios may be particularly disadvantageous or even harmful.

Adverse stress tests can provide information on whether the level of capital resources – especially the buffer held to cover crisis situations – is also sufficient to cover various types of moderate to serious crisis scenario. The stress test results also facilitate an assessment of the extent to which the analyzed value drivers and risk factors are material for the DZ BANK Group.

The methods used are designed so that the specific features of R+V's business model and its risk and capital management systems are taken into account when determining the results of stress testing in the DZ BANK Group.

For the adverse stress tests, DZ BANK has put in place a system of threshold values as an **early-warning mechanism**. The threshold values for the scenarios across all risk types are monitored in the ongoing reporting system. These early-warning signals trigger various risk management processes so that there can be an early response to the potential risks highlighted by the stress tests. Control measures potentially available for the crisis scenario in question are also taken into account so that there is a comprehensive, critical evaluation of the stress test results.

### 7.5.2 Reverse stress tests

Reverse stress tests complement the adverse stress tests and are used to investigate which of the hypothetical scenarios could conceivably be sufficiently plausible and relevant to jeopardize the ability of the DZ BANK Group to **continue as a going concern**.

‘Reverse’ indicates that the tests are in the opposite direction and distinguishes them from the adverse stress tests. In adverse stress tests, scenarios are defined and the corresponding KPIs determined in order to assess whether there is a sufficient level of capital resources available to cover moderate or serious crisis scenarios. Reverse stress tests, on the other hand, examine which scenarios would have to occur to jeopardize the DZ BANK Group’s ability to continue as a going concern.

In reverse stress tests, the risk particularly to the regulatory KPIs is simulated with scenarios in which it would no longer be feasible to **continue the business model** or in which the business model would prove to be no longer sustainable. In the case of reverse stress tests, the priorities are therefore as follows: firstly, to identify relevant scenario approaches that could have the potential to jeopardize the bank’s ability to continue as a going concern, and secondly, to estimate the probability and plausibility of a specific, sufficiently serious scenario of this nature.

### 7.5.3 Scenario analyses in the risk types

The adverse and reverse stress tests are supplemented by a credit risk stress test in the normative perspective and by various risk type-specific scenario analyses in the economic perspective. These analyses serve as a link between vulnerabilities and sensitivities on the one hand and between potential events and adverse scenarios on the other. The scenario analyses also enhance the risk quantification for each risk type by including an alternative perspective.

In the scenario analyses, specific vulnerabilities, risk concentrations, or events are examined in detail for each type of risk by simulating economic losses and comparing them against the relevant risk limit.

### 7.5.4 Climate stress tests

DZ BANK carries out **exploratory climate risk scenario analysis** in order to obtain a quantitative assessment of the materiality of relevant climate risk factors. This analysis includes the simulation of effects of different physical scenarios (including river flooding and forest fire) and transition scenarios on the DZ BANK Group. For the transition scenarios, macroeconomic models are combined with company- and sector-specific channels of impact and with data relating to the energy efficiency of real estate collateral. Various transmission channels are examined in terms of credit risk, market risk, reputational risk, operational risk, and insurance-related risks. The impacts on economic and normative capital adequacy are presented too.

**Climate risks in the adverse stress tests** are also factored in, for example by analyzing a specific adverse scenario that represents accelerated climate transition.

# Bank sector

## 8 Credit risk

### 8.1 Definition

**Credit risk** is defined as the risk of losses arising from the default of counterparties (borrowers, issuers, other counterparties) or from the migration of the credit ratings of these counterparties, or of losses in connection with the recovery of loans, advances, receivables, or collateral.

Credit risk may arise in traditional lending business and also in trading activities. **Traditional lending business** is for the most part commercial lending, including financial guarantee contracts and loan commitments. In the context of credit risk management, **trading activities** refer to securities business in the banking book and trading book, money market business, transactions involving tradable loans and advances (such as promissory notes), currency transactions, transactions involving derivatives, and transactions involving commodities (such as precious metals).

In **traditional lending business**, credit risk arises mainly in the form of default risk and migration risk. In this context, default risk refers to the risk that a customer may be unable to settle receivables arising from loans or advances made to the customer (including lease receivables) or make due payments. It also includes risks arising from contingent liabilities (such as issued guarantees and indemnities). In addition to loans that have already been drawn down (including any existing overdrawn accounts), the calculation of the exposure encompasses undrawn loan facilities promised to third parties. Migration risk is a sub-risk within traditional credit risk and reflects the risk of changes in the fair value of types of exposure in the traditional lending business caused by a change in the rating for a borrower (rating migration).

Credit risk in connection with **trading activities** arises in the form of default risk, which can be subdivided into issuer risk, replacement risk, and settlement risk, depending on the type of transaction involved.

**Issuer risk** is the risk of default of issuers of tradable debt or equity instruments (such as bonds, shares, profit-participation certificates), of underlying instruments in derivatives (for example, credit or equity derivatives), or a default in connection with investment fund units or the underlying assets.

**Replacement risk** on derivatives is the risk of a counterparty defaulting during the term of a trading transaction.

**Transaction processing risk** is a default risk subcategory of replacement risk. It arises in connection with both delivery-versus-payment (DVP) settlement and unilateral payments in a trading transaction and is the result of the counterparty in a trading transaction being unable to perform its contractual obligation.

**Migration risk** is another sub-risk within replacement risk and reflects the danger of changes in fair value caused by a change in the rating for a counterparty (rating migration). For the migration risk of OTC derivatives, the term CVA risk is used, which also includes spread risk. CVA stands for credit valuation adjustment.

**Settlement risk** arises when there are two mutually conditional payments and there is no guarantee that when the outgoing payment is made the incoming payment will be received. Settlement risk is the risk of a loss if counterparties do not meet their obligations, counter-performance already having taken place.

**Recovery risk** forms part of credit risk. It cannot be determined as an exposure amount but increases the risk capital requirement for traditional credit risk, issuer risk, and replacement risk. Recovery risk results from uncertainty regarding the recovery rate for existing collateral and uncertainty regarding the recovery rate for unsecured receivables (or partial receivables).

**Country risk** is also included within credit risk. Country risk in the narrower sense of the term refers to conversion, transfer, payment prohibition, or moratorium risk (CTPM risk). It is the risk that a foreign government may impose restrictions preventing a debtor in the country concerned from transferring funds to a foreign creditor. It also includes the danger that a creditor is prohibited from accepting a payment due to sanctions or other restrictive measures imposed by intermediary countries or the creditor's home country.

Another form of CTPM risk is the risk of cross-border payments no longer being made in the agreed currency and instead being made in another currency (local currency or third-party currency). This can be due to statutory rules or individual agreements requiring this in response to a CTPM risk event in relation to the contractual currency. In the broader sense of the term, country risk refers to sovereign risk (the risk arising from exposure to a government itself) or the risk that the quality of the overall exposure in a country may be impaired as a result of country-specific events (country-related borrower risk). In this case, it is not viewed as a separate risk type but as a component of credit risk and is thus recorded within traditional credit risk, issuer risk, and replacement risk.

## 8.2 Business background and risk strategy

The DZ BANK Group is exposed to considerable credit risk in the Bank sector. The lending business is one of the most important core activities of the entities in the Bank sector. In its role as the central institution, DZ BANK covers a **broad range of lending business**, either in partnership with the local cooperative banks or in direct business, and provides its customers with financing solutions. Its customers include the local cooperative banks themselves, corporate customers, retail customers, the public sector, international companies, and banks and institutions both in Germany and abroad.

**Default risk from traditional lending business** arises primarily at DZ BANK, DZ HYP, BSH, and TeamBank. The risk results from the specific transactions in each management unit and therefore has varying characteristics in terms of diversification and size in relation to the volume of business.

**Default risk relating to trading transactions** arises from issuer risk, particularly in connection with the trading activities and investment business of DZ BANK. Replacement risk arises for the most part at DZ BANK and DZ PRIVATBANK.

The entities in the Bank sector pursue a decentralized business policy aimed at promoting the cooperative banks and are bound by the core strategic guiding principle of fulfilling the role of a **network-oriented central institution and financial services group**. The business and risk policy for the credit-risk-bearing core businesses in the group is formulated on the basis of risk-bearing capacity. The credit risk strategy therefore forms the basis for credit risk management and reporting across the whole group and ensures that there is a standard approach to credit risk within the group. It takes into account the business models of each of the management units.

The management units aim to ensure that their credit portfolios always have a **sound credit quality and risk structure**. One of the objectives is to make sure that the portfolios remain highly diversified going forward.

## 8.3 Risk factors

### 8.3.1 General credit risk factors

Key values used in determining credit risk include the concentrations of lending volume in terms of counterparties, sectors, country groups, and residual maturities, and the credit quality structure of the credit portfolio. **Significant concentrations of volume** in counterparties, sectors, or countries increase the risk that an accumulation of credit risk will become critical, for example if there are defaults among greater concentrations of counterparties or, in economic crises, defaults in sectors or countries with significant concentrations in the credit portfolio.

The term of loan agreements is also a key credit risk factor because the probability of a deterioration in credit rating and therefore of a counterparty default during the term of an agreement generally increases over time.

Particularly in the case of an **accumulation of exposures that have longer terms to maturity** and a non-investment-grade rating, there is a danger that the credit risk will materialize and the recognition of impairment losses will become necessary.

### 8.3.2 Specific credit risk factors

#### Negative macroeconomic conditions

In addition to the general risk factors, negative macroeconomic conditions could lead to higher credit risk, more defaults among individual counterparties, and therefore a greater need to recognize impairment losses in the lending business. The biggest threats to general borrower credit quality stem from the following adverse factors:

- Escalation of geopolitical tensions and resulting trade friction (chapter VI.5.2.1)
- Global economic downturn (chapter VI.5.2.2)
- Ongoing weakness in the German economy (chapter VI.5.2.4)
- Correction in real estate markets (chapter VI.5.2.5)

If the macroeconomic trends described there persist for a while longer yet, or escalate, credit risk in the Bank sector will likely rise significantly.

The lending exposures affected to differing extents by these macroeconomic risk factors are described in chapters VI.8.8, VI.8.9, and VI.8.10.

#### Sustainability risk factors

Negative cross-sectoral or sector-specific **climate-related developments** and negative **transition effects** can directly or indirectly cause the financial circumstances of counterparties – borrowers, issuers, and other counterparties – to deteriorate. This can lead to higher probabilities of default and lower credit ratings for the relevant counterparties and to a greater need for the entities in the Bank sector to recognize impairment losses. There is also a risk that collateral for loan exposures could become impaired. The degree to which the entities in the Bank sector are affected by climate-related and environmental risks depends on their individual business model.

### 8.4 Organization and responsibility

Responsibilities in the lending process have been laid down and are documented in a written set of procedural rules. These responsibilities cover loan applications, approvals, and termination, including periodic credit control with regular analysis of ratings. Decision-making authority levels are specified by the relevant **rules** based on the risk content of lending transactions.

Established **reporting and monitoring processes** help to provide decision-makers with information about the risk structure of credit portfolios and changes therein and form the basis for managing credit risk.

### 8.5 Risk management

#### 8.5.1 Rating systems

##### Use and characteristics of the rating systems

The generation of internal credit ratings for the counterparties of entities in the Bank sector helps to provide a solid basis for lending decisions and loan monitoring processes. In addition, internal ratings are used to incorporate the credit quality of the counterparties when calculating expected and unexpected losses in the credit portfolio. In this way, credit quality is included in risk measurement, pricing, risk management, and the calculation of loss allowances.

The **VR rating system** used as standard throughout the Cooperative Financial Network aims to ensure that all the entities in the network apply a sophisticated uniform methodology producing ratings that are comparable.

DZ BANK primarily uses rating systems in its credit risk management system to assess large corporates, banks, investment funds, and project finance (slotting approach). The internal assessment approach is also used to evaluate the liquidity lines and credit enhancements made available by DZ BANK to programs for the issuance of asset-backed commercial paper (ABCP). These rating systems have been approved by the competent supervisory authority for the purposes of calculating regulatory capital using the **foundation IRB approach** or the **slotting approach**.

For **internal management purposes**, DZ BANK uses further rating systems to assess small and medium-sized enterprises (corporate customers, including agricultural businesses and not-for-profit organizations; foreign SMEs), countries, object finance, acquisition financing, public-sector entities, and insurance companies.

Most of the other entities in the Bank sector use the DZ BANK rating systems for banks, countries, and large corporates. Rating systems for specific business segments are also used by individual subsidiaries.

#### Development and expansion of rating systems

All internal rating systems and those approved by the banking supervisor for solvency reporting were validated in the reporting year. In the first half of 2024, the new corporate customer rating system was introduced to replace the previous system for SMEs, agricultural businesses, and not-for-profit organizations. A substantially revised rating system for project finance was also implemented.

#### DZ BANK credit rating master scale

The credit rating master scale serves as a groupwide rating benchmark with which to standardize the different rating systems used by the entities in the Bank sector as a result of differences in their business priorities. It thereby provides all management units with a uniform view of counterparties' credit ratings.

Fig. VI.25 shows DZ BANK's credit rating master scale and matches the internal credit ratings to the ratings used by S&P Global Ratings, Moody's Ratings, and Fitch Ratings. Some internal ratings cannot be matched with a particular external rating because of the greater degree of refinement in the credit rating master scale. The ratings for securitization exposures are matched to various different external ratings depending on the asset class and region.

In DZ BANK's master scale, the default bands remain unchanged to ensure comparability over the course of time, whereas some fluctuation in default rates can be seen in external ratings. Therefore, it is not possible to map the internal ratings directly to the ratings used by the rating agencies. Consequently, the chart can only be used as a starting point for comparison between internal and external credit ratings.

#### DZ BANK rating desk

The VR rating systems for banks and countries are also available to DZ BANK subsidiaries and the cooperative banks. Users can enter into a master agreement to access the ratings via an IT application (Rating Desk), which is available throughout the Cooperative Financial Network, in return for the payment of a fee. Any accessed ratings are first validated by the entities in the Bank sector or the cooperative banks before they are included in the user's credit procedures.

FIG. VI.25 – BANK SECTOR: DZ BANK'S VR CREDIT RATING MASTER SCALE AND EXTERNAL CREDIT RATINGS

| Internal rating class | Average default probability                                                                                                                     | External rating classes |                    |               | Rating category      |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|--------------------|---------------|----------------------|
|                       |                                                                                                                                                 | Moody's Ratings         | S&P Global Ratings | Fitch Ratings |                      |
| 1A                    | 0.01%                                                                                                                                           | Aaa to Aa2              | AAA to AA          | AAA to AA     | Investment grade     |
| 1B                    | 0.02%                                                                                                                                           | Aa3                     | AA-                | AA-           |                      |
| 1C                    | 0.03%                                                                                                                                           |                         |                    |               |                      |
| 1D                    | 0.04%                                                                                                                                           | A1                      | A+                 | A+            |                      |

| 5A                    | DPD default                                                                                                                                     |                         |                    |               | Default              |
| 5B                    | Specific loan loss allowance / internal neutralization of interest / rating-related sale with significant loss / further bank-internal criteria |                         |                    |               |                      |
| 5C                    | Distressed restructuring                                                                                                                        |                         |                    |               |                      |
| 5D                    | Insolvency                                                                                                                                      |                         |                    |               |                      |
| 5E                    | Direct impairment / workout                                                                                                                     |                         |                    |               |                      |
| NR                    | Not rated                                                                                                                                       |                         |                    |               |                      |

### 8.5.2 Management of exposure in traditional lending business

#### Measuring exposure in traditional lending business

Individual lending exposures are managed on the basis of an analysis of gross lending exposure. The period taken into account in this case is equivalent to the monitoring cycle of 1 year. Together with risk-related credit-portfolio management, volume-oriented credit risk management is one of the components in the management of risk concentrations in the lending business.

In traditional lending business, the credit exposure or lending volume is generally the same as the nominal value of the total loan book and reflects the maximum volume at risk of default. The credit exposure is a gross value because risk-bearing financial instruments are measured before the application of any credit risk mitigation and before the recognition of any loss allowances. The maximum credit exposure comprises the total lines of credit committed to third parties, or in the case of limit overruns, the higher amounts already drawn.

In building society operations, nominal amounts are used as a basis for measuring the lending volume. In addition, loans and advances to customers in building society operations are reduced by the associated deposits.

Limit system for managing exposures in traditional lending business

**Limits** are set in the relevant entities in the Bank sector for individual borrowers and groups of connected customers. Counterparties are also managed centrally at the level of the Bank sector, depending on the limit level and credit rating.

As a prerequisite for prompt monitoring of limits, suitable **early-warning processes** have been established in the management units that are of material significance for the Bank sector's credit risk. In this context, financial covenants are often incorporated into loan agreements to act as early-warning indicators for changes in credit standing and as a risk management tool for lending exposures.

In addition, processes have been set up in the Bank sector to handle instances in which limits are **exceeded**. Such excess exposures must be approved by the relevant level of authority in the management units concerned and in accordance with applicable internal requirements; measures to reduce them must also be initiated if necessary.

Country exposure in the traditional lending business is managed by setting **country limits** for industrialized countries and emerging markets at the Bank sector level.

### 8.5.3 Management of credit exposure in trading transactions

Measuring credit exposure in trading transactions

Issuer risk, replacement risk, and settlement risk are exposure-based measurements of the potential loss in trading transactions. These are determined without taking into account the likelihood of a default. In order to determine the credit exposure, securities in the banking book and trading book are predominantly measured at fair value, while derivatives are measured at fair value and, in respect of settlement risk, at the cash-flow-based accepted value.

The fair value of a securities exposure is used to determine the **issuer risk**. Risks relating to the underlying instruments in derivative transactions are also included in issuer risk.

At the level of the Bank sector, **replacement risk** is generally determined on the basis of fair value, taking into account appropriate add-ons. At **DZ BANK**, which is of particular significance as far as replacement risk is concerned, these add-ons are determined primarily according to each individual transaction as part of a portfolio simulation. The portfolio simulation models future exposures, taking into account a large number of risk factors. The add-ons for the remaining derivatives not included in the portfolio simulation are determined on the basis of a product-specific allocation, which also takes into account specific risk factors and residual maturities. Transaction processing risk is additionally factored into the exposure calculation for replacement risk. This risk is largely determined as the net present value of the reciprocally required performance.

With regard to exchange-traded derivatives, the replacement risk vis-à-vis the customer in customer brokerage business consists of the actual collateral exchanged (the variation margin for the daily settlement of profits and losses, and the initial margin as the collateral to be provided in advance to cover the loss risk), the fair value, and additional collateral requirements. To calculate the replacement risk vis-à-vis stock exchanges, additional potential for changes in value or add-ons for individual transactions are also taken into consideration. Where legally enforceable, netting agreements and collateral agreements are used at counterparty level for all derivatives in order to reduce exposure. In the case of repos and securities lending transactions, haircuts are applied instead of add-ons. Unsecured money market transactions are measured at fair value.

As regards **settlement risk**, the risk amount is the expected payment due. Settlement risk is recognized for the specified settlement period. It takes into account the amount and timing of outstanding cash flows for the purposes of managing the risk associated with settlement by the two parties at points of time in the future. These future cash flows are already factored into the replacement risk through the fair value measurement and

are therefore included in the risk capital requirement. As a result, settlement risk does not need to be covered with risk capital in addition to that for the other types of credit risk related to trading activities.

#### Limit system for managing trading exposure

DZ BANK has established an exposure-oriented **limit system** related to credit ratings to limit the default risk arising from trading business. Replacement risk is managed via a structure of limits broken down into maturity bands. Unsecured money market transactions are subject to separate limits. The transaction processing risk forming part of the replacement risk is included in the shortest maturity band. A daily limit is set in order to manage settlement risk. A specific limit for each issuer or, in certain circumstances, a general limit is determined as the basis for managing issuer risk. The specific limit can also be broken down into seniority bands; in the case of asset-backed securities, the specific limit can be broken down into rating bands. Issuer risk relating to cover assets is subject to separate limits, as are settlement risk and replacement risk attaching to cover assets. Issuer risk in connection with the trading book and issuer risk in connection with the banking book are subject to separate limits. The material subsidiaries have their own comparable limit systems.

The standardized methodology for measuring and monitoring trading exposure at DZ BANK (**pre- and post-transaction control**) is included in an IT-supported limit monitoring system, to which all relevant trading systems are directly or indirectly connected. Furthermore, the trading exposure in the Bank sector is managed on a decentralized basis at management unit level.

As in the traditional lending business, processes have also been established in the trading business to provide **early warnings and notification of limit overruns** and for daily and monthly reporting. The material subsidiaries have their own comparable processes.

Country exposure in the trading business is managed in the same way as in the traditional lending business by setting **limits for countries** at the Bank sector level.

### 8.5.4 Management of risk concentrations and correlation risks

#### Identifying risk concentrations

One of the Bank sector's key concerns in the management of credit risk is to avoid undesirable concentrations and correlations of risks in the credit portfolio. To this end, it has established credit risk strategies, policies, and principles that must be applied in the various areas of business. The main structural elements are managed on this basis with the aim of ensuring that the credit portfolio is appropriately diversified. The structural elements include specifications for rating-related maximum exposures, strategic borrower limits, restriction of areas of business to specified countries or regions, maturity limits, specific requirements for certain operating segments and industries, and requirements relating to collateral, loan agreement clauses, and key credit-risk-related figures.

#### Measurement and monitoring of risk concentrations

The structural requirements include general parameters to ensure that the credit portfolio in the Bank sector is comprehensively diversified. They therefore provide important guidance for managing new business. The ongoing monitoring of potential risk concentrations is also of fundamental importance. With this in mind, the Bank sector's credit portfolio is constantly checked for concentrations in terms of asset class, area of business, industry, country, country group, residual maturity, size category, and rating class. Significant attention is also paid to monitoring concentrations linked to individual borrowers. Exposures are analyzed and managed using monitoring lists, particularly to identify if specified volume limits are exceeded.

Besides volume-oriented parameters, the credit value-at-risk for individual borrowers and groups of connected customers is a core parameter used in modeling concentration risk. A key factor is the possibility of a simultaneous default by a number of borrowers who share the same characteristics. This is why determining the correlated exposure to loss as a part of the calculation of the risk capital required for credit risk is essential for managing risk concentrations.

#### Risk concentrations in credit and collateral portfolios

In managing the traditional lending business and its trading business, DZ BANK takes into account the correlation between collateral and the borrower pledging the collateral or between the collateral and the counterparty whose replacement risk the collateral is intended to mitigate. If there is a significant positive correlation between the collateral and the borrower or the counterparty pledging the collateral, the collateral is disregarded or accorded a reduced value as collateral. This situation arises, for example, where a protection provider, garnishee, or issuer forms a group of connected clients or a similar economic entity with the borrower or counterparty.

#### Wrong-way risk in trading activities

**General wrong-way risk** can arise as a result of DZ BANK's trading activities. This is defined as the risk of a positive correlation between the default probability of a counterparty and the replacement value (replacement risk exposure) of a (hedging) transaction entered into with this counterparty because of a change in the macroeconomic market factors of the traded underlying instrument (e.g. price changes for exchange rates).

**Specific wrong-way risk** can also occur. This is the risk of a positive correlation between the default probability of a counterparty and the replacement value (replacement risk exposure) of a (hedging) transaction entered into with this counterparty because of an increase in the default probability of the issuer of the traded underlying instrument. This type of risk largely arises in connection with OTC equity and credit derivatives in which the underlying instrument is a (reference) security or (reference) issuer.

#### Other measures to prevent concentration risk and wrong-way risk in trading activities

In order to prevent unwanted risks that may arise from the concentration or correlation of collateral in the trading business or from general wrong-way risk, DZ BANK has brought into force a **collateral policy** and its own internal **minimum requirements for bilateral reverse repo transactions and securities lending transactions**. Both policies are explained in chapter VI.658.5.5.

If material specific wrong-way risk arises in connection with a bilateral OTC trading transaction, it is taken into account when the exposure is calculated.

Through the **monthly trading business report**, DZ BANK's **Risk Committee** is informed about relevant wrong-way risk and concentration risk arising in connection with derivatives and securities financing, including any necessary exposure adjustments.

### 8.5.5 Mitigating credit risk

#### Collateral strategy and secured transactions

In accordance with the credit risk strategy, customer credit quality forms the main basis for any lending decision; collateral has no bearing on the borrower's credit rating. However, depending on the structure of the transaction, collateral may be of material significance in the **assessment of risk** in a transaction. In particular, collateral received reduces the credit value-at-risk (see chapter VI.8.5.8).

Collateral in line with the level of risk is generally sought where the rating category is 3B or below on the credit rating master scale and in medium-term or long-term financing arrangements. In addition, recoverable collateral equivalent to 50.0 percent of the finance volume is expected in the joint credit business with the local cooperative banks for new business entered into with SME customers in rating category 3E on the credit rating master scale.

Collateral is used as an appropriate tool for the management of risk in export finance or structured trade finance transactions. In the case of project finance, the financed project itself or the assignment of the rights in the underlying agreements typically serve as collateral.

**Secured transactions** in traditional lending business encompass commercial lending including financial guarantee contracts and loan commitments. In order to limit defaults in these transactions, a decision on whether to obtain traditional collateral is made on a case-by-case basis.

#### Types of collateral

The entities in the Bank sector use all forms of **traditional loan collateral**. Specifically, these include mortgages on residential and commercial real estate, registered ship and aircraft mortgages, guarantees (including sureties, credit insurance, and letters of comfort), financial security (certain fixed-income securities, shares, and investment fund units), assigned receivables (blanket and individual assignments of trade receivables), and physical collateral.

Privileged mortgages, guarantees, and financial collateral are the main sources of collateral recognized for regulatory purposes under the CRR.

In accordance with DZ BANK's collateral policy, only cash, investment-grade government bonds, and/or Pfandbriefe are normally accepted as **collateral for trading transactions** required by the collateral agreements used to mitigate the risk attaching to OTC derivatives. Entities in the Bank sector also enter into netting agreements to reduce the credit risk arising in connection with OTC derivatives. The prompt evaluation of collateral within the agreed margining period also helps to limit risk.

Credit derivatives, such as credit default swaps, are used to reduce the issuer risk arising on bonds and derivatives. Macro hedges are used dynamically to mitigate spread risk and migration risk as well as risks attaching to underlying assets. In isolated cases, transactions are conducted on a back-to-back basis. For risk management purposes, the protection provided by credit derivatives is set against the reference entity risk, thereby mitigating it. The protection providers/counterparties in credit derivatives are financial institutions, namely investment-grade banks and funds in the VR rating classes 1A to 2E.

#### Management of traditional loan collateral

Collateral management is the responsibility mainly of **specialist units**, generally outside the front-office divisions. The core tasks of these units include providing, inspecting, measuring, recording, and managing collateral and providing advice to all divisions in related matters.

To a large extent, standardized contracts are used for the provision of collateral and the associated declarations. Specialist departments are consulted in cases where customized collateral agreements are required. Collateral is managed in separate IT systems.

Collateral **is measured** in accordance with internal guidelines and is usually the responsibility of back-office units. As a minimum, carrying amounts are normally monitored annually or on the agreed submission date for documents relevant to measurement of the collateral. Shorter monitoring intervals may be specified for critical lending exposures. Regardless of the specified intervals, collateral is tested for impairment without delay if any indications of impairment become evident.

The workout units are responsible for **recovering collateral**. In the case of non-performing loans, it is possible to depart from the general measurement guidelines and measure collateral on the basis of its likely recoverable value and time of recovery. Contrary to the general collateralization criteria, collateral involved in restructuring exposures can be measured using market values or the estimated liquidation proceeds.

#### Collateral management

In addition to **netting agreements** (ISDA Master Agreement and German Master Agreement for Financial Futures), both collateral agreements for variation margin (Credit Support Annex to the ISDA Master Agreement and Collateralization Annex to the German Master Agreement for Financial Futures) and collateral agreements for initial margin are entered into as instruments to reduce credit exposure in OTC transactions.

DZ BANK's **collateral policy** regulates the economic aspects of collateral agreements and the responsibilities and authorization levels. This policy specifies contractual parameters, such as the type and quality of collateral, minimum transfer amounts, and delivery deadlines as permitted by regulatory requirements. As a rule, the collateral policy permits only collateral in the form of cash (in euros) to be accepted for mitigating risks arising from OTC derivatives on the basis of the Credit Support Annex or the German Collateralization Annex. General

exceptions to this rule exist for older contracts entered into before the collateral agreement obligation came into force and, in particular, for contracts with local cooperative banks that permit thresholds and securities collateral. Securities collateral must be eligible as collateral with the ECB and have a minimum credit rating of A3 (Moody's Ratings) or A- (S&P Global Ratings, Fitch Ratings). Exceptions to the standard conditions are approved on the basis of the authorization levels specified in the collateral policy.

High-grade collateral is also required for repo and securities lending transactions in compliance with generally accepted master agreements and DZ BANK's own internal **minimum requirements for bilateral reverse repo transactions and securities lending transactions**, although the range of collateral is somewhat broader here than in the case of OTC derivatives. There are a few individual exceptions for banks in the Cooperative Financial Network. Furthermore, the minimum requirements applicable at DZ BANK exclude prohibited correlations and specify collateral quality depending on the credit rating of the counterparties.

DZ BANK regularly uses **bilateral collateral agreements**. Exceptions apply to cover assets and special-purpose entities, as the special legal status of the counterparties means that only unilateral collateral agreements can be usefully enforced, and to supranational or government entities. Any decision not to use a bilateral collateral agreement for counterparties not subject to the European Market Infrastructure Regulation (EMIR) rules must be approved by a person with the relevant authority.

Netting and collateralization generally result in a significant reduction in the exposure from trading business. IT systems are used to measure exposures and collateral. **Margining** is carried out on a daily basis for the vast majority of collateral agreements in accordance with the collateral policy requirements.

Collateral agreements generally include minimum transfer amounts and, in some cases, also **thresholds** that are independent of the credit rating. There are also some agreements with triggers based on the credit rating. In these agreements, for example, the unsecured part of an exposure is reduced in the event of a ratings downgrade or the borrower is required to make additional payments (for example, payments known as 'independent amounts'). The supervisory authorities have specified these contractual provisions as standard for EMIR-compliant agreements.

EMIR requires the exchange of an initial margin in bilateral OTC derivatives transactions in addition to the variation margin. The transfer of initial margin takes account of counterparty-specific thresholds.

#### Other risk mitigation methods

Under EMIR, market players must report and promptly confirm all exchange-traded and OTC derivatives to central trade repositories. The regulation also requires a daily portfolio reconciliation of transactions for which the bilateral variation margin is exchanged.

#### Central counterparties

Under EMIR, market players must also use predefined steps to settle certain standardized OTC derivatives via central counterparties (known as clearing houses). Furthermore, risk mitigation methods have to be used for OTC derivatives that are not settled centrally through a clearing house. This is intended to minimize counterparty risk.

Any market players not exempted from this clearing obligation must be connected to a central counterparty. The market player concerned may be a direct member of a clearing house or may process its derivative contracts using a bank that is a clearing member of a central counterparty.

DZ BANK is a direct member of London Clearing House Ltd, London, (LCH Ltd), which is Europe's largest clearing house for interest-rate derivatives, and of Eurex Clearing AG, Eschborn. DZ BANK therefore has direct access to central counterparties for derivatives for the purposes of clearing derivative transactions. In the case of credit derivatives, it also has indirect access to London Clearing House S.A., Paris, (LCH S.A) via clearing broker Deutsche Bank AG, Frankfurt am Main.

As a direct member, DZ BANK is connected to LCH S.A. and LCH Ltd for the purpose of clearing repos. Derivatives on foreign exchanges are settled through UBS Group AG, Zurich.

#### 8.5.6 Management of closely monitored and non-performing lending exposures

The following descriptions apply to **DZ BANK**. Where required, similar procedures have been implemented in the subsidiaries that have a material traditional lending business (**BSH**, **DZ HYP**, and **TeamBank**), which adapt them to the characteristics of the risks faced in their particular business.

##### Management and monitoring

Early identification of risk is a key component of the management and monitoring of traditional lending business. The system for identifying risk at an early stage is designed to detect emerging risks at the earliest opportunity and return the affected lending exposures to acceptable levels of risk quality. Another objective is to minimize losses from loan defaults.

In order to identify risk at an early stage, criteria are defined as early-warning indicators that should show when exposures must become subject to special, closer monitoring (intensified loan management) and when lending exposures must be transferred to the specialist units responsible for loan restructuring and workout.

The following lists are maintained to closely monitor lending exposures that are subject to intensified management and lending exposures that are in default:

- The **yellow list** for exposures with latent risk
- The **watchlist** for exposures with heightened risk
- The **default list** for exposures with acute risk (exposures that are classified as in default and thus non-performing)

Borrowers are classified as in default and thus **non-performing** either if a material portion of their overall obligation under the loan agreement is past due by more than 90 consecutive calendar days or if it is unlikely that they will meet their payment obligations under the loan agreement in full without the management unit in the Bank sector that granted the loan having recourse to actions such as the recovery of any available collateral. This corresponds to the definition of default specified by the CRR. Borrowers in default are assigned a rating of between 5A and 5E on the VR credit rating master scale.

Non-performing loan exposures are also referred to by the abbreviation NPL. They are monitored using the following key figures:

- **Coverage ratio** (specific loan loss allowances plus collateral as a proportion of the volume of non-performing loans)
- **NPL ratio** (volume of non-performing loans as a proportion of total lending volume)

**Workout units** become involved at an early stage of identified difficulties. By providing intensified loan management for critical exposures and applying problem-solving strategies, these special units aim to establish the basis for securing and optimizing exposures with heightened risk.

Exposures with heightened risk are generally reviewed, updated, and reported on a quarterly basis. The process is also carried out at shorter intervals if required. This process is supported by IT systems.

##### Forbearance

Forbearance is a tool for managing non-performing exposures or those close to non-performing. Forbearance measures include **concessions** regarding the obligations under a loan agreement of a borrower in financial difficulties. Such concessions may consist of **contractual modifications**, such as adjustments to covenants or changes to the interest rate, repayment structure, or loan maturity. They may also amount to **refinancing measures**, such as debt-equity swaps, further loan facilities, turnaround or bridging financing, or debt restructuring. The aim of such concessions is to ensure that borrowers who cannot satisfy the terms and

conditions of their loan agreements because of their financial circumstances are placed in a position whereby they can repay the loans granted by DZ BANK.

Concessions qualify as forbearance measures if a borrower is found to meet one of the following **criteria** during the monitoring of credit risk:

- The borrower is included in the default list, watchlist, or yellow list with a rating of 4A.
- The borrower is classified with a rating of 4B or worse, regardless of whether the borrower is on one of the lists or not.
- Payments are past due by more than 30 days within a period of 3 months prior to the concession.

The borrower must satisfy all of the following criteria before **exiting forbearance status**:

- The borrower is classified as performing.
- The borrower has undergone a probation period of at least two years. In the case of borrowers who have recovered from a default, the probation period begins with their reclassification as 'recovered'. Borrowers not previously in default begin the probation period when forbearance measures are initiated.
- The borrower has made regular interest payments or repayments of principal during at least half of the probation period.
- No payments are past due by more than 30 days.

#### Recognition of loss allowances

The description required by GAS 20 A1.7(c) of the methods used for recognizing loss allowances is included in note 5 of the notes to the consolidated financial statements.

#### 8.5.7 Credit-portfolio management

**Internal credit-portfolio models** operated on a decentralized basis in the material management units are used together with value-at-risk methods to quantify unexpected losses from lending and trading business. The **credit value-at-risk** reduced by the expected loss is referred to as the risk capital requirement for transactions subject to credit risk. Credit value-at-risk is calculated on the basis of a holding period of 1 year and a confidence level of 99.9 percent. The risk capital requirement quantifies the risk of unexpected losses if default or migration events were to materialize.

**Expected loss** is calculated by multiplying the exposure at default (EAD) by the loss given default (LGD) and by the probability of default (PD). **Exposure at default** equates to the expected outstanding loan or receivable or the potential economic loss in respect of a counterparty if the counterparty defaults, without taking into account any collateral. **Loss given default** refers to the expected percentage loss on default of a borrower, whereby the loss is reduced by any proceeds anticipated from the recovery of **collateral**. **Probability of default** is the probability, calculated on the basis of historical data, that a borrower will not be able to meet their payment obligations within a particular, future period. For the purposes of credit-portfolio management in the Bank sector, this period is 1 year. The probability of default reflects the borrower's current rating and, in individual cases, also takes into account business-specific factors.

When determining credit value-at-risk, **recovery risk** is taken into account as the amount by which the actual loss deviates from the expected recovery rate or – in the case of transactions already in default – from the specific loan loss allowances. Existing netting agreements are included in the measurement of trading exposures subject to default risk.

The credit value-at-risk amounts determined for the management units are aggregated by DZ BANK at **Bank sector** level.

For the purposes of **managing** the credit portfolio, the credit value-at-risk and the decentralized capital buffer requirement are restricted by the **credit risk limit**. The calculation of the decentralized capital buffer requirement is explained in chapter VI.4.5.2. A **traffic light system** is used to monitor Bank sector management units' compliance with the limits specified for credit risk.

## 8.6 Managing sustainability risks in the lending business

### 8.6.1 Principles of sustainability risk management in the lending business

The **group credit standard** on the consideration of risks associated with ESG factors in the DZ BANK Group provides guidelines for the lending business on sustainable lending in the Bank sector. The document contains exclusion criteria that prohibit lending that does not satisfy the minimum ESG requirements or entails heightened greater reputational risk. The sustainability assessment considers positive criteria and ascertains that the funding has a sustainability-oriented focus. In addition, the group credit standard includes a definition of sustainability risks and a description of how these should be addressed in the business activities, especially in the granting and monitoring of loans and the valuation of collateral.

The rules on taking account of sustainability matters in **lending processes** encompass processes for the extension of loans, the monitoring of loans, and the valuation of collateral. Sustainability matters are also taken into account in regular and ad hoc credit control. The rules are continually refined. Employees working in front-office divisions and credit analysis are kept up to date and trained on any changes.

Before a detailed sustainability-related credit check is carried out, funding projects are checked as to whether **exclusion criteria** apply and whether **sector criteria** are satisfied. If the findings of the check are negative, the funding project is not pursued further.

DZ BANK has committed to the 10 universally accepted principles of responsible conduct in relation to human rights, labor standards, environmental protection, and the fight against corruption set forth in the **United Nations Global Compact** and it observes these principles when considering funding projects. It has also undertaken to comply with other voluntary frameworks, such as the **Equator Principles** – a voluntary set of guidelines adopted by banks to ensure compliance with environmental and social standards in project finance – and the **International Finance Corporation (IFC) Performance Standards**. The above standards are operationalized using the exclusion criteria, the sector criteria, and an ESG checklist.

The **ad hoc exclusion criteria committee** supports DZ BANK in the interpretation of exclusion criteria and sector criteria in its lending decisions. Its members are points of contact for the Credit, Corporate Banking, Structured Finance, and Strategy & Group Development divisions and meet weekly.

### 8.6.2 Exclusion criteria and sector criteria

The entities in the Bank sector have developed sector-specific **exclusion criteria** for lending activities in order to prohibit lending that does not satisfy the minimum ESG requirements or entails heightened reputational risk. The exclusion criteria are reviewed on an ongoing basis, and adapted and expanded as necessary. The current principles applicable to the Bank sector are very similar to DZ BANK's exclusion criteria.

DZ BANK's exclusion criteria primarily relate to the following activities and types of business:

- Oil extraction activities (upstream) and oil/gas extraction that involves fracking, oil shale/oil sands, Arctic drilling, or deep sea mining
- Activities connected with the construction, operation, or maintenance of nuclear power stations
- Trading of endangered animal or plant species
- Significant threats to the environment, particularly uranium/asbestos extraction, mining activities involving the mountain-top removal method, and projects, assets, or activities that pose a high risk of nuclear, biological, or chemical contamination (excluding biogas facilities), or hazardous goods with insufficient measures to minimize risk

A borrower's corporate governance can also pose a risk in the course of lending business. Indications of such risk include suspected corruption, tax evasion proceedings, and ongoing antitrust proceedings. In these cases, the risk lies in the potentially negative effects of judicial proceedings on the borrower's reputation, which could lead to declining revenue and a reduction in earnings power. The lending and loan monitoring process is designed to ensure that transactions with customers that do not satisfy the minimum corporate governance requirements

defined by the DZ BANK Group are prohibited. Checks for critical corporate governance aspects relating to anti-corruption, competition, and tax are conducted and evaluated in a standardized manner prior to lending.

DZ BANK applies further sector-specific requirements – **sector criteria** – for certain industries that are particularly vulnerable from a sustainability perspective. These criteria specify the details to be reviewed with reference to international industry-specific conventions, recognized standards and certification, and optimum production processes.

The sector criteria mainly focus on the following aspects:

- Dams and water infrastructure
- Commodities industry
- Agriculture
- Forestry
- Fishing
- Maritime industry
- Palm oil

#### 8.6.3 ESG checklists

Factors of relevance to the financing arrangement in question are systematically assessed and documented in relation to social, ethical, and environmental risks using **ESG checklists**, which are based on the 10 principles of the UN Global Compact. Various asset-class-specific ESG checklists exist for corporates, finance companies, and countries as well as for project finance. The ESG checklist for project finance looks at whether the Equator Principles are applied. The corporates ESG checklist used by DZ BANK and DZ HYP forms the basis for all other ESG checklists, which differ from the corporates checklist in that they only include questions that are relevant to the specific asset class.

The ESG checklists are intended to help to gauge the sustainability efforts of a customer or the sponsor of a funding project and to determine the funding's reputational impact on DZ BANK. They contain up to 16 questions that examine the environmental, social, and corporate governance dimensions and analyze the customer's / project sponsor's general engagement with sustainability. The ESG checklists also enable possible negative environmental impacts of a funding project (such as air pollution and water shortages), including on biodiversity, to be identified. As a rule, the ESG checklists are initially filled in for each counterparty to the application by front-office employees and are then checked by credit analysis employees.

The findings of the sustainability assessment are depicted on a four-level scale that ranges from neutral/green (neutral impact on DZ BANK's reputation) to high/red (strong negative impact on DZ BANK's reputation). Loan applications with an elevated or strong ESG-related negative reputational impact require approval at a higher authorization level.

#### 8.6.4 ESG credit risk score and pricing

Since 2023, DZ BANK has used the **ESG credit risk score** to assess the effects of sustainability matters on DZ BANK customers' credit risk. This score supplements the internal credit rating for corporate customers by providing an additional statement on the probability and scope of a potential future change in creditworthiness due to sustainability matters for a medium-term time horizon (5 to 10 years). The process provides a cross-sectoral statement on creditworthiness. This means that two corporate customers that operate in different sectors but have the same ESG credit risk score can be affected to a similar degree, irrespective of how their respective sector is affected by ESG risk.

The underlying methodology of the ESG credit risk score is based on relative revenue intensity, which is calculated, for example, as the absolute greenhouse gas emissions of a counterparty relative to the entity's revenue. In addition to internally available revenue data, data from external sources is also used.

The ESG credit risk score encompasses physical environmental risks and transition risks, social risks, and corporate governance risks, providing a separate subscore for each risk type. The individual results for the different risk types within the ESG credit risk score have five possible risk levels, ranging from A (very low risk) to E (very high risk).

Particularly in the case of transition risks, statutory measures such as a ban on internal combustion engines will lead to credit rating downgrades and potentially even loan defaults if companies fail to transform in the ESG sphere. However, such effects will materialize only in the medium term. Poor ESG credit risk scores are therefore mainly significant for long-term loan agreements and less so for short-term lending. The greenhouse gases associated with a financing arrangement are critical in determining transition risk. In 2024, this information was only publicly available from companies that were subject to statutory ESG disclosure requirements. Greenhouse gas emissions were therefore not available for all of DZ BANK's borrowers. Average industry figures were used in these cases.

The ESG credit risk score is factored into **pricing** for lending business with corporate customers by adding an ESG markup factor to the standard risk costs for corporates in pre- and ex-post analysis of loans. Changes in the probability of default for a customer (known as a PD shift) are determined in a two-step process. In the first step, the average anticipated markups for the corporate portfolio are calculated using the simulation results from the climate scenarios devised by the Network for Greening the Financial System (NGFS) and from the NGFS baseline scenario. In a second step, these average markups are used to define customer-specific markups, taking the customers' individual ESG credit risk scores into account. The level of the customer-specific markup depends on the customer's individual score. In line with the observation period for the ESG credit risks, the markups are only applied to business with a term of more than 5 years. This process applies both to new business and to extensions.

#### 8.6.5 Sustainability-related valuation of collateral

The sustainability-related valuation of collateral has been integrated in DZ BANK's general collateral valuation process. DZ BANK checks and documents relevant sustainability matters that could negatively affect the value of collateral in the first valuation and any subsequent valuation of collateral. The main types of collateral concerned are real estate and immovable collateral (machinery, equipment, inventories). On the one hand, the recoverability of such collateral may be jeopardized by physical climate-related and environmental risks, such as flooding or heavy rain. On the other hand, these types of collateral may themselves have an adverse impact on the climate or environment, for example due to harmful emissions or consumption of energy and other resources. In turn, this may have a negative or positive (e.g. where a building is exceptionally energy-efficient) effect on market value and thus on the value of the collateral.

If elevated physical climate-related and environmental risks are identified for collateral, DZ BANK checks whether any mitigation measures – such as sufficient insurance cover for identified risks or construction work following a property inspection – need to be requested. If any uncertainty remains as to whether the risk has been reasonably mitigated, the organizational unit responsible for handling collateral reduces the valuation by an adequate amount.

The real estate finance providers in the Bank sector largely classify collateral risk at asset level. At **BSH**, physical and transition risks in the existing credit portfolio are regularly monitored, in particular because properties with poor energy efficiency are exposed to heightened transition risk, for example due to statutory requirements regarding building renovation. In recent years, **DZ HYP** has developed a scorecard for measuring physical and transition risks, the results of which are considered in lending decisions.

The mortgageable value of a property is based on the long-term and sustainability-related characteristics of that property. **BSH** and **DZ HYP** take into account all circumstances that affect this value. Identifiable sustainability risks that may arise due to the property's characteristics or location are also factored into the valuation, such as risks resulting from flooding or poor energy efficiency.

#### 8.6.6 Overall assessment of a loan application from a sustainability perspective

The findings from application of all of the ESG tools (check against exclusion criteria and sector criteria, ESG checklist, ESG credit risk score) are factored into the separate **ESG vote** within the loan application process. The aim is to provide decision-makers with an overview of the customer's ESG aspects so that they can be taken into account in the lending decision.

### 8.7 Lending volume in the entire credit portfolio

#### 8.7.1 Definition of lending volume

One of the ways in which credit risk is managed is on the basis of the lending volume. In the **traditional lending business**, the lending volume is no more than the total amount of loans already drawn down, plus commitments to third parties. In the **trading business** (securities business, together with derivatives business and money market business), the lending volume largely equates to the exposure at default.

Business with **central banks** of EU countries, the Bank of England, the Swiss National Bank, and the Federal Reserve Board that is denominated in the currency of the relevant central bank is not included in the determination of the risk capital requirement or in the presentation of the credit portfolio.

#### 8.7.2 Reconciliation of lending volume to the consolidated financial statements

To reconcile the lending volume managed at Bank sector level with the lending volume reported on the balance sheet, the volume is broken down by traditional lending business, securities business, derivatives business, and money market business, because this breakdown corresponds to the classes of risks from financial instruments used for external reporting purposes.

Fig. VI.26 shows a reconciliation of the gross lending volume on which the risk management is based to individual balance sheet items in order to provide a transparent illustration of the link between the consolidated financial statements and risk management.

For some financial instruments, there are discrepancies in **recognition** and **measurement** between the internal management and external consolidated financial reporting figures owing to the focus on the risk content of the items.

Another reason for the discrepancies between the internal management figures and those in the external consolidated financial statements are differences in the **scope of consolidation**. These differences result from the fact that, in internal credit risk management, only the entities in the Bank sector that contribute significantly to the aggregate risk of the sector are included, whereas, in the consolidated financial statements, all entities subject to consolidation in the Bank sector are included.

The discrepancy in the **securities business** is mainly due to the variations in carrying amounts that arise because credit derivatives are offset against the issuer risk attaching to the underlying transaction in the internal management accounts, whereas such derivatives are recognized at their fair value as financial assets or financial liabilities held for trading in the consolidated financial statements.

The differences between the measurements in the **derivatives business** and those in the **money market business** arise because of differences in the treatment of offsetting items in internal risk management and in external financial reporting. Offsetting items are actually netted for the purposes of risk management, whereas netting of this nature is not permitted in the consolidated financial statements. In addition, add-ons are attached to the current fair values of derivative positions in the internal management accounts to take account of potential future changes in their fair value. By contrast, the external (consolidated) financial statements focus exclusively on the fair values determined on the valuation date, and, unlike in the internal accounts, collateral must not be recognized for risk mitigation purposes.

**In money market business**, further discrepancies arise between the consolidated financial statements and internal risk management due to the method used for the recognition of repo transactions. In contrast to the treatment in the consolidated financial statements, securities provided or received as collateral are offset against the corresponding assets or liabilities for the purposes of the internal analysis.

### 8.7.3 Asset class structure of the credit portfolio

The reporting to the Board of Managing Directors on concentrations of credit risk includes a presentation of the credit portfolio broken down by asset class. This is done by dividing the credit portfolio into business-related homogeneous segments on the basis of characteristics such as industry code to reflect the sector, product type, and the rating system used to determine the credit rating. The characteristics are selected in such a way that the segments are subject to uniform risk factors.

In its role as central institution for the Cooperative Financial Network, DZ BANK provides funding for the entities in the Bank sector and for the cooperative banks. For this reason, the cooperative banks, which are assigned to the asset class **entities within the Cooperative Financial Network**, account for one of the largest loans and receivables items in the group's credit portfolio.

DZ BANK also supports the cooperative banks in the provision of larger-scale funding to corporate customers. Corporate banking exposures relate to business with commercial customers, which is assigned mainly to the 'corporates' asset class and the 'asset-based lending / project finance' asset class. The syndicated business resulting from the corporate customer lending business, the direct business of DZ BANK, the real estate lending business of DZ HYP and BSH, and DZ HYP's local authority lending business determine the asset-class breakdown for the remainder of the portfolio.

The total lending volume of the **Bank sector** increased by 3 percent in the year under review, from €471.0 billion as at December 31, 2023 to €486.1 billion as at December 31, 2024. The rise in the lending volume was mainly due to an increase in volume in the 'public sector' asset class, which went up by €9.2 billion compared with the end of 2023. DZ BANK made a particularly large contribution to this increase, which was driven by investments in bonds, especially bonds of the Federal Republic of Germany, the German federal states, and other European countries. The 'financials' asset class recorded an increase of €4.2 billion, while the 'corporates' asset class (Corporate Banking and Structured Finance) saw a rise of €3.6 billion. However, the lending volume in business with entities within the Cooperative Financial Network, especially development lending business, money market loans, and undrawn credit lines, decreased by €5.2 billion.

As at December 31, 2024, a significant proportion (40 percent) of the **Bank sector's** lending volume was concentrated in the financial sector (December 31, 2023: 41 percent). The financial sector comprises entities within the Cooperative Financial Network (cooperative banks) and the 'financials' asset class (mainly banks from other sectors of the banking industry and other financial institutions).

As at December 31, 2024, a significant proportion (59 percent) of **DZ BANK's** lending volume was also concentrated in the **entities within the Cooperative Financial Network** and **financials** asset classes (December 31, 2023: 62 percent). The composition of these asset classes is the same both at DZ BANK and in the Bank sector.

Fig. VI.27 shows the breakdown of the credit portfolio by asset class.

FIG. VI.26 – BANK SECTOR: RECONCILIATION OF THE LENDING VOLUME

| € billion                                       |               | Reconciliation         |               |                                 |               |               |       | Lending volume for the consolidated financial statements |               | Note                                                                                  |
|-------------------------------------------------|---------------|------------------------|---------------|---------------------------------|---------------|---------------|-------|----------------------------------------------------------|---------------|---------------------------------------------------------------------------------------|

<sup>1</sup> Cooperative banks.

<sup>2</sup> Including cooperatives for the purchase/sale of goods.

#### 8.7.4 Geographical structure of the credit portfolio (excluding Germany)

Fig. VI.28 shows the geographical distribution of the credit portfolio by country group. Borrowers based in Germany are not included in this breakdown. The relevant country for the assignment to a country group is the one in which the economic risk arises. As at December 31, 2024, 67 percent of the Bank sector's lending outside Germany and 62 percent of DZ BANK's lending outside Germany was concentrated in Europe. These figures were unchanged year on year.

FIG. VI.28 – BANK SECTOR: LENDING VOLUME, BY COUNTRY GROUP

#### 8.7.5 Rating structure of the credit portfolio

In the **Bank sector**, the proportion of the total lending volume accounted for by rating classes 1A to 3A (investment grade) was 88 percent as at the reporting date (December 31, 2023: 89 percent). Rating classes 3B to 4E (non-investment grade) represented 10 percent as at the reporting date, which was unchanged compared with the end of 2023. Defaults, represented by rating classes 5A to 5E, increased by €1.7 billion to €5.5 billion as at December 31, 2024 (December 31, 2023: €3.8 billion). They thus accounted for 1 percent of the total lending volume, as had also been the case at the end of 2023.

Rating classes 1A to 3A (investment grade) also dominated lending at **DZ BANK**, where they accounted for 91 percent of the total lending volume (December 31, 2023: 92 percent). Rating classes 3B to 4E (non-investment grade) represented 8 percent as at the reporting date (December 31, 2023: 7 percent). Defaults increased by €1.1 billion to €3.3 billion as at the reporting date (December 31, 2023: €2.2 billion), accounting for 1 percent of the total lending volume, as had also been the case at the end of 2023.

Fig. VI.29 shows the lending volume in the Bank sector and at DZ BANK by rating class according to the VR credit rating master scale.

#### 8.7.6 Collateralized lending volume

In the **traditional lending business**, the lending volume is a gross figure that has not been offset by collateral. The uncollateralized lending volume is defined as lending volume less the collateral received. In **derivatives and money market business**, where the lending volume already reflects the risk-mitigating effects of netting agreements and credit support annexes, collateral values are relatively low. In the **securities business**, there is generally no further collateralization to supplement the collateral already taken into account in the lending volume. For this reason, securities business is not included in the presentation of the collateralized lending volume.

Fig. VI.30 shows the breakdown of the collateral value by type of collateral.

FIG. VI.30 – BANK SECTOR: COLLATERAL VALUE, BY TYPE OF COLLATERAL

| € billion                                                       |  | Bank sector   |               | DZ BANK       |               |
|-----------------------------------------------------------------|--|---------------|---------------|---------------|---------------|
|                                                                 |  | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024 | Dec. 31, 2023 |
| Guarantees, indemnities, risk subparticipation                  |  | 6.9           | 7.0           | 2.0           | 1.7           |
| Credit insurance                                                |  | 6.6           | 6.0           | 6.6           | 6.0           |
| Land charges, mortgages, registered ship and aircraft mortgages |  | 113.3         | 114.1         | 1.8           | 1.9           |
| Pledged loans and advances, assignments, other pledged assets   |  | 1.8           | 2.0           | 1.0           | 1.2           |
| Financial collateral                                            |  | 2.5           | 1.4           | 0.4           | 0.4           |
| Other collateral                                                |  | 0.3           | 0.4           | 0.2           | 0.3           |
| <b>Total collateral</b>                                         |  | <b>131.4</b>  | <b>130.8</b>  | <b>12.0</b>   | <b>11.4</b>   |
| Lending volume                                                  |  | 402.2         | 400.3         | 248.3         | 246.3         |
| <b>Uncollateralized lending volume</b>                          |  | <b>270.8</b>  | <b>269.5</b>  | <b>236.3</b>  | <b>234.8</b>  |
| <b>Collateralization rate (percent)</b>                         |  | <b>32.7</b>   | <b>32.7</b>   | <b>4.8</b>    | <b>4.6</b>    |

Total collateral value in the **Bank sector** rose from €130.8 billion as at December 31, 2023 to €131.4 billion as at December 31, 2024. The collateralization rate as at the reporting date was 32.7 percent, as had also been the case at the end of 2023.

At €12.0 billion, **DZ BANK's** total collateral value as at December 31, 2024 was also up year on year (December 31, 2023: €11.4 billion). The collateralization rate had increased to 4.8 percent as at the reporting date (December 31, 2023: 4.6 percent).

### 8.8 Credit portfolios particularly affected by negative macroeconomic conditions

The following sections describe the lending volume of credit portfolios in which the effects of negative macroeconomic conditions were more noticeable than in the rest of the credit portfolios.

#### 8.8.1 Structural change in the automotive sector

The automotive sector has been undergoing a period of transformation for a number of years and faces certain challenges compared with other industries, such as low profit margins and a need for high levels of capital, coupled with long investment cycles. A major aspect of the transformation is the progressive switch from internal combustion engines to alternative drives, especially electric drives. In addition, new manufacturers – especially from China – have made headway in the field of electric vehicles, generating a high market share in their domestic markets while also starting to play a role in international markets. This brings German vehicle manufacturers, in particular, under pressure and has already triggered extensive cost-cutting programs. Long-term trends relating to digitalization, assistance systems, and autonomous driving are playing an ever greater role in the industry's transformation too. These developments are maintaining a very high level of pressure on the industry to transform.

The automotive industry recorded lackluster growth in the three major markets of Europe, North America, and China in 2024. Globally, the industry is also being adversely affected by geopolitical tensions, the tariffs that have already been imposed, and potential trade disputes. The outlook for 2025 remains muted. In the medium term, therefore, growth is expected to be weaker, especially for German and European vehicle manufacturers.

The volume of lending in DZ BANK's automotive finance portfolio came to €5.1 billion as at December 31, 2024 (December 31, 2023: €5.3 billion). This portfolio includes loans to automotive suppliers, which are analyzed separately in chapter VI.8.10.2.

#### 8.8.2 Commercial real estate finance

##### Business model and macroeconomic risks

**DZ HYP's** lending business with corporates includes financing for hotels, office real estate, department stores, shopping malls, and inner-city commercial properties that are mainly used for retail/wholesale businesses not offering day-to-day essentials (retail/wholesale segment). In addition, DZ HYP provides financing to property developers and project developers. It also finances purchases of land for which development plans have been drawn up.

Since 2020, these asset classes have been impacted by a number of general and specific sources of uncertainty. Prices and the number of transactions in the commercial real estate market stabilized in 2024, while rent prices generally rose across all types of property over the course of the year. Nevertheless, the commercial real estate finance segment continued to be affected by muted economic conditions, a rise in company insolvencies, and a difficult climate for businesses and consumers. Global political headwinds, and the related macroeconomic headwinds, also added to the challenges. Among other factors, elevated borrowing costs resulting from the persistently high interest rates had a dampening effect on the market. As a result of these macroeconomic challenges and the associated reluctance to invest, 2024 saw little in the way of transactions overall.

The portfolios in question have so far proven to be crisis-resistant with no structural anomalies. Although the number of exposures with increased risk content subject to close monitoring rose over the course of 2024, these loans remained at a moderate level relative to unproblematic financing as at December 31, 2024. Moreover,

critical exposures were often able to be transferred back to normal processing because counterparties stabilized or because of portfolio restructuring. The heightened requirements established in recent years with regard to the underlying value and cash flow performance of financed real estate had a supportive effect.

Nevertheless, uncertainty stemming from risk factors of relevance for commercial real estate finance persists, particularly in terms of whether financially viable rental and purchase prices can be achieved. This could adversely impact on cash flow, capital expenditure, and market values in 2025. For a return to a normal level, interest rates must be stable and the economy and the macroeconomic climate must stage a significant and sustained recovery.

#### Risks specific to individual real estate finance segments

Since 2023, **hotel** occupancy has largely stabilized and in 2024 was on a par with the level seen before the pandemic. In 2024, room occupancy at most hotels was higher than in 2023 almost across the board. Higher room prices provided a further boost to revenue. Material risk factors for hotel real estate continue to be the shortage of skilled workers and the ongoing pressure from competitors and rising costs.

**Office real estate** was subject to uncertainty with regard to tenants' future wishes and their space requirements in light of the new ways of working, which involve new space concepts and remote working. It is becoming apparent that less space will be required going forward, with demand focused on modern, high-quality, and ESG-compliant space in city centers or well connected locations with good access to services and amenities. Another adverse factor for this segment is the ongoing weakness of the economy, which is resulting in reduced demand for office space as it is causing many businesses to reconsider their growth and investment plans.

The rental markets for **department stores, shopping malls, and inner-city commercial properties** that are mainly used for retail/wholesale businesses not offering day-to-day essentials made a modest recovery in 2024 on the back of the rise in rents on new contracts. However, there are few signs of an upturn in consumer spending as price- and calendar-adjusted retail sales were only marginally higher year on year. Consumer sentiment remains very subdued, as do the general economic conditions.

The market for construction transactions remained challenging in 2024, with market participants adopting a wait-and-see approach and there was very little fresh impetus. Real estate rentals and sales continued to suffer delays.

**Property development transactions** showed the first signs of growth, led by private own and third-party use. The market for **project development** remained difficult in 2024. Notably, the traditional project development model of building for subsequent sale did not see an improvement. There were also challenges in relation to **construction projects that had not yet commenced** as a result of delayed planning permissions, increased construction costs, and difficulty in exiting projects. An increase in interest rates during the planning period also had a braking effect on construction projects. This affected DZ HYP's financing for land purchases, in particular.

#### Lending volume by finance segment

As at December 31, 2024, the volume of corporate loans extended by DZ HYP amounted to a total of €46.5 billion (December 31, 2023: €46.7 billion). Of this total, the following amounts were attributable to the aforementioned asset classes as at the reporting date (figures as at December 31, 2023 shown in parentheses):

- Hotel financing: €2.2 billion (€2.2 billion)
- Office real estate financing: €14.6 billion (€14.8 billion)
- Department store financing: €0.4 billion (€0.5 billion)
- Shopping mall financing: €2.5 billion (€2.6 billion)
- Financing for inner-city commercial properties mainly used for retail/wholesale businesses not offering day-to-day essentials: €0.8 billion (€0.9 billion)
- Property developer and project developer financing and financing for land purchases: €5.8 billion (€5.7 billion)

Financing for property developers and project developers and financing for land purchases also include certain portions of the financing for the aforementioned asset classes, in particular the financing of office real estate, which had a volume of €2.5 billion as at December 31, 2024 (December 31, 2023: €2.6 billion).

### 8.8.3 Financing for retail customers in the consumer finance business

The economic conditions described in chapter VI.5.2 also impact on the financial strength of retail customers. This was especially apparent in TeamBank's consumer finance business. Some key risk indicators deteriorated over the course of 2024. Among other things, this led to a rise in non-performing loans.

As at December 31, 2024, the volume of consumer finance extended by TeamBank amounted to €14.1 billion (December 31, 2023: €13.4 billion).

## 8.9 Credit portfolios particularly affected by acute global crises

The following sections present the lending volume in the credit portfolios in which the effects of acute global crises were more noticeable than in the rest of the credit portfolios.

This exposure mainly comprised short-dated trade finance, project finance backed by export credit agencies, and syndicated bank loans. Fig. VI.31 shows the breakdown of the lending volume in the countries affected by the various crises.

In 2024, Saudi Arabia was classified as a country affected, in the broader sense, by the war between Israel and Hamas. This means that the total lending volume and total uncollateralized lending volume differ from the corresponding disclosures in the 2023 risk report.

The lending volume of the **Bank sector** in countries affected by global crises accounted for 0.9 percent of the total lending volume as at December 31, 2024, as it had done at the end of 2023. **DZ BANK's** lending volume accounted for 1.5 percent of the total lending volume, which was also largely unchanged year on year (figure in the 2023 risk report excluding Saudi Arabia: 1.4 percent).

## 8.10 Credit portfolios with increased risk content

The lending volume in the credit portfolios with increased risk content is analyzed separately because of their significance for the risk position.

Finance for cruise ships, which had previously been assigned to the credit portfolios with increased risk content, was no longer a special focus of credit risk management as at the end of 2024. This was in light of the positive changes in the industry, including substantial growth in operating income and a significant improvement in the liquidity situation. This means that the disclosures on finance for cruise ships that had still been included in the risk report in the 2024 interim group management report have now been omitted.

FIG. VI.31 – BANK SECTOR: LENDING VOLUME IN COUNTRIES PARTICULARLY AFFECTED BY ACUTE GLOBAL CRISES

| € million                                                                                    | Bank sector   |               | DZ BANK       |               |

#### 8.10.1 Finance for cruise ship building

A distinction is made between cruise ship finance and the financing of cruise ship building. This segment, which exclusively affects **DZ BANK** in the Bank sector, is still undergoing a large-scale transformation process.

The shipyards' basic level of capacity utilization is ensured for 2025 and 2026. Growing demand for cruise ships has resulted in further orders being generated, which, in some cases, has secured capacity utilization until part way through 2029. Nevertheless, the challenges of the last few years have taken a heavy toll on customers' credit quality. The affected companies' financial circumstances have not yet stabilized sufficiently, making the outlook uncertain.

The lending volume related to the financing of cruise ship building stood at €422 million as at December 31, 2024 (December 31, 2023: €337 million). Collateral worth €354 million was available as at December 31, 2024 (December 31, 2023: €258 million). As at the reporting date, the collateral chiefly comprised export credit insurance of €177 million (December 31, 2023: €179 million) and €152 million from other public-sector guarantees.

#### 8.10.2 Finance for automotive suppliers

In addition to the factors described in chapter VI.8.8.1 that apply to the automotive sector as a whole, conditions remain particularly challenging for automotive suppliers in Germany.

The automotive supply industry's capital requirements remain at a record level and margins are under increasing pressure. Compared with vehicle manufacturers, automotive suppliers are in a relatively weak competitive position. Financial performance in the supply industry hinges primarily on the volume of vehicles produced, which was low in 2024 due to waning demand. This is reflected in a fall in the number of order call-offs, which remain very volatile. The general expectation is that this will also be the case in 2025, especially in Europe and Germany.

The technology and development expertise of major global suppliers will ensure that they remain the partner of choice for global vehicle manufacturers. However, they are also in competition with new market players from Asia, who are leading the way when it comes to assistance systems and digitalization and will therefore acquire a growing share of value added at the expense of established suppliers. In the years ahead, growth impetus is anticipated first and foremost from Asia, and also to a lesser extent from member countries of the North

American Free Trade Agreement (NAFTA). Uncertainty surrounding future drive systems and vehicle designs as well as expected geopolitical tensions and tariffs will likely have a long-term adverse impact on the market and thus also on suppliers and their transformation. It is also anticipated that the cost-cutting programs of European vehicle manufacturers will eat into suppliers' financial performance.

Within the Bank sector, finance for companies in the automotive supply industry, which falls into the 'corporates' asset class, mainly relates to DZ BANK. As at the reporting date, the loans and advances in the **Bank sector** and at **DZ BANK** amounted to €2,887 million (December 31, 2023: €3,475 million) and €2,709 million (December 31, 2023: €3,338 million) respectively. The year-on-year decline in the lending volume was primarily due to changes in how the portfolio is defined at DZ BANK. This effect amounted to around €600 million.

#### 8.10.3 Finance for borrowers in the clothing and textile industry

The clothing and textile industry tends to be sensitive to changes in the economic environment and inflation and has seen an increased number of insolvencies of late. Although revenue had picked up sharply in 2023, it tailed off again in 2024 amid persistently slack consumer demand. The luxury and upper price segment, which had previously been robust, also recorded falling or flat revenue. Wage increases, a rise in energy costs, and inflation had not yet been fully priced in by dealers, which weighed heavily on the margin in some cases.

The clothing and textile industry depends to a large extent on the procurement of goods from Asia. Although supply chains were intact once again in 2024, there were sporadic delays because freight ships had to be rerouted due to attacks by Houthi rebels in the Red Sea. Unrest in Bangladesh and the resulting temporary factory closures led to a backlog in production. This meant that procurement continued to be expensive, stockpiling had to be stepped up, and uncertainty remained high. The current appreciation of the US dollar is making imports increasingly expensive, and it is difficult to pass on the higher procurement costs to consumers amid the present challenging market environment.

Within the Bank sector, the lending exposure to the clothing and textile industry is concentrated at DZ BANK. As at December 31, 2024, the lending volume in the **Bank sector** and at **DZ BANK** in this industry amounted to €1,718 million (December 31, 2023: €1,757 million) and €1,658 million (December 31, 2023: €1,690 million) respectively.

#### 8.10.4 Finance for borrowers in the construction industry and for home improvement stores

Given their above-average sensitivity (with a time lag) to changes in the wider economy and the fierce level of competition, the construction industry and home improvement stores have been battling several negative factors for quite a while.

The rise in construction costs, the current interest-rate environment, and the policy situation are placing a particular burden on residential construction. These factors have significantly depressed demand across the entire industry.

The number of completed homes fell once again in the year under review, and the number of residential planning permissions also experienced a further substantial decline. The level of orders on hand forecast for industrial, commercial, and public-sector construction in 2025 is largely stable. In the year ahead, impetus is expected from the financing options that have been agreed for railway infrastructure and in energy supply and network expansion. Overall, it is unlikely that the decline in orders on hand in residential construction will be able to be offset, and capacity utilization is expected to continue to go down in the construction segment. Nevertheless, construction companies with international operations can compensate for the situation in the German economy to some extent.

Despite the stabilizing effect of cost-conscious customers who are increasingly carrying out repairs themselves, the level of consumer demand experienced by home improvement stores is being dampened by geopolitical tensions, the dependence on the construction industry, and a bleak economy. Even though profit margins have

since been able to be increased slightly as a result of product range adjustments, cost cutting, and renegotiations with suppliers, there are no signs yet of a turnaround.

The lending volume in this portfolio is mainly attributable to DZ BANK. As at December 31, 2024, loans and advances in the **Bank sector** and at **DZ BANK** amounted to €6,630 million (December 31, 2023: €7,456 million) and €5,930 million (December 31, 2023: €6,776 million) respectively. The reduction in the lending volume compared with December 31, 2023 was due in particular to redemptions by a number of individual borrowers.

## 8.11 Volume of closely monitored and non-performing loans

### 8.11.1 Closely monitored loans and forborne exposure

Fig. VI.32 shows the volume of loans on the three monitoring lists – **yellow list**, **watchlist**, and **default list** – and the forborne exposure also included in these lists. A further item in the table shows the exposure managed as forborne but not subject to intensified loan management, i.e. not included in the lists.

FIG. VI.32 – BANK SECTOR: CLOSELY MONITORED LENDING VOLUME AND FORBORNE EXPOSURE

| € million                                       | Bank sector   |               | DZ BANK       |               |
|-------------------------------------------------|---------------|---------------|---------------|---------------|
|                                                 | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024 | Dec. 31, 2023 |
| Yellow list lending volume                      | 4,842         | 3,786         | 3,367         | 2,665         |
| of which: forborne exposure                     | 152           | 626           | 94            | 463           |
| Watchlist lending volume                        | 4,712         | 4,901         | 2,425         | 3,094         |
| of which: forborne exposure                     | 1,068         | 999           | 677           | 741           |
| Default list lending volume                     | 5,475         | 3,792         | 3,332         | 2,185         |
| of which: forborne exposure                     | 2,759         | 1,473         | 1,927         | 884           |
| <b>Total lending volume on monitoring lists</b> | <b>15,029</b> | <b>12,479</b> | <b>9,124</b>  | <b>7,943</b>  |
| of which: forborne exposure                     | 3,979         | 3,097         | 2,698         | 2,088         |
| Off-monitoring-list forborne exposure           | 207           | 327           | –             | –             |
| <b>Total forborne exposure<sup>1</sup></b>      | <b>4,186</b>  | <b>3,424</b>  | <b>2,698</b>  | <b>2,088</b>  |

<sup>1</sup> Both on and off the monitoring lists.

The **closely monitored lending volume** in the **Bank sector** rose by 20 percent from December 31, 2023 to December 31, 2024. This increase was chiefly due to rises of €1,181 million at DZ BANK, €944 million at DZ HYP, €222 million at BSH, and €140 million at TeamBank.

The closely monitored lending volume at **DZ BANK** rose from €7,943 million as at December 31, 2023 to €9,124 million as at December 31, 2024, which constituted an increase of 15 percent. This rise was mainly attributable to an increase of €1,148 million in the lending volume on the default list.

The **forborne exposure** rose from €3,424 million as at December 31, 2023 to €4,186 million as at December 31, 2024, predominantly owing to an increase of €610 million at DZ BANK.

### 8.11.2 Non-performing loans

As at December 31, 2024, the volume of non-performing loans (NPLs) in the **Bank sector** had risen to €5,475 million from €3,792 million as at December 31, 2023. This increase was chiefly due to the rise in non-performing loans of €1,148 million at DZ BANK, €320 million at DZ HYP, and €105 million at TeamBank. This caused the NPL ratio to advance from 0.8 percent as at December 31, 2023 to 1.1 percent as at December 31, 2024.

Non-performing loans at **DZ BANK** amounted to €3,332 million as at December 31, 2024 (December 31, 2023: €2,185 million). This caused the NPL ratio to also advance to 1.1 percent (December 31, 2023: 0.7 percent).

Fig. VI.33 shows the key figures relating to non-performing loans.

FIG. VI.33 – BANK SECTOR: KEY FIGURES FOR NON-PERFORMING LOANS

|                                                         | Bank sector   |               | DZ BANK       |               |
|---------------------------------------------------------|---------------|---------------|---------------|---------------|
|                                                         | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024 | Dec. 31, 2023 |
| Total lending volume (€ billion)                        | 486.1         | 471.0         | 306.3         | 291.5         |
| Volume of non-performing loans (€ billion) <sup>1</sup> | 5.5           | 3.8           | 3.3           | 2.2           |
| Balance of loss allowances (€ billion) <sup>2</sup>     | 2.3           | 1.6           | 1.5           | 1.0           |
| Coverage ratio (percent) <sup>3</sup>                   | 74.3          | 79.7          | 67.9          | 78.8          |
| NPL ratio (percent) <sup>4</sup>                        | 1.1           | 0.8           | 1.1           | 0.7           |

<sup>1</sup> Volume of non-performing loans excluding collateral.

<sup>2</sup> IFRS specific loan loss allowances at stage 3, including provisions.

<sup>3</sup> Loss allowances as specified in footnote 2, plus collateral, as a proportion of the volume of non-performing loans.

<sup>4</sup> Volume of non-performing loans as a proportion of total lending volume.

## 8.12 Risk position

### 8.12.1 Risks in the entire credit portfolio

The risk capital requirement for credit risk is based on a number of factors, including the size of single-borrower exposures, individual ratings, collateral, and the industry sector of each exposure.

As at December 31, 2024, the **credit value-at-risk** in the Bank sector was €4,011 million (December 31, 2023: €3,971 million). The credit risk **limit** as at December 31, 2024 amounted to €4,994 million (December 31, 2023: €4,988 million).

**DZ BANK's** credit value-at-risk as at December 31, 2024 amounted to €2,306 million (December 31, 2023: €2,359 million), with a **limit** of €2,800 million (December 31, 2023: €2,760 million).

Fig. VI.34 shows the credit value-at-risk together with the average probability of default and expected loss.

FIG. VI.34 – BANK SECTOR: FACTORS DETERMINING THE CREDIT VALUE-AT-RISK

|                                          | Bank sector   |               | DZ BANK       |               |
|------------------------------------------|---------------|---------------|---------------|---------------|
|                                          | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024 | Dec. 31, 2023 |
| Average probability of default (percent) | 0.4           | 0.3           | 0.2           | 0.2           |
| Expected loss (€ million)                | 462           | 440           | 184           | 186           |
| Credit value-at-risk (€ million)         | 4,011         | 3,971         | 2,306         | 2,359         |

In the analysis of **individual concentrations** as at December 31, 2024, the 20 counterparties associated with the largest credit value-at-risk accounted for 23 percent of the total credit value-at-risk in the **Bank sector** (December 31, 2023: 28 percent) and 38 percent of the total credit value-at-risk at **DZ BANK** (December 31, 2023: 40 percent). Compared with the end of 2023, these shares were down by 5 percentage points and 2 percentage points for the Bank sector and DZ BANK respectively.

### 8.12.2 Risks in the credit portfolios with increased risk content

The risk capital required in the **Bank sector** and at **DZ BANK** for credit portfolios exposed to increased credit risk is shown in Fig. VI.35.

FIG. VI.35 – BANK SECTOR: CREDIT VALUE-AT-RISK<sup>1</sup> FOR CREDIT PORTFOLIOS WITH INCREASED RISK CONTENT

| € million                                                                              | Bank sector   |               | DZ BANK       |               |
|----------------------------------------------------------------------------------------|---------------|---------------|---------------|---------------|
|                                                                                        | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024 | Dec. 31, 2023 |
| Finance for cruise ship building                                                       | 25            | 4             | 25            | 4             |
| Finance for automotive suppliers                                                       | 55            | 46            | 54            | 45            |
| Finance for borrowers in the clothing and textile industry                             | 14            | 10            | 12            | 9             |
| Finance for borrowers in the construction industry (including home improvement stores) | 56            | 50            | 35            | 35            |

<sup>1</sup> Excluding decentralized capital buffer requirement.

The increase in credit value-at-risk for finance for cruise ship building compared with December 31, 2023 was largely due to deterioration in individual credit standings.

## 9 Equity investment risk

### 9.1 Definition and business background

Equity investment risk is defined as the risk of losses arising from negative changes in the fair value of that portion of the long-term equity investments portfolio for which the risks are not included in other types of risk. Equity investment risk also includes the risk of losses arising from negative changes in the fair value of the management units' real estate portfolios caused by a deterioration in the general real estate situation or specific factors relating to individual properties (such as vacancy, tenant default, loss of use).

In the Bank sector, equity investment risk arises primarily at DZ BANK, BSH, and TeamBank.

The entities in the Bank sector hold long-term equity investments largely for strategic reasons, especially to cover markets, market segments, or parts of the value chain in which they themselves or the cooperative banks are not active. These investments therefore support the sales activities of the cooperative banks or help reduce costs by bundling functions. The investment strategy is continuously aligned with the needs of Cooperative Financial Network policy.

### 9.2 Risk strategy and responsibility

**Risk strategy requirements** must be observed in the management of long-term equity investments. Such management is subject to the principle that equity investment risk (measured as risk capital requirement) may be taken on only if the risk remains below the existing limits.

The **investment portfolio is managed** in line with the provisions of the equity investment risk strategy. At DZ BANK, these provisions are supplemented by rules and instructions, which stipulate, for example, that ongoing investment management and the monitoring of the performance of long-term equity investments are subject to MaRisk requirements.

Decisions on whether to acquire or dispose of **long-term equity investments** are made by the Board of Managing Directors of the entities in the Bank sector in consultation with the relevant committees.

At DZ BANK, the Group Finance division is responsible for **supporting these investments**, whereas at BSH the task falls within the scope of the Central Services/Policy/International division and the Financial Controlling division.

Equity investment risk in the Bank sector is **measured and monitored** by DZ BANK.

### 9.3 Risk factors

The level of equity investment risk is significantly influenced by specific risk factors such as the equity investment's industry sector, the location of its registered office, and the amount of the investment. The possibility cannot be ruled out that a future impairment test on the long-term equity investments held by the entities in the Bank sector could lead to a significant reduction in the carrying amounts of these investments reported on the balance sheet. In the case of non-controlling interests, there is also a risk that key information may not be available or cannot be obtained promptly by virtue of the fact that the investment is a minority stake and this could result in a need to recognize impairment losses.

### 9.4 Risk management

The carrying amounts of the long-term equity investments are regularly tested for possible impairment in the last quarter of the financial year.

For the real estate directly owned by DZ BANK, the Bank Finance division and the central facility management team perform an impairment test every six months based on the carrying amounts and current valuation reports. If there are any indications during the course of the year of possible impairment, more frequent impairment tests are also carried out.

The risk capital requirement for the vast majority of the long-term equity investments is determined using a Monte Carlo simulation with a 1-year observation period and a confidence level of 99.9 percent (portfolio risk measurement). In this method, portfolio concentrations in sectors and individual counterparties are taken into account by simulating industry-wide and individual investment-related risk factors. Unlike in 2023, a historical simulation is now used instead of the previous assumption of logarithmic normal distribution. The risk capital requirement is influenced, in particular, by the market values of the long-term equity investments and by past changes in market value, with market price fluctuations mainly derived from reference prices listed on an exchange. For a minority of the long-term equity investments, a look-through approach is taken in which the individual risk types that exist in each long-term equity investment are measured (differentiated risk measurement).

### 9.5 Carrying amounts of long-term equity investments and risk position

As at December 31, 2024, the **carrying amounts of long-term equity investments** relevant for the measurement of equity investment risk amounted to €2,827 million in the **Bank sector** (December 31, 2023: €3,046 million) and €2,139 million at **DZ BANK** (December 31, 2023: €2,175 million).

The **risk capital requirement** for equity investment risk in the **Bank sector** was calculated to be €807 million as at the reporting date (December 31, 2023: €998 million). The **limit** was €1,364 million (December 31, 2023: €1,281 million). The **risk capital requirement** for **DZ BANK** as at December 31, 2024 came to €653 million (December 31, 2023: €664 million) with a **limit** of €870 million (December 31, 2023: €795 million).

The decline in the risk capital requirement was attributable to the sale of individual long-term equity investments. A change in the risk modeling methods used also contributed to the reduction in risk.

## 10 Market risk

### 10.1 Definition

Market risk is the risk of loss that could arise from adverse changes in market prices or in parameters that influence prices. Market risk encompasses a number of risk subtypes, including interest-rate risk in the banking book, interest-rate risk in the trading book, spread risk (constantly monitored component; broken down by banking book and trading book) and migration risk (as intermittent spread risk), currency risk, equity risk, fund price risk, commodity risk, and asset-management risk. Parameters that determine market risk also include a category of risk factors referred to as 'opaque'. These risk factors are parameters that are relevant to

measurement but cannot be directly observed and must therefore be derived from quoted market prices using models.

The subcategories of market risk are defined as follows:

- **Interest-rate risk** is the risk of losses that could arise from financial instruments due to a change in the (notionally credit-risk-free) basis yield curve or the interest-rate volatility used for valuation. It also comprises the risk of losses that could arise from the change in the spread of discount and forward curves relative to the basis yield curve if there are differences in collateralization, payment frequency (known as the tenor basis spread), or the base currency (known as the cross-currency spread) relative to the basis yield curve. Credit spreads or issuer-specific spreads are explicitly not a component of interest-rate risk. They are subsumed under spread risk.
- **Spread risk** is the risk of losses that could arise from financial instruments due to a change in the credit spreads with an unchanged credit rating.
- **Migration risk** is the risk of losses that could arise from financial instruments due to a change in the issuer credit ratings or issue ratings, which are parameters that have an influence on prices.
- **Currency risk** is the risk of losses that could arise from financial instruments due to a change in exchange rates or exchange-rate volatility.
- **Equity risk** is the risk of losses that could arise from financial instruments due to a change in share prices or share price volatility.
- **Fund price risk** is the risk of losses that could arise from a change in fund prices where the funds' risks are not covered by other types or subtypes of market risk or by equity investment risk.
- **Commodity risk** is the risk of losses that could arise from financial instruments (including cryptocurrencies) due to a change in commodity prices or commodity price volatility.
- **Asset-management risk** is the risk that further margin payments have to be made to investors due to contractual obligations. These payments fall due if guaranteed minimum capital values are not met for guarantee funds or guarantee products.
- **Market liquidity risk** is the risk of losses that could arise from adverse changes in market liquidity – for example, because of market disruption or a reduction in market depth – such that assets can only be liquidated in markets if they are discounted and that it is only possible to carry out dynamic risk management on a limited basis.

For the purposes of measuring and managing risk, market risk is broken down into spread and migration risk, asset-management risk, and general market risk, the last of which encompasses all the other risk subtypes.

## 10.2 Business background and risk strategy

### 10.2.1 Business background

The DZ BANK Group is exposed to considerable market risk in the Bank sector. Market risk arises mainly in connection with BSH, DZ HYP, and UMH in addition to DZ BANK. The assumption of market risk by these entities in the Bank sector is primarily attributable to the DZ BANK Group's strategic focus on the Cooperative Financial Network. This strategy means that each entity in the DZ BANK Group specializes in certain types of product with a corresponding impact on the respective entity's risk profile.

Market risk arises in the Bank sector mainly as a consequence of the following business activities:

- **DZ BANK:** own trading activities; traditional lending business with non-retail customers
- **BSH:** building society operations; traditional lending business largely aimed at financing privately owned real estate; securities portfolios
- **DZ HYP:** financing for real estate and local authorities; portfolios of securities held to manage liquidity and cover assets
- **UMH:** own-account investing activities; guarantee obligations to customers contained in Riester fund-linked savings plans and guarantee funds

UMH's Riester fund-linked savings plans consist of UniProfiRente, a retirement pension solution certified and subsidized by the German government. The amounts paid in during the contributory phase and the contributions received from the government are guaranteed to be available to the investor at the pension start date together with any increase in value achieved during the contributory phase. The pension is then paid out under a payment plan with a subsequent life annuity. If UMH has to provide additional capital to be able to meet its guarantee commitments, this could have a detrimental impact on the financial performance of the DZ BANK Group.

Liabilities and – where present in a group entity – assets related to direct pension commitments are a further source of market risk. Market liquidity risk arises primarily in connection with securities already held in the portfolio as well as funding and money market business.

### 10.2.2 Risk strategy

The following principles for managing market risk apply to the entities in the **Bank sector**:

- Market risk is only taken on to the extent that it is necessary to facilitate attainment of business policy objectives.
- The assumption of market risk is only permitted within the existing limits.
- Statutory restrictions, provisions in the Articles of Association, or other limitations enshrined in the risk strategy that prohibit the assumption of certain types of market risk for individual management units are observed.

The entities in the Bank sector pursue the following strategies in relation to the individual **types of market risk**:

- **Spread and migration risk** is consciously and selectively assumed and managed within the limits.
- **Interest-rate risk** associated with the original business purpose of the management units is hedged within defined limits. In contrast, interest-rate risk from defined benefit obligations and market risk from assets (generally funds) held to meet defined benefit obligations are accepted and included in the calculation of risk-bearing capacity.
- **Equity risk** and **fund price risk** are consciously assumed within the limits in place and actively managed.
- Virtually all **currency risk** is hedged.
- **Commodity risk** is assumed only to a very small degree.
- **Market liquidity risk** is consciously assumed following an analysis that takes into account the prevailing liquidity.

## 10.3 Risk factors

### 10.3.1 General market risk factors

Spread and migration risk, interest-rate risk, equity risk, fund price risk, commodity risk, and currency risk are caused by changes in the yield curve, credit spreads, exchange rates, share prices, and commodity prices. Spread risk, including migration risk, is the most significant type of market risk for the entities in the Bank sector.

The widening of credit spreads is triggered by an elevated level of market uncertainty about assets subject to default risk. Rising credit spreads stem from market players being more reluctant to buy – or more willing to sell – assets subject to default risk. If there is also a deterioration in rating agencies' assessments of credit risk, this triggers a downgrade in the issuer credit rating or issue rating (migration of credit ratings).

### 10.3.2 Specific market risk factors

A widening of credit spreads and migrations of credit ratings can stem from a number of macroeconomic risk factors. These include the **escalation of geopolitical tensions** and resulting **trade friction** (chapter VI.5.2.1), a **global economic downturn** (chapter VI.5.2.2), and **economic policy divergence in the eurozone** (chapter VI.5.2.3). Such developments can lead to increased credit spreads and to the migration of credit ratings of bonds held by entities in the Bank sector. This could particularly affect government bonds from countries in poor financial health, such as Italy and France.

The unexpected movements in the interest-rate market described in chapter VI.5.2.6 could also have an adverse impact on the Bank sector's investments as follows:

A **rise in interest rates** and a widening of bond spreads would lead to a reduction in the fair values of investments and funding. Falls in fair value caused by a rapid rise in interest rates or the widening of spreads could – depending on the term structure of the capital market asset or liability products – have a temporary or permanent impact on profit and equity. A negative change in the fair values of investments associated with a widening of credit spreads in isolation could also cause a deterioration in risk-bearing capacity.

For the asset management activities of UMH, there is also a risk that rising interest rates could cause the fair values of fixed-income funds to fall. Particularly in the case of pension schemes with an unfavorable duration asymmetry and a high volume of fixed-income funds, this may mean that the guarantee commitments given to customers cannot be met from the investment instruments in the products.

By contrast, a **fall in interest rates** would increase the fair values of the investments and funding, which, for terms of liabilities that are longer than the average investment horizon (for example, defined benefit obligations and pension schemes with an unfavorable duration asymmetry), could have an adverse impact on profit and equity.

A share price slump in the equity markets in the wake of heightened **volatility in the global financial markets** could result in fair value losses on the investments of entities in the Bank sector and on the shareholdings in UMH's pension products. The potential causes of such a development are explained in chapter VI.5.2.7.

#### 10.4 Organization and responsibility

Market risk in the **Bank sector** is managed on a decentralized basis by the individual management units within the centrally specified limits for the capital requirement for market risk. Each unit bears responsibility for the risk and performance associated with each portfolio. Responsibility for managing risk within a management unit is normally brought together under a local treasury unit.

One exception is **DZ BANK**, where portfolios are managed at the level of subordinate organizational units (group, department, division). In this case, the relevant traders bear direct responsibility for risk and performance. The organizational units are structured in such a way that the responsibility for the marketing of certain types of product is assigned in each case to a trading division with product responsibility.

#### 10.5 Management of market risk

##### 10.5.1 Central market risk measurement

###### Central market risk measurement in the overall portfolio

Various components are used to quantify market risk in the Bank sector from a present-value perspective. These components are combined to determine the aggregate risk capital requirement for market risk, taking into account the effects of concentration and diversification. The risks arising in connection with the assets and liabilities associated with direct pension commitments are also factored in. The models are operated centrally by DZ BANK and are fed with input data provided by the management units on each trading day. Sector-wide standards and rules are in place to ensure that the modeling is appropriate.

The first component of the measurement approach creates a spread and migration risk model based on a **Monte Carlo simulation**. It determines the combined spread and migration risk over a longer-term (strategic) horizon of 1 year with a confidence level of 99.9 percent. Whereas spread risk quantifies credit-risk-related losses from financial instruments in a short-term view of value-at-risk, this becomes the combined spread and migration risk in the risk capital requirement over a longer-term perspective. For this reason, migration risk is not shown in the table of values-at-risk in Fig. VI.36.

The second component is a value-at-risk model based on a **historical simulation** in which the general market risk is determined from a short-term (operational) perspective over one day and with a unilateral confidence level of 99.0 percent. The day-by-day calculation of market risk is based on a historical observation period of 250 trading days. A number of risk factors, categorized into groups, are included in the risk calculation. The relevant risk factor groups considered in the risk model include yield curves, basis and credit spreads, share prices, exchange rates, and commodity prices. The model also includes implied volatility in the risk measurement. Drawing on the results of the value-at-risk measurement, a transformation model turns the operational key risk indicators (also taking account of stress events) into a strategic perspective in which a 1-year holding period and a confidence level of 99.9 percent are assumed.

In the last step, the results from the spread and migration risk model and from the transformation model are then combined to give the **aggregate risk capital requirement** for market risk.

#### Central market risk measurement for interest-rate risk in the banking book

For internal sector-wide management purposes, the banking book and trading book are treated in the same way in terms of the models and key risk indicators used, the frequency of risk measurement, and the main risk measurement parameters. To supplement this risk measurement approach in which the banking and trading books are analyzed holistically, interest-rate risk in the banking books of the entities in the Bank sector from a regulatory perspective is managed separately using a present-value approach.

On behalf of the other management units in the Bank sector, DZ BANK also operates a partially centralized model for quantifying periodic interest-rate risk. Overall, these methods are used to record the impact from changes in interest rates, both from an economic perspective (based on present value) and from the angle of net interest income.

#### Concentrations of market risk

Concentrations in the portfolio affected by market risk are identified by classifying the exposure in accordance with the risk factors associated with interest rates, spreads, migration, equities, currencies, and commodities. This incorporates the effects of correlation between these different risk factors, particularly in stress phases.

### 10.5.2 Decentralized market risk measurement

#### Decentralized measurement of general market risk and spread risk

In addition to the models specified in chapter VI.10.5.1, the material **management units** operate their own risk models to satisfy ICAAP requirements from the perspective of the individual institution. With the exception of asset-management risk at UMH, the results from these models are not used to manage market risk on a present-value basis in the Bank sector and therefore do not form part of this risk report.

#### Decentralized measurement of asset-management risk

The risk capital requirement for asset-management risk is determined locally by **UMH** and then added to the risk capital requirement for general market risk and spread risk calculated centrally for the Bank sector. Asset-management risk comprises risks related to guarantee funds and Riester pensions. Following the approach used for the central measurement of market risk, the risk capital requirement for asset-management risk is calculated on the basis of a Monte Carlo simulation, using a confidence level of 99.9 percent and a 1-year holding period, and taking into account the specific investment selections made in the customer investment account.

#### Decentralized measurement of periodic interest-rate risk and spread risk in the banking book

In addition to the present-value perspective, which considers the total term when determining the risk of transactions involving risk, the interest-rate risk in the banking book (IRRBB) and the credit spread risk in the banking book (CSRBB) are managed in a periodic approach limited to a period of 1 year. These risks are also referred to as periodic interest-rate risk and spread risk. Periodic risk management is based on specific regulatory requirements.

Periodic interest-rate risk and spread risk in the banking book represent the impact of changes – stipulated by the supervisory authority – in interest rates and spreads on the accounting profit of the DZ BANK Group and DZ BANK. Building on the periodic net interest income (NII) risk, which measures the effects of interest-rate and spread changes on net interest income without considering measurement effects, the NIIMV risk also includes the risk resulting from present-value changes in market value (MV) in respect of transactions recognized in the income statement or directly in equity (other comprehensive income, OCI) in accordance with IFRS. OCI consists of changes in equity that are not captured in the income statement and are not attributable to deposits or withdrawals by owners. In this manner, all earnings risks impacting on the income statement or equity for a forecast horizon of 1 year are condensed into a periodic key risk indicator.

The interest-rate scenarios used to calculate periodic interest-rate risk in the banking book contain substantial parallel shifts and rotations of the current yield curve. To calculate periodic spread risk in the banking book, both general and rating-dependent spread changes are taken into account.

The interest-rate sensitivities for periodic interest-rate risk and spread risk in the banking book are determined by changing the yield curve. Some of the management units use behavior-based models to measure periodic interest-rate risk. These models help, in particular, to accurately reflect the optionalities in the traditional lending business and in building society operations. Examples of these include options for drawing down loans or credit lines, termination options, and special repayment options. Calculating NII risk involves a 1-year future projection of NII. This is based on assumptions regarding interest-rate changes (swap curves) and an assumption of a constant balance sheet to aid comparability and predictability. The difference between the NII simulated in the baseline scenario (constant interest rates) and the NII simulated in an assumed interest-rate scenario is described as the periodic interest income risk for the particular interest-rate scenario.

NII risk is determined by the management units on a decentralized basis in line with DZ BANK's rules. DZ BANK's Group Risk Controlling division supplements the results of the decentralized calculations with market value effects relevant to the balance sheet (NIIMV) and condenses the results into an aggregate figure representing the Bank sector's NIIMV risk.

#### 10.5.3 Backtesting and stress tests

The central value-at-risk model is subject to **backtesting**, the purpose of which is to verify the predictive quality of the model. Changes in the value of portfolios on each trading day are usually compared against the value-at-risk calculated using risk modeling. For UniProfiRente, backtesting is carried out on the basis of monthly changes in the value of the portfolio.

Risks arising from extreme market situations are primarily recorded using **stress tests**. The crisis scenarios underlying the stress tests include the simulation of significant fluctuations in risk factors and serve to highlight potential losses not generally recognized in the value-at-risk approach. Stress tests are based on extreme market fluctuations that have actually occurred in the past together with crisis scenarios that – regardless of market data history – are considered to be economically relevant. The crisis scenarios used in this case are regularly reviewed to ensure they are appropriate. The following are deemed to be risk factors: interest-rate risk, spread risk, migration risk, currency risk, equity risk, and commodity risk.

#### 10.5.4 Management of limits for market risk

The starting point for limiting market risk is a limit for the capital requirement for market risk in the **Bank sector** specified as part of operational planning. This limit is broken down into an individual limit for the market risk capital requirement in each management unit.

Within **DZ BANK**, this limit is then further subdivided into a system of limits for the divisions, departments, and groups to appropriately reflect the decentralized portfolio responsibility assigned to these units and the nature of the bank from a regulatory perspective as a trading book institution. Limits are monitored on every trading day.

### 10.5.5 Mitigating market risk

The entities in the Bank sector use various approaches to mitigate market risk. For example, some market risk from the assets-side business (such as traditional lending business) or from the liabilities-side business (such as home savings deposits) is offset by suitable countervailing liability or asset transactions (such as own issues or securities). These activities are carried out as part of asset/liability management. In other cases, financial derivatives are used for hedging purposes.

As the measurement of market risk is based on the inclusion of the individual items subject to market risk, there is no need to monitor the economic effectiveness of hedges.

### 10.5.6 Managing the different types of market risk

#### Management of interest-rate risk

**Interest-rate risk arising from operating activities** at **DZ BANK** and **DZ HYP** is mitigated primarily by means of hedging using interest-rate derivatives, on the basis of either individual transactions or portfolios. At **BSH**, an asset/liability management approach based on the maturities of the securities in the investment portfolio is the predominant method used to manage interest-rate risk arising from the collective building society operations and the traditional lending business, including the interest-rate risk associated with direct pension commitments. Interest-rate derivatives are also used for risk management purposes but are currently of minor significance.

**DZ BANK** is notably exposed to significant **interest-rate risk from direct pension commitments** in addition to the interest-rate risk arising from operating activities. This risk is consciously assumed within the existing limits.

Periodic and present-value risk is taken into account when managing interest-rate risk.

#### Management of spread risk and migration risk

Most of the spread and migration risk in the **Bank sector** arises from non-trading portfolios and is consciously assumed within the established limits in accordance with the associated long-term investment strategy. Hedging instruments are also used in carefully selected trading book portfolios. The central measurement of this risk means that the level of the risk on every trading day is transparent. If there is any indication that the ability to bear the spread and migration risk is in jeopardy, Group Treasury at DZ BANK will initiate corrective measures across the sector.

#### Management of equity risk and fund price risk

Equity risk and fund price risk from the non-trading portfolios are managed first and foremost by directly changing the underlying exposure. Derivative products are also used within the trading portfolios to keep the type of risk involved within the allocated limits. Some funds are broken down into their constituent parts for the purposes of measuring the risk. In such cases, the risk is not treated as part of fund price risk, but is managed within the type of market risk determined for the constituent part concerned.

#### Management of asset-management risk

Asset-management risk arises from minimum payment commitments given by **UMH** and/or its subsidiaries for guarantee products. The risks from these guarantee products are managed mainly by using asset allocation. Asset-management risk is reported using UMH's separate internal system and is monitored regularly by UMH.

#### Management of market liquidity risk

The calculation of general market risk in the Bank sector using the transformation model and the spread and migration risk model takes market liquidity risk into account.

Within the transformation model, stress events are expressly integrated into the analysis when market risk is transferred from an operating perspective to a strategic perspective. The change in risk factors in these events is based on the assumption that it is not possible to make changes to the exposures in the portfolio of the Bank sector over a specified period.

The spread and migration risk model implicitly factors in phases of diminishing market liquidity via the calibration of the credit spread volatility included in the model. The estimation of volatility based on market data from the recent past also uses a lower limit determined from longer-term data. This prevents any low level of credit spread volatility in a calm market environment with normal liquidity from being transferred directly into the model parameters.

## 10.6 Risk position

### 10.6.1 Value-at-risk

Fig. VI.36 shows the average, maximum, and minimum values-at-risk measured for the Bank sector and DZ BANK over the reporting year, including a further breakdown by type of market risk. In addition, Fig. VI.37 shows the change in market risk for the Bank sector by trading day in the reporting period. In both figures, the value-at-risk relates to the **trading and banking books for regulatory purposes**.

FIG. VI.36 – BANK SECTOR: CHANGE IN MARKET RISK, BY RISK SUBTYPE<sup>1, 2</sup>

| € million                         | Bank sector   |         |         |         |               | DZ BANK       |         |         |         |               |
|-----------------------------------|---------------|---------|---------|---------|---------------|---------------|---------|---------|---------|---------------|
|                                   | Dec. 31, 2024 | Average | Maximum | Minimum | Dec. 31, 2023 | Dec. 31, 2024 | Average | Maximum | Minimum | Dec. 31, 2023 |
| Interest-rate risk                | 39            | 43      | 63      | 31      | 49            | 7             | 9       | 15      | 5       | 10            |
| Spread risk                       | 56            | 63      | 67      | 56      | 58            | 33            | 37      | 41      | 31      | 31            |
| Equity risk <sup>3</sup>          | 15            | 11      | 15      | 8       | 9             | 3             | 3       | 3       | 2       | 3             |
| Currency risk                     | 4             | 6       | 7       | 3       | 5             | 4             | 5       | 7       | 3       | 4             |
| Commodity risk                    | 1             | 1       | 2       | 1       | 2             | 1             | 1       | 1       | 1       | 1             |
| <b>Aggregate risk<sup>4</sup></b> | <b>68</b>     | 76      | 93      | 67      | 74            | <b>30</b>     | 39      | 45      | 30      | 37            |

<sup>1</sup> The disclosures relate to general market risk and spread risk. Asset-management risk is not included.

<sup>2</sup> Value-at-risk with 99.0% confidence level, 1-day holding period, 1-year observation period, based on a central market risk model for the Bank sector. Concentrations and effects of diversification were taken fully into account when calculating the risks.

<sup>3</sup> Including funds, if not broken down into constituent parts.

<sup>4</sup> Due to the diversification effect between the market risk subtypes, the aggregate risk does not tally with the total of the individual risks.

FIG. VI.37 – BANK SECTOR: CHANGE IN MARKET RISK, BY TRADING DAY<sup>1</sup>

<sup>1</sup> Value-at-risk with 99.0% confidence level, 1-day holding period, 1-year observation period, based on a central market risk model for the Bank sector. Concentrations and effects of diversification were taken fully into account when calculating the risks.

The value-at-risk for interest-rate risk in all of the portfolios and the value-at-risk for interest-rate risk in the banking book for regulatory purposes are calculated using identical risk models. Variations in risk values are attributable directly to differences in the calculation bases used for the various portfolios.

As at December 31, 2024, the value-at-risk for the **interest-rate risk in the banking book for regulatory purposes** was calculated as follows (prior-year figures in parentheses):

- **Bank sector:** €37 million (€48 million)
- **DZ BANK:** €4 million (€9 million)

The reduction in risk was partly attributable to particular scenarios no longer being included in the rolling observation period in the risk model. An improvement in the methods used to measure non-outsourced defined benefit obligations also contributed to the reduction in risk.

The decrease in value-at-risk in the Bank sector from €74 million as at December 31, 2023 to €68 million as at December 31, 2024 was mainly attributable to a reduction in spread risk, in addition to the diversification effect. This was due to particular scenarios no longer being included in the rolling observation period in the risk model.

#### 10.6.2 Periodic interest-rate risk and periodic spread risk in the banking book

The periodic interest-rate risk and spread risk calculated for the banking book are shown in Fig. VI.38.

FIG. VI.38 – BANK SECTOR: PERIODIC INTEREST-RATE RISK AND PERIODIC SPREAD RISK IN THE BANKING BOOK

| € million                                      | Bank sector   |               | DZ BANK       |               |
|------------------------------------------------|---------------|---------------|---------------|---------------|
|                                                | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024 | Dec. 31, 2023 |
| Periodic interest-rate risk (IRRBB NIIMV risk) | 288           | 558           | 185           | 563           |
| Periodic spread risk (CSRBB NIIMV risk)        | 90            | 202           | 70            | 17            |

The year-on-year decline in the IRRBB NIIMW risk of the Bank sector and of DZ BANK measured as at December 31, 2024 was largely attributable to the improved recognition of exposures as a result of enhancements to the IT infrastructure. The enhancements related to a new IT system from an external provider that went live for calculating periodic NII risk. Furthermore, this IT system draws on higher quality business data. Changes in fixed interest rates for short maturities also contributed to the decline in the IRRBB NIIMW risk.

In 2024, pension assets and liabilities were additionally included in the calculation of the CSRBB NIIMW risk. This led to a reduction in the CSRBB NIIMW risk in the Bank sector but to an increase in this risk at DZ BANK. The countervailing change in risk is due to the use of different worst-case scenarios.

#### 10.6.3 Risk capital requirement

As at December 31, 2024, the risk capital requirement for **market risk** in the **Bank sector** and at **DZ BANK** amounted to €3,621 million (December 31, 2023: €4,169 million) and €1,972 million (December 31, 2023: €1,757 million) respectively, with **limits** of €7,120 million (December 31, 2023: €6,470 million) and €3,000 million (December 31, 2023: €3,000 million) respectively. The reduction in risk was largely due to particular scenarios no longer being included in the rolling observation period in the risk model.

The Bank sector's risk capital requirement encompasses the **asset-management risk of UMH**. Asset-management risk as at December 31, 2024 amounted to €90 million (December 31, 2023: €273 million). The decrease in risk was mainly due to movements in interest rates and the buoyant equity markets.

## 11 Technical risk of a home savings and loan company

### 11.1 Definition

Technical risk of a home savings and loan company is subdivided into two components: new business risk and collective risk. **New business risk** is the risk of a negative impact from possible variances compared with the planned new business volume. **Collective risk** refers to the risk of a negative impact that could arise from variances between the actual and forecast performance of the collective building society operations caused by significant long-term changes in customer behavior unrelated to changes in interest rates.

BSH's business risk and reputational risk are included within the technical risk of a home savings and loan company.

### 11.2 Business background and risk strategy

Technical risk of a home savings and loan company arises in the Bank sector in connection with the business activities of **BSH**. This risk represents the entity-specific business risk of BSH. A home savings arrangement is a system in which the customer accumulates savings earmarked for a specific purpose. The customer enters into a home savings contract with fixed credit balance and loan interest rates, so that when the savings phase (which may be subsidized under statutory arrangements) is completed at a later point and a loan is allocated under the contract, they can receive a home savings loan with a fixed rate of interest. A home savings agreement is therefore a combined asset/liability product with a long maturity.

Technical risk of a home savings and loan company is closely linked with the BSH business model and cannot therefore be avoided. Against this backdrop, the **risk strategy** aims to prevent an uncontrolled increase in risk.

### 11.3 Risk factors

A variance between the actual and planned new business volume (**new business risk**) could lead to lower deposits from banks and customers over the short to medium term. Over the medium to long term, the lower level of new business could also lead to a decrease in loans and advances to banks and customers.

Variances between the actual and forecast performance of the collective building society operations caused by significant long-term changes in customer behavior unrelated to changes in interest rates (**collective risk**) could also lead to lower loans and advances to banks and customers and to lower deposits from banks and customers.

Over the medium to long term, there is a risk that a lower level of new business and change in customer behavior could lead to a fall in earnings and therefore to a decline in capital.

A higher starting rate of interest could lead to outflows in collective building society operations, thereby exacerbating the adverse impact of varied parameters in the technical risk of a home savings and loan company and increasing that risk. The causes of a potential interest-rate rise are explained in chapter VI.5.2.6.

### 11.4 Responsibility and risk management

BSH is **responsible** for managing the technical risk of a home savings and loan company within the Bank sector. This includes measuring the risk and communicating risk information to the risk management committees at BSH and to the Board of Managing Directors and Supervisory Board of BSH.

A special collective simulation, which includes the integrated effects of a (negative) change in customer behavior and a drop in new business, is used to **measure the technical risk of a home savings and loan company** on a quarterly basis. The input parameters are selected to ensure a confidence level of 99.9 percent. Due to the specifics of building society operations, effects beyond a holding period of 1 year are taken into account for the technical risk of a home savings and loan company. The results from the collective simulation for the technical risk of a home savings and loan company are fed into a long-term forecast of earnings. The variance between the actual earnings in the risk scenario and the earnings in a base forecast with the same reference date is used as a risk measure. The variance is discounted to produce a present value. The total present value of the variances

represents the technical risk of a home savings and loan company and therefore the risk capital requirement for this type of risk. **Concentrations** of this risk are most likely to arise from new business risks.

Technical risk of a home savings and loan company is **managed** in particular through a forward-looking policy for products and scales of rates and charges, and through appropriate marketing activities and sales management.

### 11.5 Risk position

As at December 31, 2024, the **risk capital requirement** for the technical risk of a home savings and loan company amounted to €719 million (December 31, 2023: €730 million) with a **limit** of €820 million (December 31, 2023: €820 million).

## 12 Business risk

### 12.1 Definition and business background

Business risk refers to the risk that financial performance is not in line with expectations, and this is not covered by other types of risk. In particular, this comprises the risk that, as a result of changes in material circumstances (for example, economic conditions, product environment, customer behavior, market competitors) or inadequate strategic positioning, corrective action cannot be taken to prevent losses.

Business risk mainly affects DZ BANK. DZ BANK's core functions as a **central institution and corporate bank** and **holding company** mean that it focuses closely on the local cooperative banks, which are its customers and owners. In this context, business risk can arise from corporate banking, retail banking, capital markets business, and transaction banking.

### 12.2 Risk strategy

The objective of the business risk strategy is to specify how business risk is to be managed, taking into account the relevant **business drivers**, and thus contribute to achieving the targets set out in the business strategy. The focus is on preventing both an unplanned increase in risk and potential losses arising from a slump in income or from increases in staff expenses or operating costs.

The following **instruments** are used to support the attainment of targets:

- Forward-looking assessment of success factors and specification of targets as part of the strategic planning process
- Groupwide coordination of risk management, capital allocation, and corporate strategy, together with the leveraging of synergies
- Setting of limits and monitoring

### 12.3 Risk factors

#### 12.3.1 General risk factors for business risk

Over the next few years, the DZ BANK Group is likely to continue to face **increased costs**, and thus reduced profits, in connection with implementing the requirements resulting from **regulatory legislative initiatives**.

Fiercer **competition in retail and corporate banking based on pricing and terms** could give rise to margins that are economically unattractive for DZ BANK or that do not adequately cover the risk arising from the corresponding transactions.

#### 12.3.2 Sustainability-related risk factors for business risk

Transition risks can increase business risk through the following political initiatives, technological innovations, and changes in behavior:

- Actions in connection with the change in energy policy, such as the coal phase-out and increases in carbon emission prices
- The development of alternative drive systems to reduce the use of fossil fuels in the transportation sector, especially switching away from the internal combustion engine
- Enhanced requirements for reducing the consumption of resources such as energy, water, and commodities and improving energy efficiency
- The use of energy-saving technologies
- Changed consumer behavior as part of a growing awareness of the negative impact of consumption on the climate

These developments could lead to rising costs and falling customer demand, and thus to a deterioration in the financial performance of DZ BANK and the DZ BANK Group.

#### 12.4 Organization and responsibility

The management of business risk is a primary responsibility of the **Board of Managing Directors** and is carried out in consultation with the senior management of the material subsidiaries and the heads of the DZ BANK divisions involved. Group management is integrated into a committee structure, headed by the **Group Coordination Committee**. The Group Finance division supports the Board of Managing Directors as part of its role in supervising the activities of the subsidiaries. Details of the committee structure and the supervision of subsidiaries can be found in chapter I.2.2 of the (group) management report.

#### 12.5 Risk management

The management of business risk is closely linked with the tools used in the **strategic planning process**. It is based on setting targets for the subsidiaries involved in management and for the divisions of DZ BANK. The strategic planning process is described in chapter I.2.4 of the (group) management report.

To identify regulatory initiatives with a material impact on the DZ BANK Group and its entities, a **centralized regulation management office** has been set up at DZ BANK. This office establishes direct contact with the relevant units at DZ BANK and the other management units, and organizes regular bank-wide and groupwide dialogue on identified and new strategic regulatory initiatives. It also uses a 'regulatory map' to report to the relevant steering committees, the Board of Managing Directors, and the Supervisory Board.

Business risk in the Bank sector is **quantified** with a confidence level of 99.9 percent using a risk model operated by DZ BANK and centralized data at the level of the DZ BANK Group. The risk model is based on an earnings-at-risk approach with due regard to the definition of economic available internal capital. A Monte Carlo simulation is used to model a probability distribution for the earnings relevant to business risk, which comprise selected income and expense items from the IFRS income statement, with an analysis period of 1 year. This distribution produces the risk capital requirement in the amount of the modeled actual loss.

The broad diversification and sustainability of the business models used by the entities in the Bank sector are intended to prevent excessive **concentrations of income**. As part of a groupwide risk concentration analysis, which itself forms part of the risk inventory check, a review is carried out annually, and on an ad hoc basis as required, to identify concentrations of income and assess their materiality. This aims to ensure that income concentrations are appropriately taken into account in risk-bearing capacity.

## 12.6 Risk position

As at December 31, 2024, the **risk capital requirements** for business risk both in the **Bank sector** and at **DZ BANK** amounted to €0 million. As at December 31, 2023, the risk capital requirements had amounted to €363 million and €335 million respectively. The decline in risk to zero was because the planning assumptions concerning parameters with business risk implications had been raised compared with the end of 2023.

The **limits** as at the reporting date were €500 million in the **Bank sector** (December 31, 2023: €450 million) and €425 million at **DZ BANK** (December 31, 2023: €410 million). The limits were increased in 2024 due to the high level of limit utilization as at December 31, 2023 and in expectation of a volatile earnings performance.

Reputational risk is included in the figures shown.

## 13 Reputational risk

### 13.1 Definition and business background

Reputational risk refers to the risk of losses from events that damage confidence, mainly among customers (including the cooperative banks), shareholders, employees, the labor market, the general public, and the supervisory authorities, in the entities in the Bank sector or in the products and services that they offer. Reputational risk can arise either as an independent risk (primary reputational risk) or as an indirect or direct consequence of other types of risk (secondary reputational risk).

Reputational risk can arise in connection with any of the business activities in the entities within the Bank sector.

### 13.2 Risk strategy

Reputational risk is incorporated into the risk strategy by pursuing the following **objectives**:

- Avoiding loss resulting from reputation-damaging incidents by taking preventive action
- Mitigating reputational risk by taking preventive and responsive action
- Raising awareness of (potential) reputational risk within the Bank sector, e.g. by defining the people responsible for risk and establishing a sector-wide reporting system and set of rules for reputational risk

These objectives are applicable both at the Bank sector level and in the management units. The management units are responsible for complying with the rules and for deciding what suitable preventive and responsive action to take.

The reputational risk strategy is based on the **business strategies** in each management unit and to this end is reviewed at least once a year and adjusted as necessary.

### 13.3 Risk factors

If the Bank sector as a whole or the individual management units acquire a negative reputation, there is a risk that existing or potential customers will be unsettled with the result that existing **business relationships** might be terminated or it might not be possible to carry out planned transactions. There is also a risk that it will no longer be possible to guarantee the backing of **stakeholders** – such as shareholders, partners in the Cooperative Financial Network, and employees – necessary to conduct business operations. The possibility cannot be ruled out either that R+V will be affected if entities in the Bank sector have a negative reputation.

Reputational risk is particularly affected by **sustainability-related risk factors** in the form of transition risks, social risks, and corporate governance risks. If such sustainability-related risks materialize, this can lead to increased reputational risk. The effect can spread both indirectly via customers or products and directly via the entities' own processes or business activities.

The DZ BANK Group may suffer reputational damage if stakeholders of the entities in the Bank sector regard the DZ BANK Group's approach to sustainability matters as inappropriate, in particular if they deem existing or future products or current or proposed business relationships to have an adverse impact on the climate or environment.

Reputational risk could also increase if stakeholders believe that entities in the Bank sector are not acting sustainably, either actively or passively. The reputational damage may lead to a deterioration in the financial position and financial performance of the DZ BANK Group through a variety of channels of impact, such as a reduction in new business and existing business.

### 13.4 Risk management

Each management unit is responsible for managing its reputational risk and must comply with the requirements laid down in the set of rules for reputational risk. The principle of **decentralized** responsibility applies equally within the management units. Based on this approach, responsibility for managing reputational risk lies with each division with the involvement of other functions such as communications & marketing, corporate security, and compliance.

Reputational risk in the Bank sector is taken into account within **business risk** and is therefore implicitly included in the measurement of risk and assessment of capital adequacy. At BSH, reputational risk is measured and the capital requirement determined mainly as part of the technical risk of a home savings and loan company.

In addition, the risk that obtaining funding may become more difficult as a consequence of reputational damage is specifically taken into account in liquidity risk management.

Reputational risk control follows a **stakeholder approach** that is based on the principle that the material stakeholders' perception of the DZ BANK Group is the critical metric for reputational risk. The stakeholders' responses are evaluated in the context of ongoing reporting using a mood barometer, particularly if a reputation-damaging incident occurs. This is underpinned by indicators for each stakeholder that implicitly and explicitly take account of **sustainability matters**.

## 14 Operational risk

### 14.1 Definition

Operational risk refers to the risk of losses from human behavior, technological failure, weaknesses in process or project management, or external events.

In the reporting year, the following subtypes of operational risk were material for the Bank sector:

- Compliance risk including compliance conduct risk
- Legal risk
- Information risk including ICT risk
- Security risk
- Outsourcing risk
- Project risk

Other subtypes of operational risk that are not material when viewed in isolation are categorized as 'Other operational risk'. This category is used to cover operational risks that cannot be allocated to the other subtypes of operational risk and – measured on the basis of risk profile – are of lesser importance.

### 14.2 Business background and risk strategy

Operational risk can arise in any division of the entities in the Bank sector. DZ BANK as well as DZ HYP and UMH are particularly subject to operational risk.

The management units aim to manage operational risk efficiently. They apply the following principles:

- Reinforce risk awareness
- Handle operational risk openly and largely without penalties
- Avoid, reduce, transfer, or accept risk as optional courses of action
- Manage operational risk on a decentralized basis but within the limits set out in the framework for operational risk
- Ensure that the impact of corporate policy decisions on operational risk is taken into account

### 14.3 Organization and responsibility

Each management unit is responsible for managing its operational risk. The principle of **decentralized** responsibility applies equally within the management units.

One of the purposes of the **framework for operational risk** is to harmonize risk management throughout the sector. The sector-wide coordinated approach to operational risk is also managed by a **committee** assigned to the Group Risk Control working group.

A **DZ BANK** organizational unit responsible for controlling operational risk located within the Group Risk Control & Services division develops the management and control methods based on regulatory requirements and business needs applicable to the Bank sector. This organizational unit ensures that operational risk is monitored independently and is responsible for central reporting on operational risk in the Bank sector and at DZ BANK. Similar organizational units are also in place at the other material entities in the **Bank sector**.

**Specialist divisions with central risk management functions** are also assigned tasks relating to the management of operational risk. As part of their overarching responsibility, these specialist divisions also perform an advisory and guiding function for the matters within their remit in the relevant entities of the Bank sector.

Because operational risk can affect all divisions in the management units, **local operational risk coordinators** are located in each division and they liaise with central Risk Controlling.

## 14.4 Central risk management

### 14.4.1 Identifying operational risk

The main tools used to manage and control operational risk in the DZ BANK Group's Bank sector are described below.

#### Loss database

The collation of loss data in a central database allows the Bank sector to identify, analyze, and evaluate loss events, highlighting patterns, trends, and concentrations of operational risk. In particular, data is recorded for operational risk that materializes and results in a gross loss of €1,000 or more.

#### Risk self-assessment

All management units assess operational risk using a scenario-supported risk self-assessment process in order to identify and evaluate all material operational risks and ensure maximum possible transparency regarding the risk position. The main potential risks for all first-level event categories as defined by the CRR are calculated and described using risk scenarios. The scenarios are also designed to enable risk concentrations to be identified.

#### Risk indicators

In addition to the loss database and risk self-assessment, risk indicators are intended to enable risk trends and concentrations to be identified at an early stage and to detect weaknesses in business processes. A system of warning lights is used to indicate risk situations based on specified threshold values. Risk indicators within the Bank sector are collected systematically and regularly.

#### 14.4.2 Measurement of operational risk

An **internal portfolio model** that takes into account net loss data and the results from the risk self-assessments is used to determine the risk capital requirement for operational risk in the Bank sector. Within the portfolio model, the distributions of loss frequency and amount are brought together in a Monte Carlo simulation. This determines potential losses that could arise over a period of 1 year with a confidence level of 99.9 percent. The results from the model, combined with the tools used to identify risk, are used to manage operational risk centrally. Alongside the economic risk capital requirement, the model also calculates specific risk contributions for each management unit.

In addition, **risk concentrations** are identified by using separate model-based analyses, taking into account event categories and areas of business specified by regulatory requirements. These risk concentrations could occur in the different areas of business within the entities of the Bank sector.

In addition, a simplified procedure based on the allocation mechanism in the capital model is used to identify **risk factors**. The subsequent analysis is carried out for all standard scenarios. The list of standard scenarios contains a list of general scenario descriptions that are relevant to operational risk in the Bank sector entities.

#### 14.4.3 Limiting operational risk

The limits for operational risk are used as the basis for central monitoring of the risk capital requirement at the Bank sector level. The risk capital requirement for the Bank sector is broken down into risk contributions for each management unit using a risk-sensitive allocation procedure so that the management units in the Bank sector can be monitored centrally. These risk contributions are then monitored centrally using limits for each management unit.

#### 14.4.4 Mitigating and avoiding operational risk

Continual improvement of business processes and control processes is one of the methods used with the aim of **mitigating** operational risk. The transfer of risk by means of insurance or outsourcing as permitted by liability regulations provides further protection.

Operational risk is **avoided**, for example, by rejecting products that can be identified during the new product process as entailing too much risk.

#### 14.5 Consideration of sustainability risks

There is a risk that third parties could assert claims due to **transition risks** or that negative climate-related and environmental events could cause shortages in the supply of energy/electricity to entities in the Bank sector.

**Corporate governance risk** can also lead to operational risk. This would be the case, for example, if inadequate systems for control and risk management create conditions conducive to prohibited or criminal acts that could lead to financial losses.

The instruments used to identify operational risk – such as the loss database, risk self-assessment, and risk indicators – also incorporate sustainability matters through the use of an ESG label in the operational risk database. This ensures that sustainability-driven operational risks are managed and monitored.

To expand the management of operational risks driven by ESG factors, an ESG-specific label is currently being introduced as part of the aforementioned management tools. This will enable reliable statements to be made on the basis of expert assessments – by the organizational units responsible for risk management – that indicate the impact of sustainability risk factors on operational risk.

## 14.6 Operational risk subtypes

### 14.6.1 Compliance risk including compliance conduct risk

#### Risk factors

Compliance risk could arise if the compliance and risk management systems implemented in the Bank sector entities prove insufficient to completely prevent or detect breaches of obligations to third parties. Such obligations include legal requirements (laws, regulations) as well as both internal and external agreements. Examples are misuse of confidential information, failure to comply with sanctions or embargoes, data protection infringements, and support – or inadequate preventive measures – for money laundering, terrorist financing, or other criminal offenses. Wrongdoing by employees (conduct risk) also forms part of compliance risk.

#### Effects if risk materializes

Violations of internal rules or legal provisions could render contracts null and void or have legal implications for the entity concerned, for the members of its decision-making bodies, or for its employees. They may give rise, for example, to fines, penalties, retrospective tax payments, or claims for damages by third parties. The reputation of individual entities in the Bank sector and the DZ BANK Group as a whole could also suffer as a result. These effects could reduce the Bank sector entities' appeal as partners in business transactions or as employers and consequently lead to losses in value.

#### Risk management

The basic principles for managing compliance risk applicable to the entities in the DZ BANK Group are described in chapter VI.3.9. The data protection measures in place and the code of conduct are also explained in the same chapter. Measures such as the strict separation of functions, the requirement for verification by a second person, restrictions on IT and building access authorizations, and a sustainability-oriented remuneration system are designed to contain risk, in particular the risk of internal fraud.

### 14.6.2 Legal risk

#### Risk factors

Legal risk can arise from legal violations or incorrect application of legal provisions. Legal risk can also arise from changes to the legal position (laws or judgments by the courts) relating to transactions completed in the past.

#### Effects if risk materializes

If legal risk were to materialize, this could result in official sanctions or the need to pay damages. It is also possible that existing contractual rights could be lost retrospectively or could otherwise not be enforced for legal reasons. These effects could lead to losses and reduce the Bank sector entities' appeal as partners in business transactions.

#### Risk management

The entities in the Bank sector pursue a strategy of avoiding legal risk. Identified risks are limited and mitigated by means of legal or procedural organizational measures. If the legal position is uncertain, the management units generally adopt a defensive approach.

In the entities of the Bank sector, responsibility for managing legal disputes normally lies with their organizational units responsible for dealing with legal issues. These units continuously monitor proposed legislation and regulatory requirements that are legally relevant, as well as developments in decisions by the courts. Their responsibilities include reviewing and assessing circumstances from a legal perspective and also coordinating any legal proceedings. The latter consists of both defending claims pursued against the entities in the Bank sector and enforcing claims by the management units against third parties. If any legal risk is identified, the management unit concerned assesses the risk parameters in terms of their probability of occurrence and possible impact.

The Legal divisions in the Bank sector entities also submit reports on risk-related issues to the member(s) of the Board of Managing Directors with relevant responsibility, independently of the established regular reports on cases pending before the courts.

#### Accounting for legal risk

In accordance with the relevant (group) accounting rules, loss allowances or provisions are recognized to account for potential losses from legal risk. Disclosures covering the provisions recognized for risks arising from ongoing legal disputes and pre-litigation risks – in particular in connection with capital market, home savings, and credit products – and for risks arising from general banking operations are included in note 66 of the notes to the consolidated financial statements under 'Other provisions'.

### 14.6.3 Information risk including ICT risk

#### Risk factors

Information risk arises from a failure to maintain the confidentiality, integrity, availability, or authenticity of information assets. If the risk is in connection with the use of information or communication technology (data media), it is referred to as ICT risk. This also includes cyber risk.

#### Effects if risk materializes

The processes necessary to conduct operating activities could be impaired if the confidentiality, integrity, availability, and authenticity of information assets is not maintained or if IT systems malfunction or break down. This could, in turn, inflict reputational damage and lead to losses from operational risk.

#### Risk management

The basic principles for managing information security applicable to the entities in the DZ BANK Group are described in chapter VI.3.10. The nature of these principles is described below.

Practically all business processes are carried out electronically using appropriate IT systems. The supporting IT systems are networked with each other and are operationally interdependent.

Processes in the IT divisions of the entities in the Bank sector are designed with risk issues in mind and are monitored using a variety of control activities in order to ensure that information risk is appropriately managed. The starting point is to determine what threats exist in certain aspects of IT and what risk scenarios they give rise to. Detailed requirements for a level of security can then be specified. These requirements determine the extent to which checks need to be carried out and are intended to ensure that all activities are conducted in compliance with the previously defined security level.

The IT processes are designed, through comprehensive physical and logical precautionary measures, to guarantee the security of information assets and IT systems and to ensure that day-to-day operations are maintained. Measures used by the Bank sector to counter the risk of a partial or complete loss of IT systems include segregated data processing centers in which the data and systems are mirrored, special access security, fire control systems, and an uninterruptible power supply supported by emergency power generators. Regular exercises are carried out to test defined restart procedures to be used in emergency or crisis situations with the aim of checking the efficacy of these procedures. Data is backed up and held within highly secure environments in different buildings.

Further details on information security management can be found in chapter VI.3.10.

DZ BANK's risk assessment methodology for information risk is made available centrally by information security management and applied locally by the managers responsible for the various IT systems using tool-supported control processes. All variances identified in these processes are assessed from the perspective of the associated risks. All information risks classified as material are included in quarterly information security reports to the Board of Managing Directors.

#### 14.6.4 Security risk

##### Risk factors

Security risk can arise from inadequate protection of individuals, premises, assets, or time-critical processes. Examples are epidemics or pandemics resulting from the spread of pathogens over a huge area, restrictions on access to workplaces caused by natural disasters or demonstrations, or limitations on the use of resources because of a power outage or other interruption to energy supply. Climate change could lead to more frequent and more severe natural disasters.

##### Effects if risk materializes

If security risk were to materialize, this could lead to a range of problems from staff shortages to restrictions, or even the loss, of the use of buildings and resources such as IT systems and third-party services. In such eventualities, it is possible that mission-critical processes could not be carried out or could not be carried out on time, which could lead to loss of business and/or compensation claims from customers. Furthermore, such scenarios could also have a negative impact on reputation.

##### Risk management

The relevant organizational units in the management units prepare requirements for the protection of time-critical business processes, people, premises, and other assets. These requirements are implemented by the departments responsible in each case. In all relevant management units, a comprehensive business continuity management system (with business continuity plans covering time-critical activities and processes) has been established to ensure the continuation of business in the event of process disruption or IT system breakdown. These business continuity plans are regularly reviewed and tested to ensure they are fully functional.

Further details on business continuity management can be found in chapter VI.3.10.

#### 14.6.5 Outsourcing risk

##### Risk factors

The entities in the Bank sector have outsourced activities and processes to third-party service providers to a considerable extent. Outsourcing risk can arise if the service provider fails to comply with the strategic principles established by the management units or the related operational requirements when carrying out the outsourced activities.

The reasons may be as follows:

- Failure of the relevant service provider to comply with regulatory requirements
- Lack of transparency regarding the delivery of the services and little opportunity for control over outsourcing outside the home market
- Highly complex outsourced processes that are far from a standard service
- Potential loss of expertise because of outsourcing of core competencies or knowledge processes
- Defective performance caused by service provider failures or the loss of service provider
- Inadequate management or monitoring of service providers, in particular as a result of a lack of transparency regarding service delivery

##### Effects if risk materializes

If these risk factors were to materialize, they could lead to a loss of business and to claims for damages from customers. They could also result in a negative impact on reputation.

#### Risk management

The basic principles for managing outsourcing applicable to the entities in the DZ BANK Group are described in chapter VI.3.11.

The process of assessing the risk and determining the degree to which an outsourcing arrangement is material is carried out as part of the analysis of outsourcing risk by the division responsible for the outsourcing with the involvement of a number of reviewing and control units, including compliance, information security, and business continuity management, and in consultation with the local coordinators for operational risk. Internal audit is also involved as part of its auditing activities.

At DZ BANK, external service providers are managed by the department responsible for the outsourcing in accordance with the currently applicable policy for external procurement management. Service meetings are regularly held with service providers to facilitate communication and coordinate the IT services and other services to be provided by the third parties concerned. Compliance with contractually specified service level agreements is monitored, for example, by means of status reports and uptime statistics. The external service providers submit regular reports in which they evaluate and confirm the effectiveness of the general controls and procedures.

Business continuity plans, specific contractual liability provisions, and exit strategies are some of the approaches used to reduce outsourcing risk.

#### 14.6.6 Project risk

##### Risk factors

Project risk refers to the risk that project requirements will not be completed on schedule. Project risk could arise, for example, from the inadequate clarification of project targets or orders, from deficiencies in subsequent implementation, from communication shortcomings both inside and outside the project, or from unexpected changes in the general parameters applicable to a project.

##### Effects if risk materializes

If project risk were to materialize, this could mean that the implementation of the project could require exceptional additional funds in excess of the budget (primary project risk). It could also give rise to further costs attributable to the failure to complete project requirements on schedule (secondary project risk). Examples of such costs are additional costs or reduced earnings in the line organization, impairment losses on capital investment related to the project, and penalty payments.

##### Risk management

In accordance with the statutory requirements that need to be observed, the project organization serves as the framework for implementing projects. The projects as a whole are broken down into portfolios with shared characteristics to enable the projects to be managed in a focused, efficient manner. A committee structure with defined roles and responsibilities is designed to look after the detailed management of the portfolios and the projects assigned to them.

The management of project risk is an ongoing process over the lifecycle of a project and is a component of project management and project portfolio management. Accepting a project risk is a valid option if the project customer believes that the measures to eliminate, reduce, or mitigate the risk are not reasonable in relation to their expected benefit.

#### 14.7 Heightened sanction and embargo requirements resulting from geopolitical tensions

The monitoring of sanctions necessitates transaction checks that entail an increased workload. This may result, for example, in delays to the execution of transactions or, if applicable, penalty interest payments for trading that involves securities subject to sanctions. The resulting operational risks are factored in by means of the hypothetical risk scenarios 'breaches of sanctions and embargoes' and 'incorrect execution of transactions and processes'.

## 14.8 Losses

Losses from operational risk do not follow a consistent pattern. The overall risk profile can be seen from the total losses incurred over the long term and is shaped by a small number of large losses. Over the course of time, regular fluctuations are evident in the pattern of losses as the frequency of relatively large losses in each individual case is very low. Presenting the change in losses meaningfully therefore requires a sufficiently long and unchanging time horizon for reporting purposes. The data is selected from the loss history for the past four quarters and on the basis of the date on which the expense is recognized in the income statement.

The past four quarters – that is, the period from January 1 to December 31, 2024 – represent the relevant reporting period for an analysis of net losses. Fig. VI.39 shows the internal net losses from loss events reported in this period, classified by operational risk subtype, and a comparison with their long-term mean.

In 2024, the highest losses were attributable to **other operational risk**. The main reason for the losses in other operational risk was a procedural error that was made when posting to accounts and switching over accounts. Based on the long-term mean, internal losses both in the **Bank sector** and at **DZ BANK** were dominated by **compliance risk**, **legal risk**, and **other operational risk**.

All in all, the losses in the past four quarters were lower than in the prior period. Losses did not reach a critical level relative to the expected loss from operational risk at any point during 2024, either in the Bank sector or at DZ BANK.

FIG. VI.39 – BANK SECTOR: NET LOSSES<sup>1</sup> BY OPERATIONAL RISK SUBTYPE

| € million                           | Bank sector                  |                             | DZ BANK                      |                             |
|-------------------------------------|------------------------------|-----------------------------|------------------------------|-----------------------------|
|                                     | Jan. 1. 2024 – Dec. 31, 2024 | Long-term mean <sup>2</sup> | Jan. 1. 2024 – Dec. 31, 2024 | Long-term mean <sup>2</sup> |
| Compliance risk                     | 1                            | 22                          | –                            | 14                          |
| Legal risk                          | 3                            | 21                          | –                            | 12                          |
| Information risk including ICT risk | 1                            | 3                           | 1                            | 1                           |
| Security risk                       | 2                            | 2                           | 1                            | 1                           |
| Outsourcing risk                    | 1                            | 1                           | –                            | –                           |
| Project risk                        | –                            | 1                           | –                            | –                           |
| Other operational risk              | 22                           | 9                           | 9                            | 5                           |
| <b>Total<sup>3</sup></b>            | <b>29</b>                    | <b>58</b>                   | <b>11</b>                    | <b>33</b>                   |

<sup>1</sup> Internal losses. Operational losses related to credit risk are not included in this breakdown.

<sup>2</sup> The long-term mean is derived from loss data recorded since 2006.

<sup>3</sup> Losses that are allocable to more than one operational risk subtype are split equally between the relevant subtypes.

## 14.9 Risk position

As at December 31, 2024, the capital requirement for operational risk at **Bank sector** level was calculated at €1,041 million (December 31, 2023: €978 million) with a **limit** of €1,157 million (December 31, 2023: €1,148 million).

As at December 31, 2024, the corresponding requirement at **DZ BANK** was €582 million (December 31, 2023: €550 million). The **limit** as at December 31, 2024 was €652 million (December 31, 2023: €651 million).

Fig. VI.40 shows the structure of the risk profile for operational risk in the Bank sector and at DZ BANK based on **risk subtypes**.

FIG. VI.40 – BANK SECTOR: DISTRIBUTION OF RISK CAPITAL REQUIREMENT FOR OPERATIONAL RISK, BY RISK SUBTYPE<sup>1</sup>

| Percent                             | Bank sector   |               | DZ BANK       |               |
|-------------------------------------|---------------|---------------|---------------|---------------|
|                                     | Dec. 31, 2024 | Dec. 31, 2023 | Dec. 31, 2024 | Dec. 31, 2023 |
| Compliance risk                     | 30.4          | 30.4          | 13.4          | 13.4          |
| Legal risk                          | 19.1          | 19.4          | 8.2           | 8.4           |
| Information risk including ICT risk | 16.8          | 16.9          | 6.0           | 6.1           |
| Security risk                       | 5.0           | 5.0           | 1.9           | 1.8           |
| Outsourcing risk                    | 6.0           | 5.9           | 2.3           | 2.3           |
| Project risk                        | 6.3           | 6.3           | 2.6           | 2.6           |
| Other operational risk              | 16.4          | 16.0          | 8.5           | 8.5           |

<sup>1</sup> Proportion of the Bank sector's total operational risk capital requirement attributable to each operational risk subtype.

The distribution of the risk capital requirement among the operational risk subtypes in the Bank sector and at DZ BANK remained largely unchanged as at December 31, 2024 compared with the end of the previous year. **Compliance risk** and **legal risk** accounted for the most significant proportions of the risk capital requirement. A large proportion of the risk capital requirement for these two risk subtypes was determined by the recorded losses and by the hypothetical risk scenarios for changes to case law and for breaches of sanctions and embargoes.

## Insurance sector

### 15 Basic principles of risk management in the Insurance sector

#### 15.1 Risk strategy

The principles of risk management in the Insurance sector are based on the risk strategy of the DZ BANK Group for the Insurance sector, which is closely interlinked with the business strategy. Under its risk strategy, R+V aims to assume risk on a conscious, calculated basis within the constraints of the specified risk appetite.

**Life actuarial risk** is managed with the objectives of holding a broadly diversified product portfolio and of developing existing products while designing new ones. Pension, endowment and risk insurance, working life and semi-retirement products, index-linked products, and unit-linked products are underwritten in order to diversify the life insurance and pension provision portfolios.

The objectives of managing **health actuarial risk** are a risk-conscious underwriting policy, cost/benefit management, the development of existing products, and the design of new products.

The management of **non-life actuarial risk in direct business** aims to optimize portfolios in terms of risk and reward. R+V focuses on business in Germany, offering a full range of non-life insurance products.

In **inward non-life reinsurance business**, R+V also aims to achieve a broad balance of risk across all sectors, diversify geographically around the globe, and optimize the portfolio from a risk/reward perspective.

The management of **market risk** is connected with the following fundamental objectives of risk policy: optimizing the economic risk/return profile, ensuring required returns on investments taking into account individual risk-bearing capacities, the liquidity situation, achieving defined minimum investment returns in stress scenarios, and ensuring consistent earnings. Investment composition is managed in operational terms on the basis of the following criteria: definition of minimum or average credit ratings, durations, transaction volumes,

the proportion of assets at risk, the proportion of foreign currency, sustainability criteria, and liquidity requirements.

In line with the risk strategy for **counterparty default risk**, R+V aims to maintain a high minimum or average credit rating for its portfolios, avoid concentrations of issuers at portfolio level, and comply with the limits that have been set for counterparties and debtors of insurance and reinsurance companies.

The risk strategy for **operational risk** aims to further raise awareness of operational risk.

The objective of the **reputational risk strategy** is to promote the image of the R+V brand with due regard to the need for transparency and credibility.

## 15.2 Organization and responsibility

As specified in the own risk and solvency assessment (ORSA), the risk management process encompasses all the steps involved in identifying, analyzing, assessing, managing, monitoring, reporting, and communicating risk. Risk-bearing capacity is reviewed and measured at least once a quarter and the process includes a review of binding key performance indicators and threshold values. Corrective action must be assessed and, where necessary, initiated if a specified index value is exceeded. Risk-bearing capacity and all material risks are then finally evaluated each quarter by the Risk Committee.

## 16 Actuarial risk

### 16.1 Definition and business background

#### 16.1.1 Definition

Actuarial risk is the risk that the actual cost of claims and benefits deviates from the expected cost as a result of chance, error, or change. It is broken down into the following categories defined by Solvency II:

- Life actuarial risk
- Health actuarial risk
- Non-life actuarial risk

#### Life actuarial risk

Life actuarial risk refers to the risk arising from the assumption of life insurance obligations, in relation to the risks covered and the processes used in the conduct of this business. The following subtypes of life actuarial risk are material for R+V:

- **Mortality risk** describes the risk of loss or an adverse change in the value of insurance liabilities, resulting from changes in the level, trend, or volatility of mortality rates, where an increase in the mortality rate leads to an increase in the value of insurance liabilities.
- **Longevity risk** describes the risk of loss or an adverse change in the value of insurance liabilities, resulting from changes in the level, trend, or volatility of mortality rates, where a decrease in the mortality rate leads to an increase in the value of insurance liabilities.
- **Lapse risk** describes the risk of loss or an adverse change in the value of insurance liabilities, resulting from changes in the level or volatility of the rates of contract lapses, cancellations, renewals, and surrenders.
- **Life expense risk** describes the risk of loss or an adverse change in the value of insurance liabilities, resulting from changes in the level, trend, or volatility of the expenses incurred in servicing insurance or reinsurance contracts.

#### Health actuarial risk

Health actuarial risk refers to the risk arising from the assumption of health and casualty insurance obligations, in relation to the risks covered and the processes used in the conduct of this business.

#### Non-life actuarial risk

Non-life actuarial risk refers to the risk arising from the assumption of non-life insurance obligations, in relation to the risks covered and the processes used in the conduct of this business. The following subtypes of non-life actuarial risk are material for R+V:

- **Premium and reserve risk** describes the risk of loss or an adverse change in the value of insurance liabilities, resulting from fluctuations in the timing, frequency, and severity of insured events, and in the timing and amount of claim settlements.
- **Non-life catastrophe risk** describes the risk of loss or an adverse change in the value of insurance liabilities, resulting from the significant uncertainty of pricing and assumptions when recognizing provisions related to extreme or unusual events.

#### 16.1.2 Business background

In the DZ BANK Group, considerable actuarial risk arises from the business activities of R+V. The risk arises from the direct life insurance and health insurance business, the direct non-life insurance business, and the inward reinsurance business.

### 16.2 Risk factors

#### 16.2.1 General risk factors for actuarial risk

In the case of long-term products, which constitute the bulk of R+V's **direct life insurance business**, there is a risk of negative variances over the term of the contracts compared with calculation assumptions because the contract terms are long. The relevant risk factors include changes in life expectancy, increasing rates of disability-morbidity, disproportionately sharp cost increases, and a rise in contract lapses. If the actual trends in life expectancy, disability-morbidity, costs, or contract lapses vary from the calculation assumptions, there is a risk over the medium to long term that the gross profit generated from life insurance will decline.

Unexpected movements in the interest-rate market are further risk factors for **life actuarial risk**. In the event of an unexpected interest-rate rise, there would be a risk that policyholders could increasingly allow existing life insurance contracts to lapse and that new business declines.

In **health insurance** at R+V, which accounts for a substantial proportion of health actuarial risk, there is a risk of higher claims caused by the behavior of the policyholders and service providers. Subject to certain legal requirements, there is a possibility of adjusting the premiums in the health insurance business, a process in which all actuarial assumptions can be reviewed and modified. Significant premium adjustments could have a negative impact on future new business if rate scales lose their appeal because of high premiums. The number of lapses in the portfolio could also increase as a result.

R+V's **direct non-life insurance and inward non-life reinsurance business** involves the provision of cover for a range of disasters, for example. This includes both natural disasters, such as earthquakes, storms, and floods, and man-made disasters. These events cannot be predicted. Generally speaking, there is both the risk of particularly significant individual loss events and also the risk of a large number of loss events that are each not necessarily significant in themselves. In any one year, the actual impact from the size and frequency of losses could therefore exceed the forecast impact. Inflationary effects represent a cost driver for claims incurred because, for example, higher prices for procuring commodities and other items can result in higher claims settlement expenses. This may lead to adjustments to premiums.

Cyber risk is becoming increasingly significant within the underwriting business as a consequence of ongoing digitalization. There is a risk that cyber risk may not be comprehensively set out, or may not be mentioned at all, in insurance terms and conditions, or that it may not be expressly included or excluded (referred to as silent cyber risk).

### 16.2.2 Sustainability-related risk factors for actuarial risk

Physical risks such as environmental pollution and climate change represent sustainability-related risk factors in respect of **life and health actuarial risks** because they could have a negative impact on the health of policyholders and increase the number of claim events.

Climate change represents a sustainability-related risk factor for **catastrophe risk** as part of non-life actuarial risk in connection with the occurrence of natural disasters. It is reasonable to expect that climate change will lead to an increase in weather-related natural disasters.

## 16.3 Management of life actuarial risk

### 16.3.1 Risk measurement

The **overall solvency requirement** for actuarial risk is determined in accordance with the standard formula in Solvency II over a period of 1 year with a confidence level of 99.5 percent.

The risk for insurance contracts subject to **mortality risk** is modeled with the assumption of a 15 percent permanent increase in mortality.

The risk for insurance contracts subject to **longevity risk** is modeled with the assumption of a 20 percent permanent increase in longevity.

The risk for insurance contracts subject to **lapse risk** is modeled for the following scenarios: for an increase in lapses, a 50 percent rise in the lapse rate; for a decrease in lapses, a 50 percent reduction in the lapse rate; for a mass lapse event, lapse of 40 percent of the contracts.

The overall solvency requirement for **life expense risk** is based on the following stress scenarios: a permanent 10 percent rise in the costs reflected in the measurement of the insurance liabilities and an increase of 1 percentage point in the cost inflation rate.

### 16.3.2 Risk management in direct life insurance business

Actuarial risk is taken into account by carrying out a prudent cost calculation while products are still in development. This applies to the development of existing products as well as the design of new types of insurance. Safety margins are included in the actuarial assumptions to achieve this. The assumptions are structured in such a way that they not only withstand the current risk situation, but should also accommodate potential changes in the risk position. Actuarial control systems are used to decide whether the cost calculation for future new business needs to be changed. The calculation is also adjusted on an ongoing basis in line with the latest actuarial findings. The appointed actuary carries out reviews as part of product development and during the course of the term of contracts to verify that the actuarial assumptions used are appropriate. Risk management in direct life insurance business also encompasses protection in the event of occupational incapacity. The following main measures are taken to prevent a concentration of risks in the portfolio.

Before contracts are signed, extensive risk reviews are carried out to limit **mortality risk**. In general, risk is only assumed in compliance with fixed underwriting guidelines. High levels of individual or cumulative risk are limited by reinsurance.

Generally speaking, the risk is mitigated if the insured risks are diversified. For example, an increase in mortality has an adverse impact on endowment life and risk insurance policies, but at the same time has a positive impact on the **longevity risk** associated with pension insurance.

Cost control tools are used to manage **life expense risk**.

**Lapse risk** is mitigated by structuring life insurance contracts to provide maximum flexibility should policyholders' circumstances change. A range of different options during the term of an insurance contract

enables customers to maintain their contract instead of canceling it. Appropriate design of policyholder participation features and, in particular, the final bonus also counteracts lapse risk. In addition, advance notice of **policyholder participation features** in the form of declarations of future bonuses is also a key instrument with which to reduce actuarial risk relating to life insurance.

## 16.4 Management of health actuarial risk

### 16.4.1 Risk measurement

The **overall solvency requirement** for actuarial risk is determined in accordance with the standard formula in Solvency II over a period of 1 year with a confidence level of 99.5 percent. Health actuarial risk is calculated by combining the capital requirements for the subcategories 'similar to life techniques, health actuarial risk' (risk on health insurance pursued on a similar technical basis to that of life insurance), 'non-similar to life techniques, health actuarial risk' (risk on health insurance pursued on a similar technical basis to that of non-life insurance), and 'health catastrophe risk'.

The methods described in the chapters on life actuarial risk (chapter VI.16.3) and non-life actuarial risk (chapter VI.16.5) are used to measure risk in the subcategories.

Health actuarial risk also includes significant parts of the group's casualty insurance business as well as its health and occupational disability insurance business.

### 16.4.2 Risk management in health and casualty insurance

#### Risk management in health insurance business

In the health insurance business, the Insurance sector aims to manage actuarial risk by means of an **underwriting policy**, the features of which are underwriting guidelines and selection of risk, and management of benefits and costs. The risk exposure in the case of large individual risks may be limited by taking out appropriate reinsurance. In many of the health insurance rate scales, deductibles are used to control the extent of claims. Provisions are recognized to ensure that all benefit obligations under insurance contracts can be met. The appointed actuary carries out monitoring as part of product development and over the course of time to verify that the actuarial assumptions used are appropriate.

In accordance with VAG provisions, R+V carries out an annual comparison of its calculations with the insurance benefits it is required to pay. If this comparison of claims for an observation unit within a particular scale of insurance rates reveals a variance that is other than temporary, the relevant **premiums** are adjusted. All actuarial assumptions are reviewed and specified in consultation with an independent trustee. A safety margin factored into premiums is also intended to ensure that obligations can be met if claims are higher than the level provided for in cost calculations.

In the health insurance business, the **decrement tables** include assumptions regarding mortality and the probability of other relevant withdrawal factors. Under the requirements set out in the German Health Insurance Supervision Regulation (KVAV), these assumptions must be specified and reviewed from the perspective of prudent risk assessment. It is for this reason that a new mortality table is developed annually by the Verband der privaten Krankenversicherung e.V. (PKV) [Association of German private healthcare insurers] in consultation with BaFin. In accordance with statutory provisions, R+V carries out an annual comparison of its calculations with the most recently published mortality tables.

When determining **lapse probabilities** for the purposes of its calculations, R+V uses both its own observations and the latest figures published by BaFin.

Where premiums were adjusted on January 1, 2024, R+V used the new PKV mortality table valid for 2024 to determine both new business premiums and those **premium adjustments** in existing business.

Unisex insurance rate scales are offered in R+V's **new business**. The cost calculation for these rates is not only based on the existing gender breakdown, but also takes into account the expected pattern of switching by existing policyholders to the new rates. The appropriateness of the composition of the portfolio resulting from the calculations is reviewed by actuaries using comparable calculations.

#### Risk management in casualty insurance business

The risk situation in the casualty insurance division is characterized by the fact that it is fixed-sum insurance and not indemnity insurance. Consequently, the maximum benefit per insured person is restricted to the sum insured.

A risk review also forms part of the underwriting policy in the case of casualty insurance. Premiums are reviewed on an ongoing basis to ensure that they remain appropriate. Claims are assessed on a case-by-case basis.

## 16.5 Management of non-life actuarial risk

### 16.5.1 Risk measurement

The **overall solvency requirement** for actuarial risk is determined in accordance with the standard formula in Solvency II over a period of 1 year with a confidence level of 99.5 percent. The capital requirements for **premium and reserve risk** are calculated on the basis of risk factors and volume measures for all branches of insurance in which business is conducted. The risk factors (e.g. the standard deviation as a percentage of the volume measure) describe the degree of threat posed by the risk. The volume measure for the **premium risk** is essentially the net premium income earned in the financial year and in the first and second years after that. The net claims provisions in the form of a best-estimate valuation constitute the volume measure for the **reserve risk**.

The capital requirement for **catastrophe risk** is calculated as an aggregation of four risk modules. These are natural catastrophe risk (broken down into the following natural hazards: hail, storm, flood, earthquake, and subsidence), the catastrophe risk of non-proportional reinsurance in non-life insurance, risk of man-made catastrophe, and other catastrophe risk in non-life insurance. Catastrophe risk is calculated using the volume measures of sums insured and premiums. Risk mitigation through reinsurance is taken into consideration.

To determine the **overall solvency requirement** as part of internal risk assessment, empirical distributions are generated for the relevant parameters for most parts of the portfolio, such as the claim amount and the number of claims per sector and claim type (e.g. basic claims, major claims, catastrophe claims). The value-at-risk can then be determined with the required confidence level directly from the underwriting result modeled in this way, recorded as a loss function. The parameters for the analyzed distributions are set using historical portfolio data and related planning data. They are therefore intended to reflect the actual risk position.

In the case of catastrophe risk in connection with the **direct insurance business**, the risk modeling for calculating basic claims relating to the natural hazard earthquake and basic claims and minor cumulative events relating to the natural hazards hail, storm, and flood is based on mathematical/statistical methods. The minimum and maximum claim amounts for minor cumulative events are derived from the group's own claims history. Modeling is based on the group's own claims data. The risk modeling for major cumulative events relating to the natural hazards hail, storm, flood, and earthquake uses probability-based natural hazard models. This approach uses catastrophe claims that have been modeled by external providers for each natural hazard and take account of the specific risk profile.

For the catastrophe risk in its **inward reinsurance business**, R+V deploys a simulation tool for stochastic risk modeling. To model the natural catastrophe risk on an individual contract basis, event catalogs from external providers containing predefined scenarios based on historical observations are used. The event catalogs cover the main countries and natural hazards related to the underwritten risk in the inward reinsurance concerned. In the case of countries and natural hazards for which there is no event catalog, modeling is based on R+V's own claims history. This involves generating scenarios for the current portfolio on the basis of historical major claims.

For inward reinsurance purposes, modeling based on the group's own claims history is also used to determine the overall solvency requirement for the risk of **man-made catastrophe**. This involves generating scenarios for the current portfolio on the basis of the historical major claims.

#### 16.5.2 Risk management in direct non-life insurance business

**Premium and reserve risk** is managed through risk selection, risk-oriented premiums and products, and profit-oriented underwriting guidelines. In order to maintain a balanced risk profile, R+V ensures it has reinsurance cover for major individual risks. Managers use planning and control tools to ensure they are in a position at an early stage to identify unexpected or adverse portfolio or claim trends and to initiate appropriate corrective action in response to the changes in the risk situation. To make these risks manageable, pricing is based on a calculation that uses mathematical/statistical modeling.

The measurement of the overall solvency requirement for **natural catastrophe risk** is supplemented by analysis of the insurance contract portfolio. This analysis carried out with the aid of tools such as the ZÜRS Geo information system (zoning system for flooding, backwater flooding, and heavy rainfall) investigates risk concentrations and changes in these concentrations over time. The use of geographical diversification and the deployment of underwriting guidelines form the basis for managing risks arising from natural disasters.

R+V uses a prospective limit system to verify whether prescribed limits for the risk from natural disasters will be adhered to. The risk exposure reached on the basis of projected business growth is compared against a limit determined from the allocated internal risk capital.

To reduce actuarial risk, R+V purchases facultative and obligatory reinsurance cover, formulates risk exclusions, and designs risk-appropriate deductible models. Risk-bearing capacity is reviewed as part of the reinsurance decision-making process. This is used as the basis for reinsurance structures and liability layers.

The effects of inflation are factored into the costing of insurance rate scales for new business and into premium and index adjustments for in-force business. In 2024, an increase in costs for claims and repairs, especially in residential buildings insurance and motor vehicle insurance, led to premiums being adjusted.

#### 16.5.3 Risk management in inward non-life business

R+V counters premium and reserve risk by continuously monitoring the economic and political situation, by managing risk in accordance with its corporate strategy, and by setting insurance rates appropriate to the risk involved. The risk is managed on the basis of an earnings-driven underwriting policy. The assumption of risk is circumscribed by mandatory underwriting guidelines and limits that restrict potential liability arising from both individual and cumulative claims. R+V takes account of economic capital costs when underwriting risk. Compliance with these requirements is monitored.

The material actuarial risks in the inward reinsurance portfolio are natural catastrophe risk and reserve risk, and also far-reaching changes in the trends underlying the main markets.

Limits are set to support the central management and mitigation of cumulative risks. One of the mechanisms for managing risk is a systematic check on the cumulative authorized limits. If limits are overrun, R+V's Limit Committee is responsible for discussing and making decisions on appropriate action. The portfolio is continuously monitored for material concentrations of risk.

Action that can be taken to mitigate the risk includes management of gross risk and retrocession of parts of the portfolio, taking into account risk-bearing capacity and the effective costs of retrocession. Minimum requirements apply in relation to the credit rating of retrocessionaires. To minimize cumulative risk in connection with natural disasters in Europe, the United States, and other regions of the world to which it is exposed, R+V has entered into a number of retrocession agreements as part of its inward reinsurance business.

R+V monitors the claims rate trend promptly and continuously, allowing it to initiate preventive measures so that it always has a sufficient level of reserves. The reserves position is monitored in a number of ways, including by means of an expert report, which is prepared once a year.

### 16.6 Claims rates and settlements in non-life insurance

Under IFRS 17, the **claims rate in direct non-life insurance and inward non-life reinsurance business** is calculated as the ratio of changes in the liabilities for incurred claims (including payments for claims) to insurance revenue.

Under IFRS 17, **settlements** are calculated as the ratio of liabilities for incurred claims for prior years in which claims were incurred to the actual payments for those years – net of changes in claims and benefits and risk adjustments – excluding inward reinsurance.

Changes in claims rates and settlements (net of reinsurance) in direct non-life insurance and inward non-life reinsurance business are shown in Fig. VI.41.

FIG. VI.41 – INSURANCE SECTOR: CLAIMS RATES<sup>1</sup> AND SETTLEMENTS<sup>2</sup> IN NON-LIFE INSURANCE

|                                         | 2024 | 2023 | 2022 | 2021 | 2020 | 2019 | 2018 | 2017 | 2016 | 2015 |
|-----------------------------------------|------|------|------|------|------|------|------|------|------|------|
| <b>Claims rate according to IFRS 4</b>  |      |      |      |      |      |      |      |      |      |      |
| Including major/natural disaster claims |      |      | 73.9 | 73.8 | 76.5 | 76.3 | 76.2 | 76.6 | 76.1 | 76.2 |
| Excluding major/natural disaster claims |      |      | 66.1 | 68.0 | 70.4 | 72.7 | 71.1 | 72.8 | 72.3 | 74.0 |
| <b>Claims rate according to IFRS 17</b> |      |      |      |      |      |      |      |      |      |      |
| Including major/natural disaster claims | 81.8 | 77.3 | 73.2 |      |      |      |      |      |      |      |
| Excluding major/natural disaster claims | 74.3 | 68.4 | 64.3 |      |      |      |      |      |      |      |
| <b>Settlements according to IFRS 4</b>  |      |      | 2.9  | 2.9  | 1.9  | 0.6  | 1.1  | 3.1  | 3.6  | 1.6  |
| <b>Settlements according to IFRS 17</b> | -3.4 | 1.0  | 2.4  |      |      |      |      |      |      |      |

Not available

<sup>1</sup> Direct non-life insurance business and inward non-life reinsurance.

<sup>2</sup> IFRS 4: direct non-life insurance business and inward non-life reinsurance; IFRS 17: direct non-life insurance business.

### 16.7 Risk position

As at December 31, 2024, the **overall solvency requirement** for **life actuarial risk** amounted to €927 million (December 31, 2023: €946 million) with a **limit** of €1,100 million (December 31, 2023: €1,060 million).

The **overall solvency requirement** for **health actuarial risk** was calculated to be €335 million as at the reporting date (December 31, 2023: €255 million). The **limit** was €400 million (December 31, 2023: €285 million). The increase in risk was primarily the result of lower policyholder participation in risk.

The **overall solvency requirement** for **non-life actuarial risk** amounted to €2,013 million as at December 31, 2024 (December 31, 2023: €1,823 million) with a **limit** of €2,250 million (December 31, 2023: €1,900 million). The increased overall solvency requirement was mainly attributable to increased premiums and sums insured.

## 17 Market risk

### 17.1 Definition and business background

#### 17.1.1 Definition

Market risk describes the risk arising from fluctuation in the level or volatility of market prices of assets, liabilities, and financial instruments that have an impact on the value of the assets and liabilities of the entity. It reflects the structural mismatch between assets and liabilities, in particular with respect to their maturities. In accordance

with the breakdown specified in Solvency II, the bulk of credit risk within market risk is assigned to spread risk. The other parts of credit risk are measured within counterparty default risk and other risk types.

Market risk is broken down into the following subcategories:

- **Interest-rate risk** describes the sensitivity of the values of assets, liabilities, and financial instruments to changes in the term structure of interest rates or to the volatility of interest rates.
- **Spread risk** describes the sensitivity of the values of assets, liabilities, and financial instruments to changes in the level or volatility of credit spreads above the risk-free interest-rate term structure. Default risk and migration risk are also included in this subcategory. The credit spread is the difference in interest rates between a high-risk and a risk-free fixed-income investment. Changes in the credit risk premiums lead to changes in the market value of the corresponding securities.
- **Equity risk** describes the sensitivity of the values of assets, liabilities, and financial instruments to changes in the level or volatility of the market prices of equities. Equity investment risk is also a part of equity risk. Equity risk arises from existing equity exposures as a result of market volatility.
- **Currency risk** describes the sensitivity of the values of assets, liabilities, and financial instruments to changes in the level or volatility of exchange rates. Currency risk arises as a result of exchange rate volatility either from investments held in a foreign currency or the existence of a currency imbalance between insurance liabilities and investments.
- **Real-estate risk** describes the sensitivity of the values of assets, liabilities, and financial instruments to changes in the level or volatility of the market prices of real estate. Real-estate risk can arise as a result of negative changes in the fair value of real estate held directly or indirectly. This may be the result of a deterioration in the specific characteristics of the real estate or a general change in market prices (for example in connection with a real estate crash).

#### 17.1.2 Business background

Market risk arises in the insurance business as a result of investing activities. It is caused by the timing difference between the payment of premiums by the policyholder and the payments for claims and benefits by the insurance company, and by endowment-type business in personal insurance.

### 17.2 Risk factors

#### 17.2.1 General risk factors for market risk

The material general risk factors for R+V's market risk generally correspond to the risk factors impacting on market risk in the Bank sector, which are described in chapter VI.10.3.

An exception to this are unexpected movements in the interest-rate market, which have a differing impact on the Bank sector and on the Insurance sector. The interest-rate-related risk factors described in chapter VI.5.2.6 could have an adverse impact on R+V's investments as follows:

- A **rise in interest rates** and a widening of bond spreads would lead to a reduction in the fair values of investments. Falls in fair value caused by a rapid rise in interest rates or the widening of spreads could have a temporary negative impact on operating profit, or a permanent negative impact if investments have to be sold. A negative change in the fair values of investments associated with a widening of spreads in isolation could also impair R+V's solvency situation.
- By contrast, a **fall in interest rates** would have a positive valuation effect on R+V's portfolio of interest-bearing exposures in the near term. However, a renewed period of low interest rates could, in the medium term, pose additional challenges for R+V in its life insurance business in respect of the guaranteed returns that it needs to generate.

#### 17.2.2 Sustainability-related risk factors for market risk

Other risk factors associated with R+V's investing activities could arise from sustainability risk. For example, action by policymakers, decisions by the courts, or the withdrawal of licenses could have an adverse effect on the price of corporate bonds, the share prices of equities, or the fair value of real estate held in the R+V portfolio and

exposed to **transition risk**. The value of the portfolio could also be hit by rising inflation as a consequence of higher energy and carbon prices.

### 17.3 Risk management

#### 17.3.1 Market risk measurement

The **overall solvency requirement** for market risk is determined in accordance with the standard formula in Solvency II over a period of 1 year with a confidence level of 99.5 percent. The measurement of market risk involves analyzing shock scenarios specified in **Solvency II** requirements, in some cases supplemented by the group's own parameterization.

The capital requirements for **interest-rate risk** are determined on the basis of shock scenarios calculated for an increase in interest rates and a decrease in interest rates. R+V uses the shock factors in the standard formula to calculate the overall solvency requirement for interest-rate risk. It also includes a capital buffer that takes into account changes in the direction of interest-rate trends.

The capital requirements for **spread risk** are calculated using a factor approach based on the relevant lending volume. The level of the shock factor is determined by the security's rating and the modified duration of the investment. With loan securitizations, a distinction is made between single, double, and multiple securitization structures. Depending on which is applicable, different rating-dependent shock factors are used. R+V uses its own shock factors, based on a portfolio model, to calculate the overall solvency requirement.

The capital requirements for **equity risk** are determined on the basis of stress scenarios calculated for a decrease in market value. The stress amounts depend on the equity type, e.g. whether it is listed on a regulated market in a member state of the European Economic Area or Organisation for Economic Co-operation and Development (OECD). The capital requirement for equity risk is based on the relevant equity exposure. It is determined using modeling and risk quantification based on observable data. The parameters of the standard formula in Solvency II are increased in order to take account of default risk. Default risk describes the risk of loss resulting from issuer insolvency.

**Currency risk** is calculated using a scenario approach that reflects the impact of a decrease or increase in the exchange rate for a foreign currency. The shock factor for determining the overall solvency requirement is based on the individual currency portfolio of R+V. Lower factors are applied for currencies that are pegged to the euro than for those that are not pegged to the euro.

The calculation of **real-estate risk** looks at both property held directly (e.g. land and buildings) and real estate funds. The shock factor for determining the overall solvency requirement for real-estate risk is a stress scenario adapted from the standard formula and reflects the fact that direct holdings consist overwhelmingly of investments in German real estate and fund holdings consist primarily of European real estate.

#### 17.3.2 Principles of market risk management

The risk attaching to investments is managed in accordance with the guidelines specified by EIOPA, the stipulations in VAG, the information provided in regulatory circulars, and internal investment guidelines (see also the disclosures on market risk strategy in chapter VI.15.1). R+V aims to ensure compliance with the internal provisions in the risk management guidelines for investment risk and with other regulatory investment principles and rules by means of investment management, internal control procedures, a forward-looking investment policy, and organizational measures. The management of risk encompasses both economic and accounting aspects.

R+V counters investment risk by ensuring a good balance between security and profitability while safeguarding liquidity. By maintaining a mix and diversification of investments, R+V's investment policy aims to take into account the objective of mitigating risk.

In addition to diversification via maturity dates, issuers, countries, counterparties, and asset classes, limits are also applied in order to mitigate risk.

Asset/liability management investigations are carried out at R+V. The necessary capital requirement to maintain solvency is reviewed on an ongoing basis with the support of stress tests and scenario analyses. Special attention is paid to the effects of interest-rate changes and volatile capital markets. R+V uses derivatives to manage market risk.

### 17.3.3 Management of individual market risk categories

In the management of **interest-rate risk**, R+V adheres to the principle of a mix and diversification of investments, combined with balanced risk-taking in selected asset classes and duration management that takes account of the structure of obligations.

In the management of **spread risk**, R+V pays particular attention to high credit ratings for investments, with the overwhelming majority of its fixed-income portfolio being held in investment-grade paper (see also Fig. VI.46 in chapter VI.17.5.2). The use of third-party credit risk evaluations and internal expert assessments, which are often more rigorous than the credit ratings available in the market, serves to further minimize risk. Mortgage lending is also subject to internal rules that help to limit default risk.

**Equity risk** is mitigated by diversifying holdings across different equity asset classes and regions. Asymmetric strategies are also used to reduce or increase equity exposure under a rules-based approach. At R+V, equities are used as part of a long-term investment strategy to guarantee that obligations to policyholders can be satisfied; generating profits by exploiting short-term fluctuations to sell shares is not its objective. The risk of having to sell equities at an inopportune moment is mitigated by the broadly diversified portfolio of investments.

**Currency risk** is controlled by systematic foreign-exchange management. Virtually all reinsurance assets and liabilities are denominated in the same currency.

**Real-estate risk** is mitigated by diversifying holdings across different locations and types of use.

### 17.3.4 Management of risk concentrations

R+V's investment approach focuses on avoiding risk concentrations in the portfolio and optimizing its risk profile by broadly diversifying investments. To achieve this, it applies the principle of an appropriate mix and diversification of investments and complies with the quantitative limits specified through the internal rules in the risk management guidelines for investment risk.

Risk concentrations are analyzed at least annually to assess whether they are material or not. Potential risk concentrations arise from the combination of analyzed risk type and type of concentration (e.g. individual exposure, sector, country, or region). The analysis pays particular attention to the risk-adjusted view, i.e. risk remaining after the risk-mitigating effects of insurance liabilities have been taken into account. Items currently of particular note in this regard are the portfolios of Italian government bonds combined with the shares held in the Italian Assimoco companies for business-policy reasons and the long-term interest-rate risks arising from pension products in force for a long period of time. These risks are consciously assumed.

### 17.3.5 Distinctive features of managing market risk in personal insurance business

For life insurance contracts and for casualty insurance contracts with premium refund clauses that guarantee minimum returns, there is a risk that the guaranteed minimum return agreed for certain products when contracts are signed cannot be generated in the capital markets over the long term. In the case of products with long-term guarantees, there is a risk of negative variances over the term of the contracts compared with calculation assumptions because of the length of time covered by the contracts. The main reasons for variances are the change in the capital market environment and maturity mismatches between investments and insurance contracts.

Market risk can be countered by writing new business that takes into account the current capital market situation and by taking action to boost the portfolio's risk-bearing capacity. It is crucial to ensure that there is enough free capital that can be made available even in adverse capital market scenarios. The necessary capital requirement to maintain solvency is reviewed on an ongoing basis with the aid of stress tests and scenario analyses as integral components of asset/liability management.

Policyholder participation features in the form of future declarations of bonuses are also a key instrument used to reduce market risk attaching to life insurance.

The R+V insurance companies' liabilities for remaining coverage as required by German commercial law, broken down by discount rate, is shown in Fig. VI.42 for the main life and casualty insurance portfolios. The method for calculating insurance contract liabilities in life and casualty insurance is explained in note 11 of the notes to the consolidated financial statements.

The company actuarial discount rate calculated in accordance with the procedure developed by the Deutsche Aktuarvereinigung e.V. (DAV) [German Actuarial Association] is used in determining the imputed health insurance discount rate. This procedure is based on a fundamental professional principle issued by the DAV for determining an appropriate discount rate.

#### 17.3.6 Managing risk arising from defined benefit pension obligations

The R+V entities have pension obligations (defined benefit obligations) to their current and former employees. By entering into such direct defined benefit obligations, they assume a number of risks, including risks associated with the measurement of the amounts recognized on the balance sheet, in particular risk arising from a change in the discount rate, risk of longevity, inflation risk, and risk in connection with salary and pension increases. A requirement may arise to adjust the existing provisions for pensions and other post-employment benefits as a result of decisions by the courts, legislation, or changes in the (consolidated) financial reporting. The plan assets at R+V are assets in reinsured pension schemes and funds, and are subject to interest-rate risk. The strategy adopted for the pension assets is predominantly driven by the defined benefit obligations.

FIG. VI.42 – INSURANCE SECTOR: LIABILITIES FOR REMAINING COVERAGE AS REQUIRED BY GERMAN COMMERCIAL LAW, BY DISCOUNT RATE, FOR THE MAIN INSURANCE PORTFOLIOS<sup>1, 2</sup>

| Discount rate | Proportion of liabilities for remaining coverage as required by German commercial law in 2024 |         | Proportion of liabilities for remaining coverage as required by German commercial law in 2023 |         |
|---------------|-----------------------------------------------------------------------------------------------|---------|-----------------------------------------------------------------------------------------------|---------|

<sup>1</sup> The table covers the following insurance products that include a guaranteed rate of return:

- Casualty insurance policies with premium refund
- Casualty insurance policies with premium refund as pension insurance
- Pension insurance policies
- Endowment insurance policies, including capital accumulation, risk and credit insurance policies, pension plans with guaranteed insurance-based benefits
- Capital deposit products

<sup>2</sup> The share attributable to supplementary insurance contracts is listed under the relevant actuarial assumptions for the associated main insurance contract.

## 17.4 Managing sustainability risks arising from investment activity

Transition risks can be reflected in the market risk of R+V as a result of negative changes in the fair values of investments.

R+V has a science-based climate target for its investment activity, which involves cutting greenhouse gas emissions from investment activities to make them climate-neutral by 2050.

R+V's investment portfolio is evaluated on the basis of key sustainability figures, including ESG scores obtained from third-party data providers. These are drawn from assessments of climate-related risk, controversies, and breaches of standards, such as the United Nations Global Compact. R+V can initiate processes to engage with individual issuers in order to mitigate sustainability risks. These processes serve to clarify sustainability-related matters or controversies.

Sustainability risks in R+V's investment process are monitored and managed by two committees. The ESG task force monitors general sustainability risks at individual issuer level, while the carbon task force manages climate

targets at portfolio level. The amount of climate risk from various asset classes is also taken into account in the risk capital calculation.

## 17.5 Lending volume

### 17.5.1 Reconciliation of the lending volume

The amount and structure of the lending volume are key factors for the aspects of credit risk reflected in market risk and counterparty default risk. To identify possible risk concentrations, the volume liable to credit risk is broken down by rating class, industry sector, and country group.

Fig. VI.43 shows a reconciliation of the lending volume on which the risk management is based to individual balance sheet items in order to provide a transparent illustration of the link between the consolidated financial statements and risk management. The differences in methods used in the external consolidated financial statements and the internal management accounts are explained in chapter VI.8.7.2.

FIG. VI.43 – INSURANCE SECTOR: RECONCILIATION OF THE LENDING VOLUME

### 17.5.2 Change in lending volume

In accordance with the breakdown specified in Solvency II, the bulk of credit risk within market risk is assigned to spread risk. The other parts of credit risk are measured within counterparty default risk and other risk types.

As at December 31, 2024, the **total lending volume** of R+V had increased by 1 percent to €90.8 billion (December 31, 2023: €89.8 billion).

The financial sector and the public sector, which are the dominant **asset classes**, together accounted for 68 percent of the total lending volume as at December 31, 2024 (December 31, 2023: 67 percent).

The explanation of the asset class concept in the Bank sector (see chapter VI.8.7.3) applies analogously to the Insurance sector. Fig. VI.44 shows the breakdown of the lending volume by asset class.

FIG. VI.44 – INSURANCE SECTOR: LENDING VOLUME, BY ASSET CLASS

| € billion                                                 | Dec. 31, 2024 | Dec. 31, 2023 |
|-----------------------------------------------------------|---------------|---------------|
| Financials                                                | 40.7          | 40.1          |
| Corporates                                                | 11.9          | 12.3          |
| Public sector                                             | 20.8          | 19.7          |
| Real estate (commercial and retail customers)             | 16.5          | 16.5          |
| Other retail business                                     | 0.1           | 0.1           |
| Asset-backed securities and asset-backed commercial paper | 0.9           | 1.2           |
| <b>Total</b>                                              | <b>90.8</b>   | <b>89.8</b>   |

In the real estate asset class (commercial and retail customers), the volume of lending in the **home finance** business came to €14.3 billion as at December 31, 2024 (December 31, 2023: €14.2 billion). Of this amount, 87 percent was accounted for by loans for less than 60 percent of the value of the property as at December 31, 2024, a situation that was unchanged compared with December 31, 2023.

As at the reporting date, the volume of home finance was broken down by finance type as follows (figures as at December 31, 2023 shown in parentheses):

- Consumer home finance: €13.0 billion (€12.8 billion)
- Commercial home finance: €0.1 billion (€0.1 billion)
- Commercial finance: €1.2 billion (€1.3 billion)

In the case of home finance, the entire volume disbursed is backed by traditional loan collateral.

FIG. VI.45 – INSURANCE SECTOR: LENDING VOLUME, BY COUNTRY GROUP

| € billion          | Dec. 31, 2024 | Dec. 31, 2023 |
|--------------------|---------------|---------------|
| Europe             | 45.6          | 43.9          |
| of which: eurozone | 36.8          | 34.9          |
| North America      | 8.2           | 8.2           |
| Central America    | 0.6           | 0.5           |
| South America      | 0.9           | 1.0           |
| Asia               | 3.4           | 3.5           |
| Africa             | 0.3           | 0.3           |
| Other              | 1.9           | 1.9           |
| <b>Total</b>       | <b>60.9</b>   | <b>59.3</b>   |

Fig. VI.45 shows the **geographical distribution** of the credit portfolio by country group. Borrowers based in Germany are not included in this breakdown. The relevant country for the assignment to a country group is the one in which the economic risk arises. As at December 31, 2024, 75 percent of the total lending outside Germany was concentrated in Europe (December 31, 2023: 74 percent).

For **credit ratings**, R+V generally uses ratings from rating agencies approved by the supervisory authorities. It also applies its own expert ratings in accordance with the provisions of Credit Rating Agency Regulation III to validate the external credit ratings. R+V has defined the external credit rating as the maximum, even in cases where its own rating is better. The ratings calculated in this way are matched to the DZ BANK credit rating master scale using the methodology shown in Fig. VI.25 (chapter VI.8.5.1).

The **rating structure** of the lending volume in the Insurance sector is shown in Fig. VI.46. Of the total lending volume as at the reporting date, 76 percent was attributable to investment-grade borrowers (December 31, 2023: 75 percent). Defaults, represented by rating classes 5A to 5E, continued to account for less than 1 percent of the total lending volume, as had also been the case as at December 31, 2023. The lending volume that is not rated, which also remained unchanged at 23 percent of the total lending volume, essentially comprised consumer home finance for which external ratings were not available. Consumer home finance is deemed to be low-risk because the lending is based on a selective approach and the mortgageable value of the assets is limited.

In the analysis of **individual concentrations**, the 10 counterparties associated with the largest lending volumes accounted for 16 percent of R+V's total lending volume as at December 31, 2024 (December 31, 2023: 17 percent).

FIG. VI.46 – INSURANCE SECTOR: LENDING VOLUME, BY INTERNAL RATING CLASS

| € billion            |    | Dec. 31, 2024 | Dec. 31, 2023 |
|----------------------|----|---------------|---------------|
| Investment grade     | 1A | 27.8          | 23.0          |
|                      | 1B | 7.6           | 11.4          |
|                      | 1C | –             | –             |
|                      | 1D | 10.5          | 10.6          |
|                      | 1E | –             | –             |
|                      | 2A | 6.5           | 6.3           |
|                      | 2B | 4.7           | 5.6           |
|                      | 2C | 5.8           | 4.9           |
|                      | 2D | 3.3           | 2.7           |
|                      | 2E | –             | –             |
|                      | 3A | 2.8           | 3.0           |
| Non-investment grade | 3B | 0.4           | 0.4           |
|                      | 3C | 0.4           | 0.3           |
|                      | 3D | –             | –             |
|                      | 3E | 0.2           | 0.2           |
|                      | 4A | 0.1           | 0.2           |
|                      | 4B | 0.1           | –             |
|                      | 4C | –             | –             |
|                      | 4D | –             | –             |
|                      | 4E | –             | –             |
| Default              |    | 0.2           | –             |
| Not rated            |    | 20.5          | 21.0          |
| <b>Total</b>         |    | <b>90.8</b>   | <b>89.8</b>   |

### 17.5.3 Credit portfolios particularly affected by a negative environment

#### Economic policy divergence in the eurozone

Differences in economic policy in the eurozone are particularly affecting investments of R+V in **Italy**. As at December 31, 2024, the affected exposure amounted to €3,308 million (December 31, 2023: €2,493 million). The increase in the exposure compared with December 31, 2023 was largely due to higher fair values and bond purchases.

#### Acute global crises

The following sections present the lending volume in the credit portfolios in which the effects of acute global crises were more noticeable than in the rest of R+V's credit portfolios. The regional allocation of the exposures, which mainly comprise fixed-income securities, is shown in Fig. VI.47.

FIG. VI.47 – INSURANCE SECTOR: LENDING VOLUME IN COUNTRIES PARTICULARLY AFFECTED BY ACUTE GLOBAL CRISES

| € million                                                                             | Dec. 31, 2024 | Dec. 31, 2023 |
|---------------------------------------------------------------------------------------|---------------|---------------|
| Lending volume in countries affected by the Israel-Hamas war                          | 590           | 572           |
| of which: Egypt                                                                       | –             | 4             |
| of which: Israel                                                                      | 290           | 293           |
| of which: Jordan                                                                      | 32            | 20            |
| of which: Saudi Arabia                                                                | 268           | 254           |
| Lending volume in countries affected directly by the dispute between China and Taiwan | 161           | 168           |
| <b>Lending volume</b>                                                                 | <b>751</b>    | <b>740</b>    |

In 2024, Saudi Arabia and Jordan were classified as countries affected, in the broader sense, by the war between Israel and Hamas. This means that the total lending volume differs from the corresponding disclosure in the 2023 risk report.

As at December 31, 2024, the volume of lending extended to countries affected by the dispute between **China and Taiwan** related exclusively to China. As at the reporting date, there was no exposure to borrowers based in Taiwan, a situation that was unchanged compared with December 31, 2023.

The proportion of R+V's lending volume that was associated with acute crises stood at 0.8 percent of its total lending volume as at December 31, 2024. This situation was also unchanged year on year. In the 2023 risk report, the relevant lending volume had made up 0.5 percent of the total lending volume excluding Saudi Arabia and Jordan.

### 17.6 Risk position

As at December 31, 2024, the **overall solvency requirement** for market risk amounted to €3,965 million (December 31, 2023: €3,580 million) with a **limit** of €4,450 million (December 31, 2023: €3,695 million). The increase in risk related first and foremost to spread risk and equity risk and was attributable to lower policyholder participation in risk in the life insurance business.

Fig. VI.48 shows the overall solvency requirement for the various types of market risk.

FIG. VI.48 – INSURANCE SECTOR: OVERALL SOLVENCY REQUIREMENT FOR MARKET RISK, BY RISK SUBTYPE

| € million                            | Dec. 31, 2024 | Dec. 31, 2023 |
|--------------------------------------|---------------|---------------|
| Interest-rate risk                   | 2,318         | 2,392         |
| Spread risk                          | 1,028         | 718           |
| Equity risk                          | 1,631         | 1,232         |
| Currency risk                        | 381           | 335           |
| Real-estate risk                     | 473           | 432           |
| <b>Total (after diversification)</b> | <b>3,965</b>  | <b>3,580</b>  |

## 18 Counterparty default risk

### 18.1 Definition and business background

Counterparty default risk reflects potential losses that could arise from unexpected default or deterioration in the credit standing of counterparties and debtors of insurance and reinsurance companies over the following twelve months. It covers risk-mitigating contracts, such as reinsurance arrangements, securitizations and derivatives, and receivables from intermediaries, as well as any other credit risk that is not otherwise covered by risk measurement.

Counterparty default risk takes account of collateral or other security that is held by the insurance or reinsurance company and any associated risks.

### 18.2 Risk factors

Counterparty default risk can arise as a result of unexpected default or deterioration in the credit standing of mortgage loan borrowers, counterparties of derivatives, reinsurance counterparties, policyholders, or insurance brokers.

### 18.3 Risk management

#### 18.3.1 Measurement of counterparty default risk and management of limits

The **overall solvency requirement** for counterparty default risk is determined in accordance with the standard formula in Solvency II over a period of 1 year with a confidence level of 99.5 percent. The capital requirements for counterparty default risk are determined on the basis of the relevant exposure and the expected losses per counterparty. R+V manages counterparty default risk at individual entity level.

Volume and counterparty limits apply to transactions involving derivatives. The various risks are monitored and transparently presented as part of the reporting system. Only economic hedges are used and they are not reported on a net basis in the consolidated financial statements.

R+V uses the views expressed by the international rating agencies in conjunction with its own credit ratings to help it to assess counterparty and issuer risk. Compliance with the limits for major counterparties is reviewed on an ongoing basis, with checks on limit utilization and compliance with investment guidelines.

#### 18.3.2 Mitigating counterparty default risk

Default management mitigates the risks arising from defaults on receivables relating to direct insurance operations with policyholders and insurance brokers. For the purposes of German commercial law, the average ratio of defaults to gross premiums written over the past three years continued to stand at 0.1 percent as at December 31, 2024.

The default risk for receivables arising from inward reinsurance business and reinsurance contracts held is limited by continuously monitoring credit ratings and making use of other sources of information in the market.

## 18.4 Risk position

**Receivables arising from reinsurance contracts held** amounted to €68 million as at December 31, 2024 (December 31, 2023: €73 million). Of this amount, 100 percent was accounted for by entities with an external rating of A or better under the system of rating agency S&P Global Ratings, a situation that was unchanged compared with December 31, 2023.

The **reinsurers' share of insurance liabilities** is a variable that impacts on the default risk of reinsurance counterparties. Claims against reinsurers for insured events that have not yet occurred and for insured events from direct insurance operations and from inward reinsurance that have occurred, presented by external rating class under the system of rating agency S&P Global Ratings, are shown in Fig. VI.49. Ratings that were not available at the reporting date are now shown as 'Not rated', whereas they had been included in 'Other ratings' in the 2023 risk report.

FIG. VI.49 – INSURANCE SECTOR: VOLUME OF REINSURANCE CONTRACTS HELD, BY EXTERNAL RATING CLASS

| € million    | Dec. 31, 2024 | Dec. 31, 2023 |
|--------------|---------------|---------------|
| AAA          | 1             | –             |
| AA+ to AA-   | 44            | 21            |
| A+ to A-     | 119           | 119           |
| B            | 3             | 1             |
| Not rated    | 13            | 12            |
| <b>Total</b> | <b>180</b>    | <b>154</b>    |

**Overdue receivables from policyholders and insurance brokers** more than 90 days past due as at the reporting date amounted to €12 million as at December 31, 2024 (December 31, 2023: €16 million).

As at December 31, 2024, the **overall solvency requirement** for counterparty default risk amounted to €252 million (December 31, 2023: €219 million) with a **limit** of €325 million (December 31, 2023: €245 million). The increased overall solvency requirement was mainly attributable to lower policyholder participation in risk.

## 19 Reputational risk

### 19.1 Definition and business background

Reputational risk is defined as the risk of losses that could arise from damage to the reputation of R+V or of the entire industry as a result of a negative perception among the general public (for example, customers, business partners, shareholders, authorities, the media).

Reputational risk can arise as an independent risk (primary reputational risk) or as an indirect or direct consequence of other types of risk, such as operational risk (secondary reputational risk).

### 19.2 Risk factors

If R+V's reputation deteriorates, there is a risk that existing or potential customers will be unsettled with the result that **business relationships** might be terminated or it might not be possible to carry out planned transactions. There is also a risk that it will no longer be possible to guarantee the backing of **stakeholders** – such as partners in the Cooperative Financial Network and employees – necessary to conduct business operations. The possibility cannot be ruled out either that entities in the Bank sector will be affected if R+V has a negative reputation.

Reputational risk is particularly affected by **sustainability-related risk factors** in the form of transition risks, social risks, and corporate governance risks. If such sustainability-related risks materialize, this can lead to increased reputational risk. The effect can spread both indirectly via customers or products and directly via the entities' own processes or business activities.

Sources of **social risk** are unfair, opaque, or improper business practices in respect of customers, especially if these lead to changes in customer behavior or in demand.

Potential causes of **corporate governance risk** include governance structures that are inadequate or lack transparency. Another possibility is if an entity has an inadequate code of conduct or does not have one at all. These shortcomings may weaken employees' confidence in the effectiveness of the entity's senior management. A lack of, or only inadequate, measures to tackle money laundering, financing of terrorism, and all forms of corruption (e.g., acceptance of advantages, granting of advantages, active bribery, and passive corruption) constitute further forms of corporate governance risk. They may damage R+V's reputation among employees, customers, and business partners.

**Transition risk** can arise if stakeholders regard R+V's approach to sustainability matters as inappropriate, in particular if they deem existing or future products or current or proposed business relationships to have an adverse impact on the climate or environment. Furthermore, transition risk can be triggered by investments in businesses that are responsible for environmental pollution, fail to adhere to social norms, neglect their data protection responsibilities, or inadequately implement measures to prevent corruption, fraud, or tax evasion.

### 19.3 Risk management

R+V's corporate communications are coordinated centrally so that any inaccurate presentation of circumstances can be countered. Media reports about the insurance industry in general and R+V in particular are monitored and continuously analyzed across all R+V departments. This analysis implicitly and explicitly takes account of **sustainability matters**.

R+V's reputational risk is not specifically quantified within the Solvency II framework. However, it is implicitly included in the overall solvency requirement for life actuarial risk (lapse risk).

## 20 Operational risk

### 20.1 Definition and business background

Operational risk is defined as the risk of losses arising from inadequate or failed internal processes, personnel, or systems, or from external events.

Operational risk in the Insurance sector is broken down into the following subtypes:

- Legal and compliance risk
- Information risk including ICT risk
- Security risk
- Outsourcing risk
- Project risk

Operational risk could arise in any division of R+V. Sustainability risk in the form of environmental, social, or corporate governance risk could be a risk factor that gives rise to operational risk.

### 20.2 Central risk management

The **overall solvency requirement** for operational risk in the Insurance sector is determined in accordance with the standard formula in Solvency II over a period of 1 year with a confidence level of 99.5 percent. The risk calculation uses a factor approach, taking account of premiums, provisions and, in the case of unit-linked business, costs.

R+V uses scenario-based risk self-assessments and risk indicators to manage and control operational risk. In the **risk self-assessments**, operational risk is assessed in terms of the probability of occurrence and the level of loss. Qualitative assessments can be used in exceptional cases.

**Risk indicators** are intended to help the Insurance sector to identify risk trends and concentrations at an early stage and to detect weaknesses in business processes. A system of warning lights is used to indicate risk situations based on specified threshold values.

To support the management of operational risk, all of R+V's business processes are structured in accordance with the requirements of the **framework guidelines** for the authorizations and powers of attorney of employees in R+V entities. Divisions not covered by these guidelines are subject to other policy documents, including policies on new business and underwriting.

The **internal control system** is a key instrument used by R+V to **limit operational risk**. Rules and controls in each department and reviews of the use and effectiveness of the internal control system carried out by Group Audit at R+V aim to avert the risk of errors and fraud. Payments are largely automated. Powers of attorney and authorizations stored in user profiles, as well as automated submissions for approval based on a random generator, are also used. Manual payments are approved by a second member of staff.

### 20.3 Consideration of sustainability risks

There is a risk that third parties could assert claims due to **transition risks**.

Potential causes of **corporate governance risk** include governance structures that are inadequate or lack transparency. Another possibility is if an entity has an inadequate code of conduct or does not have one at all. These shortcomings may weaken employees' confidence in the effectiveness of the entity's senior management and lead to ineffective business processes.

The instruments used to identify operational risk – such as the risk self-assessment and risk indicators – also incorporate ESG matters. This ensures that sustainability-driven operational risks are managed and monitored.

To expand the management of operational risks driven by ESG factors, an ESG-specific label is currently being introduced as part of the aforementioned management tools. This will enable reliable statements to be made on

the basis of expert assessments by the risk management units that indicate the impact of sustainability risk factors on operational risk.

## 20.4 Operational risk subtypes

### 20.4.1 Legal and compliance risk

#### Risk factors

Legal risk may arise from changes in the legal environment, including changes in the way that the authorities or the courts interpret legal provisions. In particular, there is a risk that the implemented compliance and risk management systems could be inadequate for completely preventing or uncovering violations of legal provisions, for identifying and assessing all relevant risks, or for initiating appropriate corrective measures. Examples of relevant situations are notifiable infringements of data protection regulations, breaches of reporting or notification requirements to supervisory or tax authorities, and violations of sanctions or embargoes.

#### Effects if risk materializes

Violations of legal provisions may have legal implications for R+V, for the members of its decision-making bodies, or for its employees. They may give rise, for example, to fines, penalties, retrospective tax payments, or claims for damages by third parties. These effects could reduce R+V's appeal as a partner in business transactions or as an employer and lead to losses in value.

#### Risk management

The basic principles for managing compliance risk applicable to the entities in the DZ BANK Group are described in chapter VI.3.9. The data protection measures in place and the code of conduct are also explained in the same chapter.

At R+V, legal disputes arising from the processing of insurance claims or benefit payments are covered by insurance liabilities, and therefore do not form part of operational risk. R+V monitors and analyzes relevant decisions by the courts with a view to mitigating legal risk by identifying any need for action in good time and implementing specific corrective measures. The compliance function has also implemented systems, processes, and controls in order to counter compliance risks.

### 20.4.2 Information risk including ICT risk

#### Risk factors

Information risk can arise from a loss of confidentiality, integrity, availability, or authenticity of information or data. If the risk is in connection with the use of information or communication technology (data media), it is referred to as ICT risk. This also includes cyber risk.

#### Effects if risk materializes

Malfunctions or breakdowns in IT systems (comprises software, hardware, and communication technology), including attacks from external sources – such as hackers or malware –, could have an adverse impact on the ability of the Insurance sector to efficiently maintain the processes necessary to carry out operating activities, protect saved data, ensure sufficient control, or continue to develop products and services. Furthermore, such malfunctions or breakdowns could lead to temporary or permanent loss of data. This could restrict operating activities, have a negative impact on reputation, or result in economic losses.

#### Risk management

The basic principles for managing information security applicable to the entities in the DZ BANK Group are described in chapter VI.3.10.

A core focus of R+V's IT strategy is to ensure the stable, secure, and efficient operation of the information and communications infrastructures and application systems. R+V's IT operations are largely centralized and involve a high degree of inhouse development. In its development work, the IT team incorporates standardized IT processes and procedures, applies best practice, and is closely guided by market standards.

A material aspect in the deployment of IT is digital operational resilience aimed at minimizing the impact of IT outages, particularly for critical business processes, and to avoid business interruptions.

Physical and logical precautionary measures have been established for the purpose of data and application security and to ensure that day-to-day operations are maintained. A particular risk would be a partial or total breakdown in data processing systems. R+V counters this risk by using two segregated data processing centers in which the data and systems are mirrored, special access security, fire control systems, and an uninterruptible power supply supported by emergency power generators. Exercises are carried out to test a defined restart procedure to be used in disaster situations with the aim of checking the efficacy of this procedure. Data is backed up and held within highly secure environments in different buildings. Furthermore, data is mirrored to a tape library at a remote, off-site location.

The level of security is enhanced through the systematic identification of protection requirements, security strategies based on defined IT security standards, business continuity planning, and capacity management. Where tasks allow, R+V makes flexible use of outsourcing options and IT providers in a risk-based approach. IT providers are integrated into R+V's processes where necessary and monitored on a risk basis.

R+V uses a dedicated management process – with defined roles, responsibilities, and procedures – to manage and control information risk in a holistic approach. Various information and IT security management tools are used to identify information risk, such as target/actual comparisons and penetration tests.

#### 20.4.3 Security risk

##### Risk factors

Security risk can arise from inadequate protection of individuals, premises, assets, or time-critical processes. Examples are epidemics or pandemics resulting from the spread of pathogens over a huge area, or limitations on the use of resources because of a power outage, other interruption to energy supply, or natural disaster. Climate change could lead to more frequent and more severe natural disasters.

##### Effects if risk materializes

Business interruptions could mean that processes and workflows are disrupted over several days. Moreover, sensitive internal and external interfaces could be jeopardized by long-term business interruptions. Furthermore, such scenarios could also have a negative impact on reputation.

##### Risk management

To ensure that it is operational at all times, R+V has a business continuity management (BCM) system, which is documented in internal corporate guidelines. The R+V security and BCM conference with representatives from all divisions and sites provides strategic and functional support and is intended to ensure that activities within R+V are coordinated. Reports on significant findings relevant to risk and on any exercises and tests that have been carried out are also submitted to the R+V Risk Committee.

The purpose of the BCM system is to ensure that R+V's operating activities can be maintained in the event of an emergency or crisis. To this end, (time-)critical business processes are recorded with the necessary resources. Any necessary documentation (such as business continuity planning) is prepared and reviewed. Special organizational structures, such as the R+V crisis management team and situation room, and the individual business continuity teams in the divisions and sites, have also been set up to deal with emergency and crisis situations.

Further details on business continuity management can be found in chapter VI.3.10.

## 20.4.4 Outsourcing risk

### Risk factors

R+V aims to provide high-quality services at competitive terms and conditions based on efficient internal organization of its business activities.

The outsourcing of activities to external providers or within the Group and the use of external IT procurement in line with the Digital Operational Resilience Act (DORA) can bring benefits in terms of quality and costs. At R+V, many tasks are performed centrally by certain R+V subsidiaries acting as service providers that render these activities in a joint operation for other R+V subsidiaries.

Outsourcing and external IT procurement entail different, specific risks if the service provider fails to comply with the strategic principles established by R+V or the related operational requirements when carrying out the outsourced activities. If a service provider is not suitable for the task or does not have the requisite financial stability, this could lead to defective performance or even loss of the service. Moreover, inappropriate management of operational risk by the service provider could have an adverse impact on business operations.

### Effects if risk materializes

If the risk factors were to materialize, they could lead to a loss of business, business interruptions, claims for damages from customers, or regulatory sanctions. They could also result in a negative impact on reputation.

### Risk management

The basic principles for managing outsourcing applicable to the entities in the DZ BANK Group are described in chapter VI.3.11.

Using these principles as a starting point, R+V has put in place the following measures to protect against potential outsourcing risk:

- Structured categorization of outsourcing arrangements and external procurement
- Identification of potential risk factors as part of the risk analysis
- Requirements for the mitigation of risk, including standard provisions that must be contractually agreed and integrated into business continuity management

## 20.4.5 Project risk

### Risk factors

Project risk could arise from the inadequate clarification of project targets or orders, from deficiencies in subsequent implementation, from communication shortcomings both inside and outside the project, or from unexpected changes in the general parameters applicable to a project.

### Effects if risk materializes

If project risk were to materialize, this could mean that the implementation of the project could require additional funds in excess of the budget. It could also give rise to further costs attributable to the failure to complete project requirements on schedule. Examples of such costs are additional costs in the line organization and impairment losses on capital investment related to the project. Earnings could also be reduced if new products or – due to changes to legal requirements – appropriately modified products cannot be offered in good time.

### Risk management

To provide a regulating framework for secure, efficient execution of projects, R+V has set up a Capital Investment Committee, which submits proposals for decision or approval and provides support for large-scale projects. The projects are subject to independent, close monitoring and control. At quarterly meetings, the Capital Investment Committee is kept informed of project results and any adjustments to project targets. The committee can intervene to provide guidance by becoming involved in discussions on targets.

## 20.5 Risk position

As at December 31, 2024, the **overall solvency requirement** determined for operational risk amounted to €678 million (December 31, 2023: €627 million). The **limit** was €800 million as at the reporting date (December 31, 2023: €700 million). This increase in risk was due to higher insurance liabilities calculated in accordance with Solvency II.

## 21 Risks from entities in other financial sectors

All entities that form part of R+V for regulatory purposes are generally included in the calculation of group solvency.

At R+V, the entities in other financial sectors mainly consist of pension funds and occupational pension schemes. Their **risk factors** generally correspond to the risk factors for risks backed by capital pursuant to Solvency II.

**Risk is quantified** for the pension funds and occupational pension schemes in accordance with the requirements currently specified by the insurance supervisor. This means applying the capital requirements in Solvency I, which are essentially calculated by applying a factor to the volume measures of liabilities for remaining coverage and capital at risk. Funding requirements are also assessed over a multi-year period when calculating the overall solvency requirement and own funds. This involves assessing whether existing regulatory requirements regarding insurance equity and liabilities, capital adequacy, and risk-bearing capacity can continue to be met in the future, taking risks into account. Projections, as well as existing analyses and reports, are used to make this assessment.

**R+V Pensionskasse AG**, Wiesbaden, (R+V Pensionskasse) is exposed to risks comparable with those faced by the life insurance entities. The main risk management activities applicable in this case are those relating to life actuarial risk (see chapter VI.16.3.2), market risk (see chapter VI.17.3), counterparty default risk (see chapter VI.18.3), and operational risk (see chapter VI.20.2). R+V Pensionskasse AG has largely stopped taking on new business. It is continuing to manage existing contracts as before.

The risk situation in a **pension fund** is determined to a significant degree by the nature of the pension plans offered. In pension plans offered by R+V involving defined contributions with a minimum benefit, it must be ensured that at least the sum of the contributions paid into the plan (net of any contributions covering biometric risk assumed by R+V) is available on the agreed pension start date.

R+V also offers pension plans that include guaranteed insurance-based occupational incapacity cover as well as pension benefits and benefits for surviving dependants. Market risk and all the risk types covered by actuarial risk are relevant as far as occupational pension provision is concerned. Longevity risk is also important in relation to pensions because of the guaranteed benefits involved. The risk management activities relating to life actuarial risk, market risk, counterparty default risk, and operational risk apply in this case. R+V aims to ensure that the ongoing pension plan contributions and the liability for remaining coverage include sufficient amounts to cover the costs of managing pension fund contracts.

In the pension plans involving a benefit commitment without any insurance-based guarantees, R+V does not assume responsibility for any of the pension fund risk or investment risk because the benefits promised by the pension fund are subject to the proviso that the employer will also make up any difference required. This also applies to the period in which pensions are drawn. If the employer fails to make up the difference required, R+V's commitment is reduced to insurance-based guaranteed benefits based on the amount of capital still available.

In purely defined-contribution plans, the amount of the lifelong payments depends on the value of the pension capital upon retirement and, subsequently, on the performance of the collateral assets for covering the current annuities. This means that there is a risk for pension beneficiaries that the payments may fluctuate – and,

specifically, may fall – depending on the value of the investment. Appropriate market risk management activities are carried out to counter this risk.

As at December 31, 2024, the **overall solvency requirement** for risks from entities in other financial sectors stood at €194 million (December 31, 2023: €217 million) with a **limit** of €265 million (December 31, 2023: €225 million). The reduction in risk was attributable to the lower forecast funding requirements of R+V Pensionskasse.

## VII Sustainability report

### 1 General disclosures

#### 1.1 Basis for preparation (BP-1, BP-2)

##### Brief summary

- Overarching disclosures on the report
- Presentation of legal basis, methodology, and underlying assumptions
- References to sources outside the sustainability report

This sustainability report has been prepared on a consolidated basis for the DZ BANK Group. It meets all requirements pertaining to the DZ BANK Group's sustainability statement in accordance with the European Sustainability Reporting Standards (ESRS) and the requirements pertaining to non-financial reporting obligations in accordance with sections 315b to 315c of the German Commercial Code (HGB, consolidated non-financial statement) and sections 289b HGB et seq. (non-financial statement of DZ BANK AG Deutsche-Zentralgenossenschaftsbank, Frankfurt am Main (DZ BANK)). The DZ BANK Group's sustainability statement has been prepared in full compliance with ESRS. This move forward from the previous comprehensive sustainability reporting of the DZ BANK Group is primarily due to the growing importance of ESRS in the EU.

The requirements of ESRS are addressed below. Firstly, the basis for preparation of this report is presented and an overview is provided of the materiality assessment performed. The report then covers the standards identified as material that relate to the environmental, social, and corporate governance spheres.

Unless indicated otherwise, the scope of application of the disclosures in this sustainability report is defined as follows:

- 'DZ BANK Group' refers to the scope of consolidation for the sustainability report; see 'Scope of consolidation for the sustainability report'.
- The term 'management unit' is used in accordance with the definition in chapter I.2.1.
- 'Banking group' refers to the entities included in the DZ BANK Group's scope of consolidation for regulatory purposes, as listed in chapter VI.2.1.5.
- The competence center environment (Kompetenzcenter Umwelt, KCU) comprises the following DZ BANK Group entities: BSH, DZ BANK, DZ HYP, DZ PRIVATBANK, R+V, Reisebank, TeamBank, UMH, VR Payment, and VR Smart Finanz (members of the KCU since 2014), plus VR Equitypartner and VR Factoring GmbH (members of the KCU since 2024).

##### Scope of consolidation for the sustainability report

The DZ BANK Group's sustainability report was prepared on a consolidated basis. The consolidation is carried out in accordance with the principles of the IFRS consolidated financial statements. The entities included in the consolidation are listed in note 03 (scope of consolidation) of the consolidated financial statements of DZ BANK as at December 31, 2024. The following entities that are not consolidated under IFRS have also been included: carexpert Kfz-Sachverständigen GmbH (carexpert, registered office in Mainz), R+V Service Center GmbH (registered office in Wiesbaden), and Sprint Sanierung GmbH (Sprint, registered office in Cologne). The reason for inclusion was the high number of employees in each entity and the resulting relevance from a sustainability perspective.

##### Coverage of the value chain

The entire value chain was taken into account when collating and evaluating the potential material impacts, risks, and opportunities during the materiality assessment.

#### Intellectual property

The DZ BANK Group has not taken up the option to omit information relating to intellectual property, know-how, or the results of innovation.

#### Time horizons

Reflecting its existing risk management processes, the DZ BANK Group uses the following time horizons in this report (in each case as at the reporting date):

- Short-term time horizon: period of up to 1 year (in line with the ICAAP economic perspective)
- Medium-term time horizon: period of 1 to 4 years (consistent with the DZ BANK Group's planning horizon)
- Long-term time horizon: periods of more than 4 years

#### Estimating and measuring parameters

The quantitative data referring to DZ BANK's own operations in this report is based on estimates using indirect sources and assumptions. This is due to a lack of available data or a high level of measurement uncertainty. The basis for preparation and the data's resulting level of accuracy are specified in the explanation of the data collection methodology for the relevant parameters in chapters VII.2.2.1 and VII.2.4.

As the availability of greenhouse gas emissions data was limited at the time of writing this report, data collation was supported, in some instances, by extrapolation of existing data and selected indicators, such as the number of employees, in order to produce estimates for the data that was unavailable. Information on the basis for extrapolation and the methods used for estimates can be found in chapters VII.1.4 and VII.2.4.

#### References to sources outside the sustainability report

The information listed in the following figure in this sustainability report is incorporated by reference to other sections of the group management report of the DZ BANK Group.

FIG. VII. 1: OVERVIEW OF REFERENCES TO OTHER CHAPTERS OF THE GROUP MANAGEMENT REPORT OF THE DZ BANK GROUP

| Information incorporated by reference                             | ESRS data point                           | Location in the sustainability report       | Reference (report)                              | Reference (chapter)                                                                                                                         |

Unless indicated otherwise, the references in this sustainability report do not form part of the report itself.

## 1.2 Disclosures stemming from other legislation or generally accepted pronouncements

#### Disclosures under HGB

This sustainability statement in accordance with ESRS meets the requirements of the

- DZ BANK Group's consolidated non-financial statement in accordance with sections 315b to 315c HGB and
- DZ BANK's non-financial statement in accordance with sections 289b et seq. HGB.

In order to meet the reporting obligations pursuant to the German Commercial Code, the following is stated for the DZ BANK Group:

- ESRS is used in full as the framework in accordance with sections 315c (3) in conjunction with 289d HGB for the first time due to the importance of ESRS as the standard accepted by the European Commission for sustainability reporting.
- There are no material risks in the DZ BANK Group's own operations or from business relationships, products, and services that are very likely to have severe negative impacts on non-financial aspects as defined in section 289c (3) no. 3 and no. 4 HGB.
- There are no non-financial key performance indicators as defined by section 289c (3) no. 5 HGB for the DZ BANK Group that are important to its business.

#### Disclosures under the EU Taxonomy Regulation

The disclosures in accordance with article 8 of Regulation 2020/852 (EU Taxonomy Regulation) for the DZ BANK Group in chapter VII.2.5 'Mandatory disclosures for the DZ BANK banking group under the EU Taxonomy' form part of the environmental information in this sustainability statement.

#### Supplementary disclosures to the non-financial statement of DZ BANK in accordance with section 289b HGB

- No generally accepted framework was used for the non-financial statement of DZ BANK as it is the group statement under ESRS that is relevant to the stakeholders.
- Unless presented otherwise, the policies, actions, and targets disclosed at group level are also pursued at the level of the parent entity.
- There are no material risks in DZ BANK's own operations or from business relationships, products, and services that are very likely to have severe negative impacts on non-financial aspects as defined in section 289c (3) no. 3 and no. 4 HGB.
- There are no non-financial key performance indicators as defined by section 289c (3) no. 5 HGB for DZ BANK that are important to its business.

## 1.3 Corporate management

### Brief summary

- Description of the remit, composition, and working methods of the administrative, management and supervisory bodies in a sustainability context, including the suitability of the members of the administrative, management and supervisory bodies for managing sustainability topics
- Reporting on the integration of sustainability matters into strategic planning and risk management
- Reporting on the integration of sustainability-related performance in incentive schemes
- Presentation of risk management and the internal control system that have been put in place for sustainability reporting

### 1.3.1 Involvement of the administrative, management and supervisory bodies in sustainability matters (GOV-1, GOV-2)

#### Supervisory and management bodies

The management units in the DZ BANK Group have a dual board structure. The requirements for the Board of Managing Directors and the Supervisory Board of DZ BANK with regard to the responsible and transparent management of the company are set out in applicable legislation, especially the German Stock Corporation Act (AktG), and have been implemented in the governance framework of DZ BANK. This applies, in particular, with regard to the composition of the two bodies and the way in which they perform their respective duties.

In the context of sustainability, the supervisory and management bodies of DZ BANK are informed of the results of the materiality assessment and presented with an overview of the material impacts, risks, and opportunities (IROs). The Boards of Managing Directors of the DZ BANK group entities represented on the Group

Sustainability Committee (GSC) are also informed. A detailed description of the materiality assessment can be found in chapter VII.1.5.

#### Supervisory Board

The Supervisory Board appoints, monitors, and advises the Board of Managing Directors and is directly involved in decisions of fundamental importance to the entities. The activities of the Supervisory Board are coordinated by the Chairman of the Supervisory Board. The Supervisory Board of DZ BANK and the Supervisory Boards of the group entities have adopted rules of procedure for themselves that govern the activities of the relevant Supervisory Board and its committees.

DZ BANK's Supervisory Board has 20 members. It comprises equal numbers of workers' representatives and shareholder representatives in accordance with the German Codetermination Act (MitbestG). The board positions occupied by workers' representatives must be allocated to non-clerical staff, clerical staff, and senior managers in a manner that reflects the relative proportions of these groups in the overall workforce. This ensures that the interests of workers' representatives, which may include employees as well as labor union representatives, are represented directly on the Supervisory Board. According to the bank's Articles of Association, only members of the managing body of a cooperative enterprise that is a shareholder of the bank may be elected as shareholder representatives on DZ BANK's Supervisory Board. The Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e. V. (BVR) [National Association of German Cooperative Banks] has the right to delegate one member of its Board of Managing Directors to the Supervisory Board. The Supervisory Board elects one of its members as its chairperson. The proportion of independent members on the Supervisory Board of DZ BANK was 15 percent as at December 31, 2024. The current composition of the Supervisory Board is disclosed in note 113 of the notes to the consolidated financial statements of the DZ BANK Group.

The composition of the Supervisory Board of DZ BANK broken down by gender and age is presented in Fig. VII.2. This breakdown reflects the number of members of the Supervisory Board in each age group and gender category as at the reporting date<sup>1</sup> and is based on the personal data submitted to DZ BANK by each Supervisory Board member.

FIG. VII.2: COMPOSITION OF THE BOARD OF MANAGING DIRECTORS BY GENDER AND AGE (AS AT THE REPORTING DATE)

|                    | 2024      |
|--------------------|-----------|
| <b>30 to 49</b>    | <b>2</b>  |
| of which male      | 2         |
| of which female    | -         |
| <b>50 or older</b> | <b>18</b> |
| of which male      | 13        |
| of which female    | 5         |
| <b>Total</b>       | <b>20</b> |
| of which male      | 15        |
| of which female    | 5         |

As a monitoring body, the Supervisory Board of DZ BANK scrutinizes all relevant business strategies as well as the business performance and the risk management of the DZ BANK Group. To ensure that it can discharge its responsibilities efficiently, the Supervisory Board of DZ BANK has formed the following standing committees: the Nominations Committee, the Audit Committee, the Risk Committee, the Remuneration Control Committee, and the Mediation Committee. In 2024, the Supervisory Board of DZ BANK reviewed the 2023 separate combined non-financial report and worked on planning and commissioning the review by the auditor of the 2024 non-financial statement of the DZ BANK Group and of DZ BANK AG. For the fourth year in succession,

<sup>1</sup> In this report, the term 'reporting date' refers to the final day of the reporting year, which corresponds to the final day of the DZ BANK Group's financial year, i.e. December 31.

the Supervisory Board received several hours of internal training with a strong emphasis on sustainability in the summer of 2024. The sustainability-related training in 2024 focused on sustainability management and CSRD.

The report of the Supervisory Board is published as part of the Annual Report and contains information on the tasks carried out by the Supervisory Board that are assigned to it by law, the Articles of Association, and rules of procedure. It provides information on fundamental and far-reaching conflicts of interests, on collaboration with the auditor, and on the nomination and appointment of new members of the Board of Managing Directors and Supervisory Board.

#### Board of Managing Directors

The Board of Managing Directors of DZ BANK is responsible for managing the company. Its members bear this responsibility jointly. The activities of the Board of Managing Directors are coordinated by the Chief Executive Officer. Rules of procedure govern the activities of the Board of Managing Directors of DZ BANK and the Managing Directors and the Boards of Managing Directors of the group entities. The remits of the individual board members are set out in a schedule of responsibilities. The rules of procedure and the schedule of responsibilities are signed off by the Supervisory Board. Responsibility for sustainability at DZ BANK lies with the Chief Executive Officer and the Employee Relations Director. Climate-related and environmental risks are overseen by the member of the Board of Managing Directors responsible for risk control and risk management.

The Board of Managing Directors and the Supervisory Board work closely together. The Board of Managing Directors discusses the strategic focus of the entity with the Supervisory Board and updates the Supervisory Board on the implementation status of the strategy at regular intervals. The rules of procedure for the Supervisory Board set out the transactions of fundamental importance that require the approval of the Supervisory Board. The Board of Managing Directors and the Supervisory Board should together make sure that the Supervisory Board has access to sufficient information.

In the interest of good and responsible corporate governance and group management, the members of the Board of Managing Directors of DZ BANK hold seats on the Supervisory Boards of the other DZ BANK Group entities. A key priority of this monitoring function is to ensure that the interests of the monitored entity are given due regard in accordance with the provisions of AktG and the German Private Limited Companies Act (GmbHG). The strategic positioning of DZ BANK and the entities in the DZ BANK Group within the Volksbanken Raiffeisenbanken Cooperative Financial Network means that the interests of the entities are typically well aligned.

With regard to the composition of the Board of Managing Directors, a resolution was passed on February 23, 2023, when the diversity policy was last updated, that set a target of 25 percent for the proportion of women (who are currently under-represented) on the Board of Managing Directors of DZ BANK (see also chapter VII.3.2.3). Up to June 30, 2024, the Board of Managing Directors of DZ BANK consisted of 2 Co-Chief Executive Officers and 7 other members. With the retirement of Co-Chief Executive Officer Uwe Fröhlich on June 30, 2024, the Board of Managing Directors consisted of one Chief Executive Officer and 7 other members from July 1, 2024 onward. As at the reporting date, the proportion of women on the Board of Managing Directors stood at 25 percent, as required by the diversity policy. The members of the Board of Managing Directors are listed in note 111 of the notes to the consolidated financial statements of DZ BANK. DZ BANK and other DZ BANK Group entities publish information on the professional experience and expertise of the members of their Boards of Managing Directors on their websites.

The composition of the Board of Managing Directors of DZ BANK, broken down by gender and age, is presented in Fig. VII.3. This breakdown reflects the number of members of the Board of Managing Directors in each age group and gender category as at the reporting date and is based on the personal data of each member of the DZ BANK Board of Managing Directors.

FIG. VII.3: COMPOSITION OF THE BOARD OF MANAGING DIRECTORS BY GENDER AND AGE (AS AT THE REPORTING DATE)

|                    | 2024     |
|--------------------|----------|
| <b>30 or 49</b>    | <b>3</b> |
| of which male      | 2        |
| of which female    | 1        |
| <b>50 or older</b> | <b>5</b> |
| of which male      | 4        |
| of which female    | 1        |
| <b>Total</b>       | <b>8</b> |
| of which male      | 6        |
| of which female    | 2        |

#### Individual and collective suitability of the Supervisory Board and Board of Managing Directors

In accordance with section 25d (11) sentence 2 nos. 3 and 4 of the German Banking Act (KWG), the Supervisory Board – with support from the Nominations Committee – has implemented a process for regularly evaluating the Supervisory Board and its members. The self-evaluation conducted by the Supervisory Board in February 2024 with the Nominations Committee's support found that the structure, size, composition, and performance of the Supervisory Board and the knowledge, skills, and experience of the individual Supervisory Board members and the Supervisory Board as a whole fulfilled the requirements laid down by law and in the Articles of Association. The Supervisory Board therefore confirmed the individual suitability of the individual members of the Supervisory Board and the collective suitability of the Supervisory Board as a whole. Following its annual evaluation, the Supervisory Board also signed off the updated profile of skills and expertise for the Supervisory Board.

DZ BANK also offers training opportunities to the members of the Supervisory Board, regardless of the period of time that they have been board members. This includes running inhouse training courses and covering the cost of supervisory board-related training programs offered by external providers.

Over the past 4 years, the Supervisory Board has continuously enhanced its sustainability-related knowledge and skills through annual training courses. In this context, the latest trends and general parameters were discussed, the DZ BANK Group's sustainability strategy was explained, and topics such as environmental, social, and corporate governance (ESG) instruments in the lending process, climate stress tests, and sustainability reporting were addressed. Relevant training topics are selected to reflect the individual requirements of the Supervisory Board members and issues related to the impacts, risks, and opportunities of sustainability matters. These include business portfolio changes as a result of climate change adaptation and mitigation, and the impact of the business portfolio's design on customer and stakeholder relationships. The provision of annual training for the Supervisory Board is intended to ensure that its members have the necessary expertise and skills to fulfill their supervisory role, in particular in relation to current focus areas.

Also in accordance with section 25d (11) sentence 2 nos. 3 and 4 KWG, the Supervisory Board has adopted a process for regularly evaluating the Board of Managing Directors as a whole and its members. The evaluation conducted by the Supervisory Board with the support of the Nominations Committee in February 2024 found that the structure, size, composition, and performance of the Board of Managing Directors, and the knowledge, skills, and experience of the individual members and the Board of Managing Directors as a whole fulfilled the requirements laid down by law and in the Articles of Association. The Supervisory Board therefore confirmed the individual suitability of each member of the Board of Managing Directors and the collective suitability of the Board of Managing Directors as a whole. The collective suitability of the Board of Managing Directors is partly based on an assessment of the skills and expertise relating to relevant sectoral/financial topics, including financial and capital markets, solvency and models, and ESG risks, which also encompasses skills and expertise in assessing the impacts, risks, and opportunities arising in connection with sustainability matters.

DZ BANK also offers various training courses to the members of the Board of Managing Directors, regardless of the period of time that they have been board members. For example, they can participate in training courses, conferences, and interactive formats through DZ BANK's Corporate Campus. The Corporate Campus is a platform for senior management in the DZ BANK Group that focuses on leadership, networking, and professional development with the objective of reinforcing the sustainability of the DZ BANK Group and the Volksbanken Raiffeisenbanken Cooperative Financial Network.

#### ESG governance and ESG organization

Sustainability is an interdisciplinary topic that is particularly integral to strategic planning processes, risk management, and lending processes. Many of the resolutions and business decisions adopted by the Board of Managing Directors and the Supervisory Board take due account of sustainability matters, both in terms of a positive impact on sustainable business and with regard to potential sustainability risks. The Group Sustainability Committee (GSC), the Group HR Committee (GHRC), and the Group Risk and Finance Committee (GRFC) are the main committees at Board of Managing Directors level responsible for monitoring the impacts, risks, and opportunities of the DZ BANK Group. The committees bring together the sustainability expertise of DZ BANK and the DZ BANK Group. Their purpose is to ensure that the business-policy and strategic decisions of the Board of Managing Directors and Supervisory Board factor in, and take adequate account of, the impacts, risks, and opportunities identified, particularly in the own operations and business portfolio dimensions. DZ BANK's reporting is designed to ensure that these issues are regularly addressed through the relevant reports to the governing and supervisory bodies.

The GSC was created in 2023 and focuses on the management and implementation of sustainability in the DZ BANK Group. One of its key tasks is to provide support for sustainability-related decision-making. It also informs the members of the Boards of Managing Directors represented on the committee of the results of the materiality assessment. In addition, it serves as a platform for strategic decisions relating to sustainability. The GSC makes decisions on the IROs that, under ESRS, are regarded as material to the DZ BANK Group and require action to be action. It reports regularly to the Group Coordination Committee. Its members comprise the Board of Managing Directors of DZ BANK and the chief executive officers of BSH, DZ HYP, DZ PRIVATBANK, R+V, TeamBank, UMH, and VR Smart Finanz. In addition to the GSC, there is a sustainability coordination committee made up of the sustainability officers in the management units. The sustainability coordination committee is an operational committee that is subordinate to the GSC and provides a platform for the sharing of information on the latest sustainability-related developments and activities across the group. Led by DZ BANK, the sustainability coordination committee identifies key issues relevant to the whole of the group, initiates joint projects, and prepares decisions to be made by the GSC.

The GHRC comprises the members of the Board of Managing Directors responsible for HR, or the Employee Relations Directors, of the BSH, DZ BANK, DZ HYP, DZ PRIVATBANK, R+V, TeamBank, UMH, and VR Smart Finanz management units. The committee coordinates relevant HR matters across the group in accordance with the group governance policy (see chapter VII.0) and submits sustainability-related requirements for group-level decisions to the Group Coordination Committee. The GHRC initiates and coordinates HR matters affecting multiple companies across the group, leveraging opportunities for synergies. It also coordinates the groupwide implementation of regulatory requirements concerning HR systems. Social responsibility has been enshrined in the DZ BANK Group's HR strategy, which was adopted by the GHRC, since 2022. The GHRC, which meets several times a year, facilitates the sharing of HR policy information within the DZ BANK Group.

The GRFC is the central committee in the DZ BANK Group responsible for proper operational organization and, in particular, risk management in accordance with section 25 of the German Supervision of Financial Conglomerates Act (FKAG) and section 25a KWG. It assists DZ BANK with groupwide financial and liquidity management, risk capital management, and recovery and resolution planning. It also supports the Group Coordination Committee (GCC) in matters of principle. The members of this committee include the relevant executives at DZ BANK responsible for finance, risk, and treasury. The committee members also include execu-

tives at various subsidiaries. The GRFC has set up 8 working groups that focus on addressing specific risk facets. ESG risks are managed centrally at the level of the DZ BANK Group and on a decentralized basis at the level of the management units. DZ BANK is currently working on implementing various regulatory requirements regarding the management of ESG risks as part of its Advancing Sustainability program. The main requirements are the guide on climate-related and environmental risks of the European Central Bank (ECB), the guidelines on loan origination and monitoring of the European Banking Authority (EBA), the delegated regulation on the EU Taxonomy, and the EBA's ESG disclosure requirements. DZ BANK's Board of Managing Directors lays down the core risk policy guidelines and decisions and bears responsibility for them. It defines the company-wide framework for risk appetite and risk-bearing capacity, as well as the risk management targets and the actions taken to achieve them. It also encompasses all sustainability matters and their impacts, risks, and opportunities for DZ BANK and the DZ BANK Group. In consultation with the GSC, GHRC, and GRFC, the Board of Managing Directors checks the related targets – and their achievement – and communicates them through DZ BANK's reporting channels to the Supervisory Board for oversight purposes.

The Board of Managing Directors reports in detail to the Supervisory Board of DZ BANK once a year about the updating of the risk strategies and the status and further development of the risk management system of DZ BANK and the DZ BANK Group. Using the overall risk report, the Board of Managing Directors reports to the Supervisory Board about the risk situation four times a year. The risks covered in the reporting include operational risk resulting from environmental and climate-related aspects, market risk stemming from problems relating to energy and pollution, and reputational risk in own operations and the business portfolio, for example due to discrimination or insufficient consideration of appropriate working conditions. At the same intervals, the Board of Managing Directors also reports on the credit portfolio and on portfolio-specific and exposure-specific management information, for example regarding the risk of higher probabilities of default and lower collateral values as a result of climate change adaptation. The Supervisory Board is also regularly informed about significant investment exposures. It discusses these issues with the Board of Managing Directors, advises it, and monitors its management activities. The Supervisory Board is involved in decisions of fundamental importance.

The Supervisory Board has set up a Risk Committee, which addresses issues related to overall risk appetite and risk strategy. Four times a year, the other Supervisory Board members are informed of the material results of the Risk Committee's work in the Risk Committee Chairman's reports during Supervisory Board meetings and in the minutes distributed to them. In addition, the Audit Committee regularly examines the effectiveness of the internal control system, risk management system, and internal audit. It passes on important information to the other Supervisory Board members in the Audit Committee Chairman's reports during Supervisory Board meetings and by distributing the minutes from Audit Committee meetings to the other Supervisory Board members.

The group entities' compliance with the risk strategies is monitored on an ongoing basis. The Board of Managing Directors receives frequent updates on the general risk situation in connection with the defined risk appetite, primarily in the form of a monthly overall risk report that comprises economic and regulatory key risk indicators. This report is supplemented with further quarterly reports on adverse stress tests and information on specific types of risk. The annual alignment and updating of the risk strategies is also a core element of the strategic planning process and is conducted in close collaboration with the relevant divisions and affected group entities.

### 1.3.2 Sustainability-related incentive schemes (GOV-3)

During the annual target agreement process, targets are agreed with the members of the Boards of Managing Directors and the managing directors in the subgroups. These targets are based on the DZ BANK Group's strategic planning. The subordinated entities then filter these targets through to the lower hierarchy levels via a cascading structure, helping to ensure that the DZ BANK Group's strategic objectives can be achieved.

The remuneration systems of the DZ BANK Group are designed in a way that supports the sustainability-oriented culture and strategy in the DZ BANK Group. The remuneration does not incentivize excessive risk-taking in any way. The DZ BANK Group includes sustainability risks in its remuneration policy. The group's remuneration systems are aligned with its ESG goals. The remuneration systems are linked to the individual business, risk, and sustainability strategies and should be consistent with the content of those strategies. In fulfillment of its management function, DZ BANK encourages the integration of sustainability risks into the remuneration systems in the banking group.

The variable remuneration of the members of the DZ BANK Board of Managing Directors accounts for 20 percent of their target remuneration. The variable remuneration of 20 percent is structured as maximum remuneration. Multi-year targets are used to calculate the variable remuneration of members of the Board of Managing Directors. The variable remuneration is determined in a way that takes due regard of the risk-bearing capacity, multi-year capital planning, and financial performance of the bank and the group.

Derived from the groupwide sustainability strategy, which is integrated into the DZ BANK Group's corporate strategy, 25 percent of the entity targets at the level of the Boards of Managing Directors relate to sustainability. These targets, which are qualitative and quantitative in nature, can be broken down into environmental (10 percent), social (10 percent), and corporate governance (5 percent) components. The environmental component includes the advancement of sustainability, HR-related targets are enshrined in the social component, and one of the corporate governance goals is to increase the proportion of women in leadership positions. In the environmental component, climate targets such as reducing carbon emissions from own operations and sectoral decarbonization targets relating to the business portfolio are included in the evaluation of target achievement. An overall assessment in all 3 ESG components is used to determine the variable remuneration of the members of the Board of Managing Directors.

In the institutions in the DZ BANK Group, the committees and functions described below are involved in designing and monitoring the remuneration systems. The design and implementation of the remuneration system for the Board of Managing Directors of a particular entity in the DZ BANK Group are decided upon by the Supervisory Board. The Supervisory Board also checks that the employee remuneration systems are appropriate. The Remuneration Control Committee and, in the case of smaller entities, its representative committees assist the Supervisory Board with its tasks. These primarily consist of monitoring the appropriate design of the remuneration systems and their conformity with the business and risk strategies, the remuneration strategy, and the corporate culture of the DZ BANK Group. The individual members of the Boards of Managing Directors contribute to the implementation of and compliance with the German Remuneration Regulation for Institutions (InstitutsVergV) in the institutions in the DZ BANK Group through their membership of the Supervisory Boards of the subsidiaries. In each entity, a remuneration officer assists the Remuneration Control Committee and Supervisory Board with their monitoring activities and is involved in deployment of the remuneration systems, the development of new systems, and the refinement of existing systems on a regular basis. The HR division carries out HR-related preparations for the design of the remuneration systems and the decisions of the Board of Managing Directors, which it also puts into practice. As part of their leadership and management role, managers deploy the performance management and remuneration tools provided to them. The control units as defined by section 2 (11) InstitutsVergV are involved in the design and monitoring of the remuneration systems on an ongoing basis. Each institution in the DZ BANK Group has defined its control units. The institutions make sure that employees in the control units are remunerated independently of the divisions that they oversee. Pursuant to section 5 (4) InstitutsVergV, this is the case if the amount of variable remuneration of employees in the control units and of employees in the organizational units overseen by them is not predominantly determined by the same remuneration parameters and there is no risk of a conflict of interests.

Information on employee remuneration can be found in chapter VII.3.2.4. The members of the Supervisory Board of DZ BANK receive fixed annual remuneration. They are not granted variable remuneration, and there are no sustainability-related financial incentives.

### 1.3.3 Statement on due diligence (GOV-4)

The following figure provides an overview of the sections of the sustainability report covering the most important aspects of the DZ BANK Group's due diligence process and the steps taken. Due diligence is the process by which undertakings identify, prevent, mitigate, and account for how they address the actual and potential negative impacts on the environment and people connected with their business. These include negative impacts connected with the undertaking's own operations and its upstream and downstream value chain, including through its products or services, as well as through its business relationships.

FIG. VII.4: OVERVIEW OF THE CORE ELEMENTS OF DUE DILIGENCE AND THEIR LOCATION IN THE SUSTAINABILITY REPORT

| Core elements of due diligence                                            | Location in the sustainability report                                                                                                                                                                                                                                                                                                                                                                                                               |

### 1.3.4 Risk management and the internal control system in the sustainability report (GOV-5)

The documentation of DZ BANK's processes of relevance to risk is governed by the bank-wide rules on standardized documentation and forms part of the operational and organizational structure. DZ BANK has established a bank-wide internal control system (ICS). It is explained in greater detail in chapter VI.3. DZ BANK is guided by these processes and structures when it comes to risk management (including the ICS) in respect of sustainability reporting. The gradual integration of sustainability matters in the report content for the first reporting year into the existing ICS, such as the communication of identified deficiencies to DZ BANK's administrative, management, and supervisory bodies, is due to be completed in 2025.

One of the risks relating to sustainability reporting is the risk of incomplete or incorrect disclosures. To minimize this risk, the report's content is checked by a second person in the responsible department and signed off by the responsible Heads of Division.

The processes, the risks, and the controls implemented for minimizing risk that are identified in the context of sustainability reporting are recorded centrally in a written set of procedural rules. All control activities, such as checks by a second person (or more), validation, and reconciliation, must be documented by defined process

owners. In addition, short-term and long-term actions are taken on an ongoing basis with the specific aim of refining the sustainability reporting ICS. The basis for this refinement is the maturity level determined for the process and control documentation.

Where required by law or by regulatory provision, DZ BANK has established a compliance function. The main tasks of this function are to identify, manage, and mitigate compliance risk in order to protect the entity and its employees and customers against breaches of legal provisions and requirements. The compliance function is also responsible for mitigating risks arising from non-compliance with the legal provisions and requirements. Internal Audit at DZ BANK performs monitoring and control functions. It carries out risk-oriented evaluations and reviews that are independent of individual processes. The focus is on compliance with statutory and regulatory requirements, the appropriateness and effectiveness of risk management, and the control system for accounting and reporting processes. It also checks that all activities and processes are carried out properly, regardless of whether they are outsourced or not. These checks incorporate rules relating to sustainability. More information can be found in chapter VI.3.

When work on sustainability topics leads to the introduction of new products or markets, the control units must be involved through the established processes for new products.

Responsibility for preparing and checking the quantitative and qualitative information required for the DZ BANK Group entities' sustainability reporting lies with the group entities themselves. The methods and content to be used within the DZ BANK Group for sustainability reporting are set out in writing in a group manual. Using the relevant document, each group entity confirms to DZ BANK that the content it has provided is complete and accurate.

## 1.4 Strategy and business model

### Brief summary

- Presentation of the DZ BANK Group's strategy and business model, including the value chain
- Explanation of the strategy and targets in connection with sustainability
- Disclosures on the DZ BANK Group's stakeholder groups

### 1.4.1 Strategy, business model, and value chain of the DZ BANK Group in a sustainability context (SBM-1)

The DZ BANK Group forms part of the Volksbanken Raiffeisenbanken Cooperative Financial Network, which primarily comprises around 700 cooperative banks and is one of Germany's largest private-sector financial services organizations measured in terms of total assets. The DZ BANK Group focuses its strategy on the local cooperative banks. In doing so, it pursues the objective of consolidating the positioning of the Cooperative Financial Network over the long term as one of the leading financial services providers in Germany. The DZ BANK Group supports the cooperative banks by providing an extensive range of financial products and services in the Retail Banking, Corporate Banking, Capital Markets, and Transaction Banking business lines. These financial products and services encompass banking, insurance, home savings, and investment. This partnership is built on the principles of subsidiarity, decentralization, and regional market responsibility. The business of the DZ BANK Group is primarily focused on the German market.

Fig. VII.5 provides a breakdown of the DZ BANK Group's employees by geographical area.

FIG. VII.5: BREAKDOWN OF THE DZ BANK GROUP'S EMPLOYEES BY GEOGRAPHICAL AREA

|                | 2024          |
|----------------|---------------|
| Germany        | 35,729        |
| Rest of Europe | 2,082         |
| Rest of world  | 388           |
| <b>Total</b>   | <b>38,199</b> |

Within the Cooperative Financial Network, Frankfurt-based DZ BANK functions as the central institution and is responsible for supporting the business of the cooperative banks in their regions. It also operates as the central institution and corporate bank and is the holding company for the DZ BANK Group. Its range of products and services extends from classic and innovative financial products, structured finance, and capital market issues, to trading and sales in the equity and bond markets. DZ BANK also supports companies and institutions that need a nationwide banking partner.

#### Value chain of the DZ BANK Group

The DZ BANK Group's upstream value chain covers the activities of upstream business partners, i.e. undertakings that provide the services that entities in the DZ BANK Group require to be able to carry out their activities. The value chain can be broken down into the following categories: suppliers, including municipal utility companies, data and technology vendors, and office materials suppliers; and service providers such as consultancy, security, marketing, advertising, and catering companies. The DZ BANK Group's business operations encompass its employees, facilities management, and IT infrastructure, and these represent the main inputs for value creation in the DZ BANK Group. More information on employees can be found in chapter VII.3.2.

Value creation in the DZ BANK Group takes place in the aforementioned areas of business covered by the DZ BANK Group's portfolio of financial products and services. The different areas of business of the DZ BANK Group and their output, i.e. the specific products and services offered, are described in chapter I.1. In that chapter, there is also information on the relationship between DZ BANK and the individual management units, which are integrated into the groupwide management of the aforementioned business lines.

The downstream value chain covers the activities of the downstream business partners that use the DZ BANK Group's products and services and whose activities are related to these products and services. The downstream value chain primarily comprises the local cooperative banks, which act as sales partners for the Cooperative Financial Network, and the companies that receive finance, along with their activities.

R+V's value chain primarily encompasses the insurance business, from product development to claims settlement, and the investment of insurance premiums. Reflecting the understanding that has been typical across the industry until now, investments are not considered to be part of R+V's own operations. Furthermore, the value chain includes the secondary activities of the business that are necessary for running the insurance business.

#### Strategy in connection with sustainability

Sustainability is firmly embedded in the corporate values and strategy of the DZ BANK Group, which wishes to play its part in the transition to a sustainable economy. Sustainability is incorporated into the strategy of the DZ BANK Group and DZ BANK at various levels. The material environmental impacts identified in the materiality assessment relate to the lending business, specifically lending in industries that are particularly relevant to decarbonization ('focus sectors'). Target-oriented sector pathways have been established for the decarbonization of these sectors. The material social impacts in the DZ BANK Group's own operations relate to employees, specifically working conditions, equal treatment / non-discrimination, and other labor rights. The HR strategy takes the material impacts into account. The impacts on workers in the value chain relate to the downstream value chain and are factored into the implementation of the group credit standard. With regard to affected

communities, the material impacts from the DZ BANK Group's activities arise in its own operations and in the downstream value chain. The own operations of various DZ BANK Group entities strategically support affected communities through charitable projects. The Equator Principles are applied in project finance with regard to the downstream value chain. The impacts on consumers and end-users are only considered in the downstream value chain. The DZ BANK Group's compliance function is intended to protect customers from potential negative impacts. In addition, the DZ BANK Group has product guidelines designed to safeguard the quality of product development and sales. In the area of corporate governance, the purpose of the group governance policy, which defines the standards of good and responsible corporate governance, is to address material impacts related to business practices, corporate culture, corruption, and bribery in own operations and the business portfolio as well as through supplier relationships and payment practices in own operations.

Strategic initiatives and programs are developed and implemented at the following 3 levels in the DZ BANK Group in order to integrate all business segments and customer groups in the sustainability strategy process: firstly, at the level of the Cooperative Financial Network, with the BVR taking the leading role; secondly, at the level of the DZ BANK Group; and thirdly, at the level of the individual entities in the DZ BANK Group, which may draw up their own specific strategic programs. As regards overarching strategic projects and initiatives for the entire Cooperative Financial Network, the entities in the DZ BANK Group work in partnership with the cooperative banks, Atruvia AG (IT service provider of the cooperative banks), and the BVR on the action areas in the strategic agenda and other strategically relevant topics, such as digitalization and sustainability. At DZ BANK Group level, the entities jointly identify and press ahead with material areas of potential for reinforcing their shared future viability and profitability. Furthermore, each entity in the DZ BANK Group pursues its own strategic initiatives.

Sustainability topics are tackled centrally within DZ BANK's Advancing Sustainability program. Specific targets, policies, and actions are developed in various projects and working groups involving a number of DZ BANK Group entities. Details can be found in the topic-specific chapters covering the environment, social matters, and governance.

#### Strategic planning process (SPP) and the sustainability area of potential in the DZ BANK Group

The DZ BANK Group entities define their business strategy, including the strategic direction, targets, and actions, as part of the annual SPP. These plans are discussed in strategic dialogue sessions at the level of the Board of Managing Directors and then taken forward to the consolidated strategic planning stage for the DZ BANK Group. This is reflected in the DZ BANK Group's business strategy. Sustainability has to be treated as a key topic in all strategic dialogue within the DZ BANK Group and evaluated against the backdrop of changing regulatory and market conditions. The subject is discussed in terms of opportunities and risks. Sustainability has also been defined as an area of potential in the DZ BANK Group. In the context of collaboration at DZ BANK Group level, areas of potential serve to reinforce their shared future viability and profitability. The DZ BANK Group entities worked together to identify and refine these areas, which are being coordinated at group level by the Strategy & Group Development division of DZ BANK for the purposes of the SPP. The Group Sustainability Committee (GSC) is responsible for the sustainability area of potential.

In 2024, the SPP was also used to identify the key sustainability issues applicable to each of the group entities, as the priorities vary according to business model:

- BSH offers its customers an extensive portfolio of products and services designed to support the transition to climate-friendly policies in the residential real estate sector. The portfolio includes information and awareness-raising offerings on the website as well as advisory services from certified development lending advisors. The FuchsEco home savings product and various loan types allow customers to select a suitable financing arrangement for renovation work aimed at improving energy efficiency. In addition to tapping into further sustainability-related market and sales potential, BSH intends to increasingly forge ahead with the issuance of green Pfandbriefe in the future.

- In its capital markets business with institutional clients, DZ BANK plans to continue strengthening its sustainability profile – particularly in primary market business for bonds – and to further expand its sustainability expertise and its ESG-related business activities. The range of sustainable investment products on offer in the securities business with retail customers is also to be extended. In the Corporate Banking business line, companies are to receive medium-term and long-term support as they transition to greater sustainability. The financing of investment aimed at achieving sustainability targets is a strategic priority topic for corporate banking in Germany and abroad and for investment promotion.
- DZ HYP issues green Pfandbriefe and aims to support the sustainable transformation of the real estate industry through its banking business.
- DZ PRIVATBANK also offers various solutions for sustainability-minded customers and aims to increasingly tighten the focus of its range of international and sustainable investment solutions in the asset management business.
- R+V joined the Net-Zero Asset Owner Alliance in 2023 and signed up to the Principles for Sustainable Insurance (PSI) in 2021, underlining its voluntary commitment on a fully climate-neutral basis by 2050 and to make insurance more sustainable.
- The strategic focus of TeamBank is on promoting equal opportunities in society. As a liquidity partner for retail customers in Germany and Austria, the emphasis is on customer requirements and on responsible lending for a sustainable customer relationship.
- UMH aims to support the sustainability efforts of clients in its institutional asset management business and continues to expand its product range with a focus on sustainability-oriented institutional mutual funds. In addition, it intends to broaden its offering of sustainability-oriented products for retail customers. Under its climate strategy, Union Investment plans for its securities and commercial real estate portfolios to be climate-neutral by 2050.
- VR Smart Finanz plans to continue to step up its sustainability activities by offering greater assistance to customers – particularly small and medium-sized enterprises (SMEs) – as they transition to more sustainable business models.

#### Verbund First 4.0 and the Advancing Sustainability program at DZ BANK

At DZ BANK, the strategic initiatives designed to ensure the bank's resilience for the future are brought together in the 'Verbund First 4.0' strategic program. The program is aimed at improvements in three key areas: market offering, control and production processes, and corporate culture. Verbund First 4.0 is updated continually in line with requirements. Related topics, such as sustainability, digitalization, and employer branding, are key elements of the transformation of the economy. The program is divided into implementation packages, including one package dedicated specifically to sustainability topics. The aims include satisfying regulatory requirements relating to sustainability and creating transparency in order to provide a basis for strategic decisions about the future focus of sustainability activities.

Since 2022, the associated actions have been implemented primarily as part of DZ BANK's Advancing Sustainability program (see Fig. VII.6). The aim of the Advancing Sustainability program is to develop sustainability at a strategic and operational level and to embed it in the organization in order to strengthen the role of DZ BANK in supporting customers' transformation and satisfy regulatory requirements. The program focuses on both the outside-in and the inside-out perspective. The outside-in perspective primarily covers the management of climate-related and environmental risks against the backdrop of the ECB's expectations in this context. Approaches and metrics for matters relating to sustainability risks are being developed as part of the program. With regard to the inside-out perspective, also known as the impact perspective, the umbrella program specifically covers matters such as climate alignment and carbon accounting, sustainable development goals

(SDG) mapping, the setting of climate targets, and active supply chain management. This includes integrating qualitative and quantitative ESG assessments into the lending process, conducting climate stress tests, and implementing statutory ESG disclosure requirements.

The Strategy & Group Development division of DZ BANK manages the program. Other divisions that are involved include Credit, Group Risk Control & Services, Group Risk Controlling, Compliance, Group Human Resources, Central Corporate Banking, Structured Finance, Group Finance, Group Financial Services, and IT. The program creates the foundations on which to achieve DZ BANK’s sustainability vision, which includes further development of the sustainability strategy, the anchoring of sustainability aspects within the governance structure, the integration of ESG factors into the operating model, and the establishment of the sustainability-related IT infrastructure. The structure of the program is intended to facilitate the content-related and organizational aspects of collaboration between the projects included in the program and the management of interdependencies between individual projects, and to make it possible to leverage synergies in implementing the IT infrastructure and coordinate the communication of overall progress to the Board of Managing Directors.

The following figure shows the sustainability-related steering committees in the DZ BANK Group, plus DZ BANK’s ESG organization.

FIG. VII.6: ADVANCING SUSTAINABILITY UMBRELLA PROGRAM OF DZ BANK IN 2024

Sustainability targets

In 2020, the 17 sustainable development goals (SDGs) of the United Nations (UN) were determined as the overarching classification framework for the business activities of the DZ BANK Group entities. This is consistent with the objectives of the Cooperative Financial Network, which regards the SDGs as a core component of its sustainability strategy.

With this in mind, DZ BANK has formulated a variety of sustainability goals that are used in the performance assessment of the DZ BANK Board of Managing Directors and others. These include quantitative goals as well as improving the quality of every aspect of ESG within the organization. The Board of Managing Directors and the Supervisory Board are updated regularly on progress with the achievement of these goals.

#### 1.4.2 Interests of stakeholder groups (SBM-2)

Representatives of companies and organizations that influence the DZ BANK Group's activities at an economic, environmental, or social level and/or are impacted by its activities, are considered to be important stakeholders, as are employees. Overall, the DZ BANK Group has identified 15 stakeholder groups with whom it engages in dialogue through a range of communication channels. These are listed in Fig. VII.8 in chapter VII.1.5.

In the year under review, the regular strategy events held by Atruvia, the BVR, and DZ BANK in collaboration with the Cooperative Financial Network's regional banking associations were again combined into a multi-company format entitled 'Strategie-Hub Regional 2024' with a series of 4 regional events. The objective is to facilitate dialogue on shared strategic topics in order to strengthen the Cooperative Financial Network's strategy and, for reasons of efficiency, to reduce the number of events covering similar subjects. Furthermore, network committees ensure that the cooperative banks are closely involved in DZ BANK's strategic considerations and initiatives.

A body of particular strategic importance is the DZ BANK Group's Central Advisory Council, which ensures that the cooperative banks are involved in material strategic decisions of the DZ BANK Group. The council comprises 33 members from the Boards of Managing Directors of cooperative banks plus other important officeholders from within the Cooperative Financial Network. The meetings of the Central Advisory Council are also attended by the Board of Managing Directors of DZ BANK and the chief executive officers of the largest group entities. DZ BANK facilitates communication and information sharing with the cooperative banks through various dialogue events, such as a virtual spring conference and in-person autumn conferences. In addition, the sustainability conference that DZ BANK had previously organized by itself for cooperative banks was transformed into a joint event with the BVR, Atruvia AG, and DG Nexolution eG in 2024. This sustainability meet-up serves as a platform for information sharing, dialogue, and networking for the cooperative banks. Furthermore, 2 regional banking dialogue events on the subject of sustainability took place at various sites in 2024.

Stakeholders are surveyed in order to find out about their interests and collect any suggestions. Regular surveys also take place at BSH, R+V, and TeamBank that allow customer satisfaction to be measured systematically on the basis of the Net Promoter Score. All DZ BANK Group entities conduct regular employee surveys (see chapter VII.3.2.1). In addition, the DZ BANK Group entities use various discussion formats to engage in dialogue with national and international stakeholders. The Entrepreneur Advisory Board meets twice per year, bringing the Board of Managing Directors of DZ BANK together with corporate customers and other representatives from academia, politics, and industry associations and providing an opportunity to discuss current business developments, trends, and experiences. UMH organizes an annual sustainability conference for institutional clients, where the speakers are drawn from the worlds of business and academia. DZ HYP maintains regular contact with its stakeholders by holding Advisory Board meetings and organizing a variety of events for real estate customers and the Cooperative Financial Network. In addition, experts from DZ BANK maintain a regular dialogue with institutional investors at home and abroad, for example during conferences and roadshows focused on sustainability.

In 2024, DZ BANK was approached by non-governmental organizations (NGOs) and media outlets with a range of inquiries and matters that were investigated and addressed. Matters raised by stakeholders predominantly focused on climate change and decarbonization as a result of the transition away from fossil fuels and on human rights.

1.5 Materiality assessment

Brief summary

- Explanation of the materiality assessment used to determine the scope of the report
- Presentation of the process and disclosures on the materiality assessment’s stakeholders and participants
- Presentation and explanation of the results of the materiality assessment
- Overview of EU legislation in the report

1.5.1 The materiality assessment process (IRO-1)

Materiality assessment

A materiality assessment was carried out for the DZ BANK Group to define the material data points that must be reported in 2024. The materiality assessment is divided into the following steps:

1. Identifying the DZ BANK Group’s potentially material impacts, risks, and opportunities
2. Engaging with the DZ BANK Group’s stakeholders
3. Evaluating the material impacts, risks, and opportunities identified for the DZ BANK Group
4. Quantifying the impact materiality for the DZ BANK Group
5. Evaluating the risks for the DZ BANK Group

Identifying the DZ BANK Group’s potentially material impacts, risks, and opportunities

Using the Implementation Guidance DRAFT EFRAG IG 1 (November 6, 2023) of the European Financial Reporting Advisory Group (EFRAG) as a guide, 15 relevant sustainability topics for the DZ BANK Group were determined at the sub-topic level (see Fig. VII.7), which provide the basis for identifying the IROs. No additional sustainability topics were identified for the DZ BANK Group. The sustainability topics were examined and evaluated in two dimensions: business portfolio and own operations. The DZ BANK Group’s IROs are mainly found in the business portfolio, and thus outside of own operations. This does not apply to the ‘own employees’ topic, which – in accordance with ESRS S1 – can only be examined within the group’s own operations.

FIG. VII.7: MATERIAL TOPICS OF THE DZ BANK GROUP

With regard to affected business activities and stakeholders, the DZ BANK Group's relevant potential and actual impacts on people and the environment, both positive and negative, and its risks and opportunities were determined for the identified sustainability topics and initially recorded in an IRO catalog. Negative effects often resulted in direct financial risks, while positive effects were reflected in the form of opportunities. IROs specific to business lines were also formulated, for example in relation to the insurance business or asset management, during the analysis of the DZ BANK Group entities. The collation of IROs was based on various internal sources, including the business environment analysis and the risk inventory check, for mapping the DZ BANK Group's specific business models.

The DZ BANK Group does not conduct any material business activities in which impacts, risks, and opportunities related to water and marine resources may arise. Furthermore, it does not conduct any material business activities in which impacts, risks, and opportunities related to the circular economy may arise. This was determined in the materiality assessment based on the methodology described above.

In its assessment of risks and opportunities that have or may have financial effects, the DZ BANK Group does not – unlike for other types of risk – set priorities for sustainability risks. This is because the DZ BANK Group views sustainability risks as risk factors for the established financial and non-financial risks, for which it carries out an annual ESG risk driver analysis.

The ESG risk analysis forms part of the capital/earnings (ICAAP) dimension in the annual group risk inventory check. Examining the significance of ESG risks is also an established part of the liquidity (ILAAP) dimension of the risk inventory check. ESG risks that are material are fully integrated into the subsequent processes, such as the determination of risk appetite, the definition of risk strategies, and the selection of methods for measuring, monitoring, and reporting on risks. The regular process for identifying, evaluating, and subsequently managing sustainability risks is therefore integrated into general risk management in the DZ BANK Group.

IROs relating to financial and non-financial risks were formulated on the basis of the DZ BANK Group's ESG risk analysis, which already covers most ESRS topics. The ESG risk analysis provides a list of potentially material and non-material ESG risk factors to which the ESRS sustainability matters can be assigned accordingly. The ESG risk analysis in 2024 covered all topics relating to ESRS sustainability matters. The analysis drew primarily on external sources, such as the S&P Risk Atlas, the Sustainable Development Goal Index, and the Environmental Performance Index, in order to examine ESG-specific risks in terms of geographical features and the sectors in which business partners operate.

The process for the ESG risk analysis was refined in 2024. In particular, the nature-related risk factors identified were divided into nature-related physical risks and nature-related transition risks, as is also done for climate risks.

#### Engaging with the DZ BANK Group's stakeholders

According to ESRS, stakeholder engagement is an integral part of the materiality assessment. Relevant stakeholders were represented in workshops by internal contacts during the assessment of the DZ BANK Group's positive and negative impacts on people and the environment and of its sustainability-related financial opportunities. This ensured that the interests and views of relevant stakeholders with regard to the sustainability matters that affect them were included in the materiality assessment.

Relevant stakeholder groups were selected on the basis of the ESRS requirements and on the basis of the relevant stakeholder groups established by the DZ BANK Group for its previous sustainability reporting. The participating entities in the DZ BANK Group mirrored those belonging to the DZ BANK Group's CSRD reporting working group,<sup>2</sup> namely the management units plus Reisebank and VR Payment. When assigning internal con-

<sup>2</sup> The following group entities were added to the CSRD reporting working group in connection with sustainability reporting: VR Factoring GmbH and VR Equitypartner.

tacts to the stakeholder groups, it was imperative that the contact person has sufficient knowledge of the sustainability topics and interests of their assigned stakeholder group, as a result of their work in the DZ BANK Group, in order to carry out a materiality assessment (see Fig. VII.8).

No specific consultation of affected communities in relation to pollution, water and marine resources, biodiversity and ecosystems, and resource use and circular economy was carried out for the materiality assessment. Instead, the concerns of the affected communities were taken into account by surveying internal stakeholders as part of the qualitative materiality assessment.

Evaluating the material impacts, risks, and opportunities identified for the DZ BANK Group

According to ESRS 1, a sustainability matter is material if it is assessed as material from either the inside-out perspective (impact materiality) or the outside-in perspective (financial materiality), in line with the principle of double materiality. Where an IRO associated with a sustainability topic is assessed as material, this topic is rated material in its entirety for the relevant dimension (own operations and/or business portfolio).

#### Assessment methodology

The impact assessment is based on an evaluation of the severity of the impacts and how likely they are to occur (in the case of potential impacts) and the extent to which they can be remedied (in the case of negative impacts). The time horizon is also taken into account. 2 factors determine the severity: 'extent' (how severe are the impacts?) and 'scope' (how far-reaching are the impacts?). An overview of the material impacts and their time horizons can be found in Fig. VII.9.

FIG. VII.9: OVERVIEW OF THE MATERIAL IMPACTS AND THEIR TIME HORIZONS

| Impact                                             | Content                                                                                                                                                       | Time horizon |
|----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <b>E1-1: Climate change adaptation</b>             |                                                                                                                                                               |              |
| Positive impact                                    | Providing incentives for more sustainable practices/action through financing/insurance and bonuses for / investment in 'sustainable solutions'                | Short term   |
| Positive impact                                    | Financing / insuring / investing in projects that improve the resilience of borrowers / insurees / investee companies regarding the impacts of climate change | Short term   |
| Negative impact                                    | Creating perverse incentives because adaptation measures have not been taken into account in investment decisions or when agreeing finance/insurance          | Medium term  |
| <b>E1-2: Climate change mitigation (emissions)</b> |                                                                                                                                                               |              |
| Positive impact                                    | Directing capital toward sustainable investments through exclusion criteria or sector criteria                                                                | Short term   |
| Positive impact                                    | Financing / investing in / insuring projects that reduce greenhouse gas (GHG) emissions and taxonomy-aligned products                                         | Short term   |
| Positive impact                                    | Supporting/facilitating existing customers' transition to climate neutrality and/or reduction of GHG emissions                                                | Short term   |
| Positive impact                                    | Making it easier for investors to take environmental criteria into account in their investments by offering sustainable products                              | Short term   |
| Negative impact                                    | Financing / investing in / insuring GHG-intensive sectors and projects                                                                                        | Short term   |
| <b>E1-3: Energy</b>                                |                                                                                                                                                               |              |
| Positive impact                                    | Supporting the energy transition through financing of / investment in / insurance of renewable energies                                                       | Short term   |
| Positive impact                                    | Supporting energy saving measures through financing of / investment in / insurance of energy efficiency projects                                              | Short term   |
| Negative impact                                    | Hindering the shift to green energy through financing of / investment in / insurance of the fossil fuel sector                                                | Short term   |
| <b>E2-1: Pollution</b>                             |                                                                                                                                                               |              |
| Positive impact                                    | Offering insurance/finance/investment for new technologies that reduce pollution                                                                              | Medium term  |
| Negative impact                                    | Financing / investing in / insuring projects/companies in particularly polluting industries and/or with a high volume of harmful emissions                    | Short term   |

| <b>G1-4: Corruption and bribery</b>                                     |                                                                                                                                                                                                                                                  |              |
| Positive impact                                                         | Setting an example and avoiding incidents of corruption by establishing a functioning compliance management system, compliance policies that include rules on corruption, employee training, and an annual risk analysis for preventive purposes | Short term   |
| Positive impact                                                         | Supporting the identification of corruption or fraud, e.g. through an anonymous whistleblowing system and training for employees                                                                                                                 | Short term   |
| Positive impact                                                         | Creating incentives for the avoidance of corruption and bribery when collaborating with business partners                                                                                                                                        | Short term   |
| Positive impact                                                         | Tackling financial criminality                                                                                                                                                                                                                   | Short term   |

Risks and opportunities are assessed using the categories 'financial effect' (what is the extent of the effects?) and 'probability of occurrence' (how likely are the risks/opportunities to occur despite remedial action?). In some cases, dependence on resources and relationships is also taken into account.

The threshold values for determining the materiality of an IRO were based on the EFRAG recommendations in accordance with 'European Sustainability Reporting Guidelines 1, Double materiality conceptual guidelines for standard-setting' (January 2022). The threshold value for impact materiality is greater than or equal to 8 on a scale of 1 to 15. For financial materiality, the threshold value is greater than or equal to 3 on a scale of 1 to 5.

#### Quantifying the impact materiality for the DZ BANK Group

In addition to the qualitative materiality assessment, a quantitative analysis of the credit and investment portfolio was carried out with regard to managing the impacts of the DZ BANK Group's business activities. This was so that the impacts in the DZ BANK Group's lending and investment business can be taken into consideration. The quantitative materiality assessment was based on an 'SDG demonstrator' that was derived from the average values for the DZ BANK portfolio and enables the impact of the DZ BANK Group's individual portfolios on the SDGs to be analyzed. Using the Impact Radar of the United Nations Environment Programme Finance Initiative (UNEP FI), the SDGs were then assigned to specific ESRS topic areas, allowing the portfolio volumes to be assessed from an ESRS perspective.

The assessment includes the data supplied (EU taxonomy and portfolio data for assets under management (AuM)) for the DZ BANK Group.

This data was supplied at NACE code level (Nomenclature statistique des activités économiques dans la Communauté européenne (statistical classification of economic activities in the European Community)), enabling assignment in accordance with DZ BANK's existing SDG classification methodology.

3 different activities and segments in the value chain were examined for the qualitative materiality assessment (banking business, insurance business, asset management), whereas the assessments for the value chains were consolidated for the final overall analysis.

The results of the quantitative materiality assessment confirm the relevant ESRS topic areas identified in the qualitative materiality assessment. No new material topics were identified by the quantitative materiality assessment.

#### Evaluating the risks for the DZ BANK Group

The assessment of financial risks (part of financial materiality) was based on the ESG risk analysis. This ensures consistency with existing risk processes. One or more ESRS sub-topics were assigned to each risk factor on the DZ BANK Group's risk factor longlist in order to incorporate the outcome of the ESG risk analysis (potentially material ESG risk factor category within a material DZ BANK Group risk type) into the ESRS materiality assessment. Where the ESG risk analysis found that a risk factor is relevant and potentially material, the associated ESRS sub-topic was categorized as material in the risk dimension in the ESRS materiality assessment. In the case of potentially material risk factor categories, the underlying risk factors in the longlist and the time horizons in which they are relevant were identified by experts on a qualitative basis.

As the ESRS materiality assessment is carried out in the 'business portfolio' and 'own operations' dimensions, the risk types are assigned as follows:

- Business portfolio dimension:
- Financial risk types
- Reputational risk (considered on a case-by-case basis)
- Own operations dimension:
- Operational risk
- Reputational risk (considered on a case-by-case basis)

Potentially material risks that could impact on the DZ BANK Group financially were formulated for each risk type and ESRS sub-topic where a potentially material ESG risk was identified using the aforementioned system.

Financial and non-financial risks are considered in the approach used to assess which risk types are affected:

- Financial risks
  - Credit risk, equity investment risk, business risk, market risk, technical risk of a home savings and loan company in the Bank sector: assessment using exposure/concentration analysis
  - Market risk in the Insurance sector, actuarial risk: qualitative expert assessment
- Non-financial risks
  - Operational risk: expert assessment based on the DZ BANK Group's existing standard scenarios
  - Reputational risk: expert assessment based on the DZ BANK Group's ESG-related reputational risk scenarios

A groupwide analysis of exposure/concentration is used to assess which financial risks are affected. For each risk factor and risk factor category, the portfolio was divided into segments with potentially higher risk and low risk by means of an exposure value (lending volume, carrying amounts of investment, etc.) based on the risk type. Once the segments of the portfolio with low risk were excluded, the segments with potentially higher risk were validated. To this end, the completeness of the factors examined, the information value of various structuring features, and any mitigating effects were discussed at the risk type level. In the presentation of the results, a risk factor category is considered potentially material if, after taking the aspects mentioned above into account, at least 10 percent of each portfolio exposure shows a potentially higher risk in relation to the country-specific and/or sector-specific evaluation.

In an environmental and climate context, the primary focus is on climate-related physical risks, transition risks, and other environmental risk factors, including biodiversity aspects, in own operations and the business portfolio. These are initially identified and assessed using the method outlined above as part of the ESG risk analysis. The identified material climate-related physical and transition risks, and the relevant time horizons, are described in greater detail in chapter VII.2.1. The DZ BANK Group's stress testing includes the physical and transition risks identified by the ESG risk analysis and uses a variety of scenario analyses to gauge the resilience of the DZ BANK Group's business model. The results of the stress testing, and the underlying climate scenarios, are also presented in chapter VII.2.1.

As part of the qualitative materiality assessment, local stakeholders assessed the DZ BANK Group's locations to identify actual and potential risks related to pollution and biodiversity. Since the DZ BANK Group's sites are located in urban areas, no further site analysis was carried out.

The climate scenarios on which the risk assessment is based, with regard to both climate-related physical risks and climate-related transition risks, can be found in chapter VII.2.1.

### 1.5.2 Results of the materiality assessment (IRO-2)

In its materiality assessment, the DZ BANK Group identified many potential and actual material impacts on people and the environment. These relate to its own operations and to the business portfolio and encompass both positive and negative aspects (inside out). Financial risks and opportunities (outside-in) were also identified. A detailed explanation of the process can be found in chapter VII.1.5.1 above.

The assessment identified climate change mitigation and pollution as material sustainability topics in the group's own operations, as well as various topics concerning its *own workforce (working conditions, equal treatment / non-discrimination, other labor rights)*, *affected communities* and, in the area of corporate governance, the topics of *business practices, corruption and bribery, anti-competitive behavior, lobbying, and suppliers and payment practices*. The following topics were assessed as material in the business portfolio: *climate change adaptation, climate change mitigation, energy, pollution, biodiversity and ecosystems* and, in the social sphere, *workers in the value chain, affected communities, and consumers and end-users*. *Business practices, corruption and bribery, anti-competitive behavior, and lobbying* are also considered material here.

Fig. VII.10 shows the results of the materiality assessment in a materiality matrix along the two axes of double materiality (impact materiality and financial materiality).

FIG. VII.10: RESULTS PRESENTED AS A MATERIALITY MATRIX

Material from the (1) impact perspective (for positive/negative, see Fig. VII.9), (2) risk perspective, (3) opportunity perspective

Impacts, risks, and opportunities can influence the DZ BANK Group’s business model and strategy, while at the same time being induced by strategic decisions and the focus of the business model. These interrelationships are explored in detail in the topic-related sections of this report. The material impacts, risks, and opportunities identified in the materiality assessment are presented in chapters VII.2.1 (Environment), VII.3.1 (Social matters), and VII.4.1 (Governance).

The risks identified in the materiality assessment and the related current financial impacts are covered in the stress tests and in risk management. Should these risks materialize, losses, reduced income, increased costs, and liquidity squeezes could adversely affect the financial performance of the DZ BANK Group or of individual group entities. Detecting such risks at an early stage and taking suitable mitigating action are therefore crucial to ensuring long-term financial stability.

Based on the results of the materiality assessment, and in line with EFRAG guidance on the value chain, the reporting requirements under ESRS were assigned to the topics identified as material. The reporting requirements presented in Fig. VII.11 and the mandatory disclosures under ESRS 2 have been incorporated into this sustainability report.

FIG. VII.11: TOPICS OF THE MATERIALITY ASSESSMENT, INCLUDING ASSIGNMENT OF THE DISCLOSURE REQUIREMENTS

| Dimension          | Standard | Topic                                                                                                                                           | Reporting requirements                                                                                              |
|--------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| Own operations     | E1       | Climate change (climate change mitigation)                                                                                                      | GOV-3, SBM-3, IRO-1, E1-1, E1-2, E1-3, E1-4, E1-6, E1-7, E1-8, E1-9                                                 |

|                    | S1       | Own workforce (working conditions, equal treatment / non-discrimination, other labor rights)                                                    | SBM-2, SBM-3, S1-1, S1-2, S1-3, S1-4, S1-5, S1-6, S1-7, S1-8, S1-9, S1-10, S1-11, S1-12, S1-13, S1-14, S1-15, S1-16 |
|                    | S3       | Affected communities                                                                                                                            | SBM-2, SBM-3, S3-1, S3-2, S3-3, S3-4, S3-5                                                                          |
|                    | G1       | Business conduct (business practices and corporate culture, anti-competitive behavior, political engagement, suppliers, corruption and bribery) | GOV-1, IRO-1, G1-1, G1-2, G1-3, G1-4, G1-5                                                                          |
|                    |          |                                                                                                                                                 |                                                                                                                     |
| Business portfolio | E1       | Climate change (climate change adaptation, climate change mitigation, energy)                                                                   | SBM-3, IRO-1, E1-1, E1-2, E1-3, E1-4, E1-6, E1-9                                                                    |
|                    | E2       | Pollution                                                                                                                                       | IRO-1, E2-1, E2-2, E2-3, E2-6                                                                                       |
|                    | E4       | Biodiversity and ecosystems                                                                                                                     | IRO-1, SBM-3, E4-1, E4-2, E4-3, E4-4, E4-6                                                                          |
|                    | S2       | Workers in the value chain                                                                                                                      | SBM-2, SBM-3, S2-1, S2-2, S2-3, S2-4, S2-5                                                                          |
|                    | S3       | Affected communities                                                                                                                            | SBM-2, SBM-3, S3-1, S3-2, S3-3, S3-4, S3-5                                                                          |
|                    | S4       | Workers in the value chain                                                                                                                      | SBM-2, SBM-3, S4-1, S4-2, S4-3, S4-4, S4-5                                                                          |
|                    | G1       | Business conduct (business practices and corporate culture, anti-competitive behavior, political engagement, corruption and bribery)            | IRO-1, G1-1, G1-3, G1-4                                                                                             |

The results of the materiality assessment and an overview of the material IROs are communicated to DZ BANK's supervisory and management bodies and, through the GSC, to the Boards of Managing Directors of the DZ BANK group entities represented on the GSC.

For the first time, information on the background, process, methodology, and indicative results of the materiality assessment was provided at Board of Managing Directors level in the GSC in October 2023, and at Supervisory Board level during the meeting of the DZ BANK Supervisory Board in March 2024. The results of the materiality assessment were presented and approved in the GSC in February 2025. The results will be presented to the Supervisory Board of DZ BANK in March 2025.

The results of the materiality assessment are validated every year using a questionnaire on material changes compared with the previous year. The basis for validation is the documentation, including the data from the previous year's materiality assessment.

Relevant topics and IROs are reassessed where the questionnaire reveals material changes to a DZ BANK Group entity's starting position or changes of a regulatory nature. The reassessment is carried out on the basis of discussions and coordination in an appropriate format (such as workshops or agreement by circulation) with the relevant internal stakeholder representatives and those responsible for related topics. Financial materiality is validated by analyzing the materiality of ESG risks for material risk types by means of the ESG risk analysis as part of the groupwide ICAAP risk inventory check.

## Overview of EU legislation in the sustainability report

<sup>1</sup> Sequence according to Annex B of ESRs 2.

<sup>2</sup> N/A, as the data point is voluntary or is not taken into account due to a transitional period in the reporting year.

<sup>3</sup> N/A, as the data point only needs to be reported in the event of a negative statement.

## 2 Environment

Given the growing importance of sustainable growth for society as a whole, particularly in an environmental context, the entities in the DZ BANK Group are future-proofing their business. They are actively supporting the European action plan for financing sustainable growth and are helping their customers with their green transition. In this context, climate action is a key aspect in both the business portfolio and in own operations. As a company in the financial sector, the DZ BANK Group plays an important role in the economy in terms of its customers' sustainability transformation. Moreover, considering environmental aspects in its own operations helps the DZ BANK Group to reduce costs thanks to the careful and efficient use of resources. This section shows how environmental matters in own operations and the business portfolio, and the reduction of greenhouse gas emissions, are an integral part of the corporate strategy. It concludes with an insight into the relevant metrics relating to the EU taxonomy, which quantify the progress and challenges in these areas.

### 2.1 Management of material impacts, risks, and opportunities in the environmental sphere (SBM-3)

Climate change and its impact on the economy and society are among the global challenges. Since the financial sector is a key pillar of the economy and directly influences strategic business decisions, it is deemed to play a key role in limiting global warming and aligning the economy with the Paris climate goals. As a financial services provider, the DZ BANK Group believes it has a responsibility to proactively support and shape the transition to a climate-neutral economy.

Through its financial services, the DZ BANK Group shapes the environment by supporting green transformation and incentivizing sustainable practices by offering targeted products and applying exclusion criteria for specific business practices and areas of business, thus directing capital into sustainable investment. Furthermore, the DZ BANK Group has a positive impact on the environment by financing or insuring projects that improve borrowers' resilience regarding the impacts of climate change. Growing customer demand for relevant investment and financing solutions presents financial opportunities for the DZ BANK Group. However, potential negative environmental impacts may arise by providing finance in GHG-intensive sectors or by creating perverse incentives because adaptation measures have not been sufficiently taken into account.

In response to advancing climate change, the DZ BANK Group has identified climate-related and environmental risks as material topics for risk management. It has also put structures in place to identify this kind of risk as early as possible, assess the financial impact, and take action to avoid or mitigate these risks. There are 2 categories of risk for the DZ BANK Group: physical risks and transition risks related to the climate and the environment. Physical risk refers to the financial impact of climate change or the financial impact of environmental conditions. These impacts include more frequent occurrence of extreme weather events, gradual climate change, and progressive environmental degradation (e.g. due to rising temperatures, rising sea levels, loss of biodiversity). Transition risk is the danger of financial losses that may directly or indirectly occur for banks or insurance companies, for example, in connection with the process of switching to a lower-carbon and more environmentally sustainable economy. This risk could, for example, arise due to the rapid adoption of political initiatives to protect the climate and the environment, due to technological progress, or due to changes in market sentiment and preferences. The DZ BANK Group takes a consistently joined-up approach to the framing of its corporate and risk strategies, taking material climate-related and environmental risks into account.

ESG risks and, in particular, climate risks and environmental risks are integrated into the DZ BANK Group's strategic and operational risk management framework. ESG risks are viewed as risk factors for the classic financial and non-financial risks. In this context, sustainability risks that impact on the business activities of the group entities are becoming increasingly important. The DZ BANK Group has integrated an ESG risk analysis into the annual Group risk inventory. In 2024, climate-related physical and transition risks were identified as potentially material overarching factors that harbor short-term, medium-term, and long-term risks with regard to credit risk, actuarial risk, operational risk, reputational risk, business risk, and market risk in the Insurance sector. Furthermore, short-, medium-, and long-term environmental transition risks were rated potentially ma-

terial for operational risk. Physical risks are expected to grow in importance in the long term, which will primarily affect credit risk and actuarial risk. Transition risks are expected to grow in importance in the medium term. This will primarily affect credit risk, market risk in the Insurance sector, and business risk. Material transition risks include risk factors such as the change in energy policy, increases in carbon emission pricing, and climate-related and environmental legal risks.

To test the resilience of its strategy in the face of the latest sustainability-related developments, the DZ BANK Group conducts a variety of analyses whose results build on one another. As mentioned above, the DZ BANK Group has integrated an ESG risk analysis into its annual Group risk inventory. DZ BANK also conducts annual stress tests and business environment analyses. Together, these 3 analyses cover physical risks, transition risks, and systemic risks related to climate and the environment. One of the areas of focus is the analysis of portfolio risks. Risks to the business are included under operational risk and also examined in the ESG risk analysis and the groupwide stress testing. Fundamentally, the risk analysis identifies the potentially material physical risks and transition risks for the DZ BANK Group. Stress testing checks the resilience of the DZ BANK Group's business model in respect of the identified risks. The business environment analyses use the results of the aforementioned analyses and specify the impacts and recommended actions at management unit level.

As part of stress testing, the DZ BANK Group is continually expanding the data and processes with climate scenarios. The DZ BANK Group has implemented an internal climate stress test framework that is part of the existing stress test program. It examines numerous exploratory climate scenario analyses at DZ BANK Group level from a normative and economic perspective for the relevant risk types (credit risk, market risk, operational risk, reputational risk, actuarial risk), time horizons, and climate risks.

Climate risks are factored into the regular adverse stress tests. The framework is integrated into ESG risk management, mainly closely linked to the ESG risk analysis. The following climate scenarios are considered. For flood risk, extreme flood scenarios are examined for 2055 in a world that has warmed by 2.5°C, which corresponds to the Representative Concentration Pathways (RCP) 8.5 scenario. Losses for properties and borrowers are determined on a granular basis, taking the respective locations into account. For forest fires and drought, these types of event are also projected on a granular basis for 2050, taking the location into account and assuming a global warming of 2.3°C. Impacts on the DZ BANK Group's portfolios are determined accordingly. The maps used in all physical climate scenarios are taken from providers such as the Network for Greening the Financial System (NGFS), Aqueduct, and the Joint Research Center. The examination of climate-related transition risks is based on the 'delayed transition' scenario from NGFS.

Overall, exploratory climate scenarios are examined across all climate risks, risk types, and time horizons. Furthermore, in-depth analyses were carried out for climate-related transition risks using a scenario that covers all risk types. The results of the stress tests show that the DZ BANK Group's profitability and capitalization are resilient in the face of climate risks, and that its exposure to such risks, particularly physical climate risks, is low.

The climate stress tests carried out are subject to uncertainty due to the available scenarios and data, and because the methods employed are not widely established across the industry yet. For this reason, the climate stress test report contains in-depth information about the scenarios, assumptions, and simplifications. The plan is to further refine the scenarios, data, and methods in the years ahead.

In addition to risk analyses and stress testing, certain management units in the DZ BANK Group also conduct business environment analyses to determine the impacts of ESG risks, including transition risks, on the DZ BANK Group's business activities and to identify potential opportunities related to material sustainability topics. The business environment analyses identify the material risks for each management unit and any material opportunities that can be pursued in the relevant business environment. The analyses document climate-related and environmental risks and their impacts on the business models of certain management units in the DZ BANK Group. They also ensure that climate-related and environmental risks are taken into account in the

strategic planning process. To the best of their ability, the relevant management units estimate the probability of occurrence of the risks and, if they occur, how soon. Action plans can then be derived from the identified physical and transition risks.

Material climate-related and environmental risks are identified for each sector, the specific chains of events are explained in greater detail, and the impacts on the business model of the relevant management unit are identified. In each sector, the assumptions regarding climate risks and environmental risks are based on the latest regulatory developments (for example a ban on internal combustion engines in the automotive sector) and trends (such as supply bottlenecks caused by the war in Ukraine). Due to the variation in the group entities' business models, physical and transition risks are considered specifically for each group entity's relevant/affected transactions and customers, but are not broken down into a sector overview. The analyses for DZ BANK are conducted in climate-related focus sectors<sup>3</sup> (automotive, energy, fossil fuels, aviation, shipping, cement, and steel). The findings of the business environment analyses give each management unit an indication of how they should react to the specific climate-related and/or environmental risk, and what action they should take, if any. This primarily applies to DZ BANK, as it accounts for the largest share of the business portfolio in the focus sectors examined so far. However, the analysis is not limited to DZ BANK; business environment analyses were conducted by all defined management units in 2024. For the first time, the analyses in 2025 are scheduled to focus on short-, medium-, and long-term options for adapting each business model to climate change.

The materiality assessment (see chapter VII.1.5) conducted by the DZ BANK Group identified material impacts, risks, and opportunities in the 'environment' topic area. These are listed in the figure below, divided into the dimensions 'own operations' and 'business portfolio'. The following subchapters expand on these IROs by describing the DZ BANK Group's environmental targets, actions, and policies.

The entities in the DZ BANK Group each provide the financial resources – in the form of dedicated budgets – for managing and implementing the individual actions related to the environment.

With regard to the DZ BANK Group's own operations, the material IROs deal with climate change mitigation and operational risks in the context of pollution. The relevant information can mainly be found in chapter VII.2.2.

The IROs listed here in the context of the environmental business portfolio are mainly addressed in chapter VII.2.3. An overarching structure was chosen that explores the individual environmental topics in several chapters. Only chapter VII.2.3.1 contains exclusively climate-related goals for the sector targets. More precise details of the assignment of topics to chapters in the report can be found in the figure below.

FIG. VII.13: OVERVIEW OF THE MATERIAL IMPACTS, RISKS, AND OPPORTUNITIES IN THE ENVIRONMENTAL SPHERE

| Topics of the materiality assessment | Standard | Dimension          | IRO type        | Impacts, risks, and opportunities                                                                                                                             | Chapter in the report                                      |
|--------------------------------------|----------|--------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
| Climate change adaptation            | E1       | Business portfolio | Positive Impact | Providing incentives for more sustainable practices/action through financing/insurance and bonuses for / investment in 'sustainable solutions'                | Chapter VII.2.3.1 Climate change in the business portfolio |
|                                      |          |                    | Positive Impact | Financing / insuring / investing in projects that improve the resilience of borrowers / insurees / investee companies regarding the impacts of climate change |                                                            |

<sup>3</sup> In the context of setting climate targets, focus sectors are sectors of industry that need to make a significant global contribution to decarbonization, or sectors that are relevant to the business model of the DZ BANK banking group.

| Topics of the materiality assessment  | Standard | Dimension          | IRO type        | Impacts, risks, and opportunities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Chapter in the report                                                                                                                                          |
|---------------------------------------|----------|--------------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Climate change mitigation (emissions) | E1       | Own operations     | Negative Impact | Creating perverse incentives because adaptation measures have not been taken into account in investment decisions or when agreeing finance/insurance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                |
|                                       |          |                    | Opportunity     | Growing customer demand for financing of / insurance for / investment in adaptation measures (DZ BANK Group positioned as a provider of transformation support)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                |
|                                       |          |                    | Risk            | Credit risk: higher probability of default and/or lower collateral value where affected by the physical consequences of climate change                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                |
|                                       |          | Business portfolio | Risk            | Operational risk: increased legal risk due to climate factors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Chapter VII.2.2.1 Climate change in own operations                                                                                                             |

## 2.2 Environmental matters in own operations

### Brief summary

- Presentation of the planned transition to climate-neutral own operations
- Introduction of the KCU as the central committee of the DZ BANK Group for own operations matters
- Description of the previous climate target pathway in own operations for parts of the DZ BANK Group
- Description of the policies, actions, and relevant decarbonization levers for reducing greenhouse gas emissions in the DZ BANK Group

The DZ BANK Group deals with the integration of environmental matters into its own operations through a wide range of activities. Protecting the environment in the context of its own operations contributes to the careful and efficient use of resources and can help to reduce costs. For the entities in the DZ BANK Group, however, running their own operations in an environmentally responsible manner is also a matter of setting a positive example for employees and customers. Since 2014, the entities in the DZ BANK Group<sup>4</sup> have been working together within the KCU to minimize their environmental footprint. The following chapters explain in greater detail the specific targets, policies, and actions relating to the group's environmental activities at the level of its own operations.

### 2.2.1 Climate change in own operations (E1-1, E1-2, E1-3, E1-4)

#### Transition to a climate-neutral economy (from the perspective of own operations)

Details of the elements required in connection with disclosure requirement E1-1 – transition plan for climate change mitigation, such as decarbonization levers and related actions, are provided below. This chapter also explains in more detail the efforts and activities carried out at the level of own operations in support of the 1.5°C target of the Paris climate agreement. The DZ BANK Group did not define a transition plan of its own for its own operations with regard to its business model in 2024. The transition to climate-neutral own operations will be reviewed and further developed in 2025.

In accordance with its **Position Paper Climate and Environment**, the DZ BANK Group focuses on ongoing energy efficiency actions and on efforts to raise its employees' awareness of sustainability topics in the group's business operations. In its **Position Paper Climate**, DZ BANK also published the principles upon which it will base its actions. The first principle in the position paper, 'Improving our environmental footprint', takes an own operations perspective. It is based on DZ BANK's efforts to continuously reduce its resource consumption in order to minimize the adverse impact of its operational activities on the environment.

#### Climate targets in own operations

There were various changes to the sustainability reporting in relation to 1. scope of consolidation, 2. methodology for determining and processing data, and 3. the Scope 3 categories analyzed:

<sup>4</sup> Members of the KCU since 2014: BSH, DZ BANK, DZ HYP, DZ PRIVATBANK, R+V, Reisebank, TeamBank, UMH, VR Payment, VR Smart Finanz. Members of the KCU since 2024: VR Equitypartner, VR Factoring GmbH.

1. **Changes to the scope of consolidation:** The number of entities included in the DZ BANK Group's greenhouse gas emissions reporting has risen significantly. As a result, VR Equitypartner, VR Factoring GmbH, and VR Payment became additional members of the KCU in connection with the ESRS sustainability reporting. The GHG emissions of the DZ BANK Group are calculated within the KCU. The entire scope of consolidation for the sustainability reporting has also increased, as set out in chapter VII.1.1.
2. **Standard methodology:** The climate data for the newly consolidated entities was collected for the first time in 2024. Since then, the DZ BANK Group has used the tool provided by the Verein für Umweltmanagement und Nachhaltigkeit in Finanzinstituten e.V. (VfU) [Association for Environmental Management and Sustainability in Financial Institutions] to calculate all GHG emissions, whereas individual methods were used in the past. The method used to calculate GHG emissions in the reporting year is described in more detail in chapter VII.2.4.
3. **Expansion and amendment of Scope 3:** The DZ BANK Group reviewed the Scope 3 categories as part of a significance analysis. This resulted in an adjustment (addition of new emissions sources and removal of previous ones). A detailed list of Scope 3 categories, divided into 'significant' and 'not significant', is contained in chapter VII.2.4.

These changes and the resulting limited comparability with the climate target/pathway contained in previous sustainability reports means that the previous climate target, which was set for large parts of the DZ BANK Group<sup>5</sup> prior to the publication of the ESRS requirements, could not be adjusted to the current needs in 2024 in order to meet the requirements for ESRS targets in terms of being measurable, outcome-oriented, and time-bound.

Based on the currently available data with the changes described above, in 2025 DZ BANK Group plans to review and adjust the climate target pathway contained in previous sustainability reports. Particular attention will be paid to ensuring that in the future, the requirements for an ESRS-compliant target – being measurable, outcome-oriented, and time-bound – can be met in the best possible way.

As mentioned above, however, large parts of the DZ BANK Group had set a combined climate target (Scopes 1 to 3) prior to publication of the ESRS requirements. This target, which anticipates **climate-neutral own operations** by no later than **2045**, was communicated in previous sustainability reports with an interim target for 2030. It was based on the Federal Climate Change Act, which came into force on December 12, 2019, enshrining the national climate change mitigation targets for the Federal Republic of Germany in law and supporting the Paris climate agreement in limiting global warming to 1.5°C. The previous goal for large parts of the DZ BANK Group, of achieving climate neutrality by 2045, was the minimum target. The group entities can aim to achieve this emissions reduction more quickly on a voluntary basis. In accordance with previous reports, the volume of greenhouse gas emissions shall be reduced by 65 percent by 2030 compared with the base year of 2009. The plan is to retain the previous, combined overall target (Scopes 1 to 3) of **climate-neutral own operations** by no later than **2045** when adjusting the climate target pathway in 2025.

The operationalization of the climate target pathway and the associated actions is the responsibility of the KCU. One of its tasks in this context is to standardize the data referring to own operations and the resulting carbon footprint. All group entities represented in the KCU record their greenhouse gas emissions in CO<sub>2</sub> equivalents in accordance with the international standard based on the Greenhouse Gas Protocol (GHG Protocol). The emissions are broken down into Scope 1 (direct greenhouse gas emissions), Scope 2 (indirect greenhouse gas emissions), and Scope 3 (greenhouse gas emissions in the value chain).

<sup>5</sup> This does not apply to the group entities VR Equitypartner, VR Factoring GmbH, and VR Payment which were included in the KCU as part of the initial CSRD reporting for the first time in 2024 (they previously only had guest status in the KCU).

The DZ BANK Group identified the following key decarbonization levers aimed at reducing greenhouse gas emissions in its own operations. The levers are underpinned by specific actions (see 'Climate-related actions in own operations').

FIG. VII.14: THE DZ BANK GROUP'S DECARBONIZATION LEVERS

#### Eco-friendly mobility

This lever includes the avoidance / reduction of GHG emissions through the use of innovative mobility concepts and ways of working

#### Eco-friendly facility management

This lever includes the use of renewable energy and smart building controls, and the efficient use of space

The decarbonization levers listed in Fig. VII.14 are applied in order to reduce the greenhouse gas emissions in the DZ BANK Group's own operations. The emissions reductions achieved and expected from the aforementioned decarbonization levers and related actions were not quantified on a disaggregated basis in 2024 due to the high number of actions and the interplay between them. The aim is to record the reductions at action level as part of the revision of the target pathway in 2025.

#### Climate policies in own operations

The policies described below are directly linked to the material topic of climate change mitigation (greenhouse gas emissions), plus the related IROs

The majority of the DZ BANK Group aims to minimize the environmental impact of business travel with its **business travel policy**. For example, business trips in general, and especially domestic flights in Germany, are approved only if they are demonstrably necessary. This contributes to the reduction of greenhouse gas emissions, the promotion of environmentally friendly forms of public transportation, and the optimization of travel processes. For DZ BANK, the business travel policy is available in the ORG portal on the intranet as part of the written set of procedural rules. Governance of the business travel policy is the responsibility of the member of the Board of Managing Directors in charge of the Group Human Resources division. Operationally, the annual review is carried out by Human Resources.

The devolved **company car policies** in the majority of DZ BANK Group entities support the target of reducing greenhouse gas emissions by using modern, clean vehicles. For example, preference is given to electric/hybrid vehicles and the choice of cars and engine specifications is restricted by a CO<sub>2</sub> emissions cap. This cap is continually adjusted in accordance with the environmental rules and regulations applicable to the Group. The process governing company car use at DZ BANK is documented in the written set of procedural rules, with a reference to the company car regulation. Governance of the company car policy is the responsibility of the member of the Board of Managing Directors in charge of the Services & Organisation (SO) division. Operationally, the annual review is carried out by SO.

#### Climate-related actions in own operations

Various actions have been implemented by the individual group entities to reduce the greenhouse gas emissions of the DZ BANK Group's own operations.

The KCU ensures that **achievement of the climate target is monitored** and action plans are put in place. The KCU coordinates the implementation of the climate strategy through the existing yearly process for recording and interpreting data and initiating appropriate action, and reports the results to the GSC. Where the

DZ BANK Group cannot avoid or reduce its carbon emissions, the GSC decides on an ad hoc basis about taking further actions to actively manage them. Actions taken by DZ BANK in 2024 to meet its climate targets included in particular the introduction of an energy management system in line with ISO 50001, an update to the business travel policy, and the electrification of the vehicle fleet. Further details are provided below.

The environmental actions of DZ BANK (in Germany) listed by way of example are also implemented in the same or a similar way in individual DZ BANK group entities. To show which of the main decarbonization levers the actions have been assigned to, the relevant lever is given before each action.

#### Eco-friendly mobility – avoidance/optimization of business trips

The most important actions in connection with the implementation of the business travel policy are (i) avoiding business travel by using virtual alternatives, (ii) using the Deutsche Bahn railway network for long-distance travel (zero-carbon as part of the corporate customer program), (iii) giving preference to public transportation over cars, and (iv) giving preference to hotels certified as sustainable (VDR certified business hotels). These measures are not time-limited and are reviewed and updated on an ongoing basis.

#### Eco-friendly mobility – electrification of the vehicle fleet

The most important actions in connection with the implementation of the company car policy are (i) switching the fleet over to green electric vehicles (EVs), accompanied by a commitment to pay for the electricity used to charge company cars at home, and (ii) setting a CO<sub>2</sub> emission cap for vehicles with internal combustion engines. At the end of 2024, the share of EVs in the fleet was 29.6 percent, i.e. 125 of the 423 vehicles were either all-electric or hybrid. The aim is to have an all-electric fleet by 2030.

#### Eco-friendly mobility – support for alternative transportation

DZ BANK provides a **travel subsidy** to encourage its employees to commute between home and work using public transportation. Since September 2020, DZ BANK has also been offering the DZ Rad scheme, which allows employees to **lease a bike** through salary sacrifice. In total, more than 1,200 bike leasing contracts have been agreed at DZ BANK so far. In 2024, 64.85 percent of employees used public transportation to commute to work.

#### Eco-friendly facilities management – optimization of energy and heat consumption

DZ BANK mainly uses **district heating** to heat its premises. All major sites of DZ BANK in Germany, including Berlin, Düsseldorf, Frankfurt am Main, Hannover, and Stuttgart, use electricity that is generated exclusively from **renewable sources**. **Electricity consumption** at the bank's offices has fallen steadily since 2020. This was partly attributable to an increase in the number of employees working from home since the pandemic, but was also driven by a significant improvement in the efficiency of computing centers thanks to the replacement of outdated hardware and the optimization of technical configurations. In order to reduce the use of electricity and district heating even further in the future, the focus remains on the efficiency of building operations. An **ISO 50001-compliant energy management system** is currently being introduced for this purpose. This should give rise to specific actions for operational energy management.

#### Eco-friendly facilities management – 'New Work' workspace concept

Under DZ BANK's new **workspace concept, New Work**, the desks in the designated New Work areas are not permanently assigned to particular employees; the desk sharing ratio is 7 desks to 10 employees. This makes better use of the available space and thereby optimizes energy consumption. The concept has already been implemented on 37 of the 50 floors in the DZ BANK building at Westend 1 in Frankfurt am Main and will be rolled out to a further 7 floors in 2025. 6 of the total 50 floors are designated special-purpose zones. The 'New Work' concept has also already been introduced at the offices in Düsseldorf, Hannover, and Stuttgart.

Cutting across the decarbonization levers, the following additional actions for reducing the greenhouse gas emissions at the level of own operations were implemented.

#### Environmental and energy management systems

The new German Energy Efficiency Act (EnEfG), which came into force on November 18, 2023 with the goal of raising energy efficiency in Germany, requires companies with annual energy consumption of 7.5 gigawatt hours (GWh) to reduce energy consumption more significantly and to introduce an **energy management system** in accordance with the **ISO 50001** international standard or an **environmental management system based on the Eco-Management and Audit Scheme (EMAS)** by the end of July 18, 2025. EnEfG is aimed at the continual planning, management, monitoring, and improvement of all actions and processes in a company relating to the environment. Further objectives are the systematic and ongoing optimization of energy efficiency, a reduction in energy costs, and the minimization of greenhouse gas emissions. Some entities in the DZ BANK Group already have an externally certified environmental management system. R+V and UMH have implemented an environmental management system in accordance with DIN ISO 14001. TeamBank uses the EMAS environmental management system. BSH plans to implement an environmental management system certified in accordance with EMAS by mid-2025. DZ BANK and R+V intend to introduce an energy management system in accordance with the ISO 50001 standard.

#### Environmental checks in supplier management

Risks may arise in the supply chain that could have an adverse impact on the environment and society as well as jeopardize the supplier relationship. When selecting service providers and suppliers and when purchasing goods and services, the entities in the DZ BANK Group are therefore required to pay careful attention not only to criteria such as quality and price but also to sustainability criteria and the minimization of risk. These include the sustainability requirements that relate to the ESG risks. In accordance with the **sustainability in procurement guidelines**, which are based on the principles of the UN Global Compact and apply to all group entities, the DZ BANK Group's procurement processes incorporate economic, social, and environmental standards. These include minimizing the impact on the environment, and the ongoing improvement of suppliers' environmental protection measures.

The **working group for sustainability in procurement**, which comprises the sustainability coordinators from the procurement departments of the group entities, updates the processes and targets that relate to sustainability in procurement on an ongoing basis. In accordance with new statutory requirements, the working group is developing a **sustainability questionnaire** for capturing sustainability-related information for suppliers. However, the questionnaire will only be used in exceptional cases where a supplier does not undergo an assessment by a sustainability rating platform. **EcoVadis** was selected as the platform for assessing suppliers in 2021 and is now in use at BSH, DZ BANK, DZ HYP, DZ PRIVATBANK, R+V, UMH, and VR Payment. A detailed description of the sustainable supplier management system can be found in chapter VII.4.4.

#### 2.2.2 Pollution in own operations (E2-1, E2-2, E2-3)

No separate targets or policies were defined for potential pollution caused by the DZ BANK Group. This is due to the low materiality. The known adverse impacts are addressed on an ad hoc basis and climate-related policies and actions are implemented to avoid potential legal risks arising in connection with environmental aspects.

## 2.3 Environmental matters in the business portfolio

### Brief summary

- Reporting of targets, policies, and actions relating to climate, pollution, and biodiversity and ecosystems in the business portfolio
- Presentation of the decarbonization targets and ambitions in the lending, asset management, and insurance businesses; in particular presentation of the sector sprints as the basis for the sector targets in the lending business of the DZ BANK banking group
- Description of the DZ BANK Group's exclusion criteria for the lending business, own-account investing, and special funds in relation to climate, pollution, and biodiversity
- List of the DZ BANK sector criteria for integrating sustainability matters into the lending process
- Summary of the voluntary commitments related to the environment

As a group of companies in the financial sector, the DZ BANK Group is committed to playing a key role in the economy's green transformation. It can support its customers' transition to more environmentally friendly practices and processes by allocating funds for uses that promote sustainability. The following chapters explain in greater detail the DZ BANK Group's role in the transition to a climate-neutral economy and the group's specific targets, actions, and policies relating to its environmental activities at the business portfolio level.

### 2.3.1 Climate change in the business portfolio (E1-1, E1-2, E1-3, E1-4)

#### Transition to a climate-neutral economy

For the DZ BANK Group, sustainability is an integral part of the values that it embodies and the activities that it carries out. To this end, it updates the groupwide sustainability strategy on an ongoing basis with the aim of contributing to the transition to a sustainable economy. The DZ BANK Group's **Position Paper Climate and Environment** establishes a framework that addresses the integration of climate-related and environmental aspects into each group entity's operational and portfolio-specific activities. With a particular emphasis on its business portfolio, the DZ BANK Group seeks to align economic and social targets with environmental targets and actively support the transformation of the real economy. This is reflected in the objectives aligned with the 1.5°C target in order to complete the transition to a net zero future. The DZ BANK Group is not excluded from the Paris-aligned EU benchmarks.

For example, the DZ BANK banking group has developed comprehensive sector targets based on **sector sprints** in which internal stakeholders were extensively involved, in particular representatives of the Strategy & Group Development division, the Corporate Banking and Structured Finance front-office divisions, and representatives of the relevant sectoral centers of excellence from the lending business. The sector targets were developed for the corporates, project finance, ships, and real estate asset classes. These climate targets relate to the DZ BANK banking group, i.e. the banking group including own-account investing<sup>6</sup>. Real estate finance at DZ PRIVATBANK is not currently taken into account. The climate target analysis does not include any of the special funds managed in the DZ BANK Group. R+V is not included in the sector target analysis.

The sector targets were agreed by the GSC. The Supervisory Board receives a report each year on the level of target achievement, as part of the business strategy. These targets are based on a structured methodology and are not currently subject to external validation. During these sector sprints, material decarbonization levers were formulated at a qualitative level for the individual sectors and factored into the targets. Overall, the focus was on conducting a comprehensive assessment of the expected transformation for each sector in order to forecast as accurately as possible the extent to which each target will be reached. It is assumed that business partners in the relevant portfolios will gradually and voluntarily implement new technologies that contribute to decarbonization. The DZ BANK banking group itself does not currently plan to use new technologies to achieve the decarbonization targets in the business portfolio.

<sup>6</sup> Own-account investing in funds is excluded from the analysis

The degree of target achievement by the DZ BANK banking group is affected by the actual progress of the transformation in the real economy and any structural shifts in carbon-intensive new business in the business portfolio. The extent of the transition to a zero carbon economy is closely tied to the achievement of decarbonization targets. The progress of the achievement of the sector targets in percentage terms is shown in the section 'Decarbonization targets in the lending business'. Furthermore, red warning thresholds were established for the target pathways, which are intended to ensure that the affected target pathway and the reasons for deviation will be assessed separately where there is a significant deviation from the target. On the basis of this half-yearly monitoring, actions that are appropriate at the time can be initiated in the event of an overshoot. This carefully directed performance monitoring helps to ensure that the climate targets are met. The DZ BANK banking group plans to assist its customers with the upcoming transformation process (reduction) by positioning itself as a provider of transformation support. This is intended to ensure the reduction of potentially locked-in greenhouse gas emissions and also promote climate-friendly new business (avoidance).

The sector sprints revealed that there are generally 2 relevant **decarbonization levers** for each business portfolio. The first decarbonization lever focuses on customers' transformation (passive decarbonization lever) and the second decarbonization lever describes the active adaptation of the business portfolio, such as the targeted expansion of new business with emission-efficient customers (active decarbonization lever). The passive decarbonization levers were analyzed, quantified, and incorporated into the target setting for each individual sector. The process took account of the technological possibilities and actions that can feasibly be implemented in each sector. For example, there are currently only limited short-term technological options in the cement sector, while options to expand the use of renewables already exist in the energy sector. Depending on the sector and starting position, the assumptions regarding the expected development of these two decarbonization levers were taken into account in the target discussions. Customer transformation was identified as a relevant decarbonization lever during all sector sprints, since the business portfolio targets of the DZ BANK banking group can only be achieved if customers actively pursue their own transformation. Active restructuring of the portfolio is essentially only considered as one of several possible actions in the event of a deviation from the target. In the fossil fuels sector, the absolute size of the financed portfolio and thus the level of absolute financed emissions is managed through appropriate rules. Where possible, the DZ BANK banking group also plans to make the most of business opportunities that have a positive influence on the specific business portfolio. As shown in the tables below, the decarbonization actions including the time horizons for these actions are quantified for the 2 forms of decarbonization lever, active and passive.

The sector-specific decarbonization targets are a core element of the overarching sustainability strategy of the DZ BANK banking group across the dimensions of market opportunity, climate-related and environmental risks, and decarbonization. The definition and categorization of the baseline values is important when defining decarbonization targets. Climate alignment is used for this. Climate alignment describes the process of comparing the business portfolio with the reference pathways to achieve the net zero goal. The climate targets were identified on the basis of these comparisons. Climate alignment thus provides the methodological basis for the climate targets. In accordance with the rules for determining climate alignment, sector targets focus on the parts of the value chain that exert the greatest leverage effect in terms of decarbonization and thereby make transition risks, in particular, transparent. By calculating the actual value and comparing this with a 1.5°C reference pathway, which already contains significant assumptions, it becomes clear how climate-efficient the bank's customers are and how extensive the upcoming transformation is. If the actual value is poor, it follows that the portfolio needs to be transformed more quickly than the global average in order to remain on the 1.5°C pathway in 2050. Half-yearly publication as part of the regulatory risk reporting (Pillar III) ensures transparency with regard to which transition risks are increasing and which are falling, allowing action to be taken in the event of a target being missed. The greenhouse gas inventory on which the decarbonization targets and climate alignment are based and the categorization of the emissions scopes are shown in the greenhouse gas emissions of the entities of the DZ BANK banking group in Fig. VII.19 in chapter VII.2.4.

DZ BANK AG also sets out the decarbonization levers it is using to shape the transition to a climate-neutral economy in its **Position Paper Climate**, which is publicly accessible on the DZ BANK website. Within the business portfolio, these include:

1. **Expanding the low-carbon business portfolio:** DZ BANK supports its customers with their funding projects on the path to a low-carbon economy. It pursues this objective through its product offering.
2. **Supporting the transformation of carbon-intensive industries and activities:** DZ BANK plans to permanently reduce the carbon intensity of its credit portfolio. It is doing so by assessing business activities against internal sustainability standards (e.g. exclusion criteria and sector criteria) and advising customers on their transformation.
3. **Commitment to promoting sustainability:** DZ BANK encourages sustainability discourse in society and business, and supports the transition to a low-carbon economy. To this end, it is active in relevant networks, raises awareness of the topic among its employees, and provides transparency through its reporting.

In its published Position Paper Climate and Environment, the DZ BANK Group reiterates its determination to play its part in limiting climate change and to strategically align itself with this objective.

Outside the banking group, R+V believes that, as an institutional investor and an insurer, it has a responsibility to society and the environment. R+V's fundamental position with regard to material climate change-related sustainability matters, and the basis for the transition to a climate-neutral economy, is set out in its overarching sustainability strategy. This was agreed on June 13, 2022 by the Board of Managing Directors of R+V Versicherung AG for all R+V companies in Germany, with the exception of carexpert, Sprint, and Gesellschaft für Wohnungs- und Gewerbebau Baden-Württemberg AG (GWG). The Sustainability department in Corporate Development is responsible for coordinating implementation of the strategy. The actions and activities required to implement the strategic areas of action in the sustainability strategy are documented in the sustainability program.

The targets and actions for investing activities developed in connection with R+V's sustainability strategy are explained in detail in chapters VII.2.3.1 'Decarbonization targets in the insurance business' and VII.2.3.1 'Climate-related actions in the insurance business'. R+V intends to achieve climate neutrality in the underwriting business by 2050. As of 2024, the methods for recording the greenhouse gas emissions produced by insurance customers and the possible decarbonization levers for these greenhouse gas emissions have not yet been finalized. The declaration of intent to achieve climate neutrality in the insurance business does not currently constitute a measurable target. The climate targets previously communicated in the insurance business should also be regarded as declarations of intent. Work on defining specific targets or interim targets will begin in 2025. To facilitate the achievement of these targets, efforts will be made to consistently implement sustainability aspects in the underwriting business.

#### Decarbonization targets in the lending business

In recent years, the DZ BANK Group has set itself a range of climate targets, from sector-specific and cross-sector decarbonization targets to increasing the proportion of the business portfolio volume accounted for by renewable energies. These targets are directly linked to the material topics of climate change adaptation, climate change mitigation, and energy, plus the related IROs.

In 2022, the DZ BANK banking group<sup>7</sup> began to align its business portfolios with the general parameters aimed at achieving the Paris climate agreement. To this end, the DZ BANK banking group undertakes to align its portfolios in particularly carbon-intensive sectors with the 1.5°C target. The sector-specific decarbonization pathways are running on a medium to long-term convergence with the 1.5°C reference pathway. Conformity with the 1.5°C target pathway should be achieved in 2050 for selected sectors. The entities in the DZ BANK banking group formally declared this ambition as part of voluntary commitments such as the Net Zero Banking

<sup>7</sup> The GHG emissions reduction targets listed in the following chapters ('Fossil fuels' to 'Chemicals') are decarbonization targets for focus sectors in the lending business. They apply exclusively to the business portfolios in the DZ BANK banking group. Outside the DZ BANK banking group, R+V has set its own targets for its investment activities. These are set out in the chapter 'Decarbonization targets in the insurance business'.

Alliance Germany and the collective commitment to climate action of the German financial sector. A summary of the voluntary commitments given by the DZ BANK Group is shown in Fig. VII.18 at the end of this chapter.

When the sector targets were set, not every part of the business portfolio of the DZ BANK Group was included. The focus was on the DZ BANK banking group, i.e. the banking group including own-account investing<sup>8</sup>. Real estate finance at DZ PRIVATBANK is not currently taken into account. The climate target analysis does not include any of the special funds managed in the DZ BANK Group. R+V is not included in the sector target analysis. The sector targets relate to the business portfolio and thus fall under Scope 3 greenhouse gas emissions (category 15).

The physical emissions intensities in the sectors of particular relevance to decarbonization, also known as focus sectors, are measured, documented, and translated into targets. Targets and decarbonization pathways were defined for the following sectors, predominantly during **sector sprints**:

- Fossil fuel
- Energy
- Automotive
- Steel
- Cement
- Aviation
- Shipping
- Real estate (private and commercial)
- Chemicals

The underlying methodology for calculation of the benchmark figures and actual figures for the physical emissions intensities in these sectors is based on the rules in the Paris Agreement Capital Transition Assessment (PACTA). The main principle of the PACTA methodology is the measurement of sector-specific physical emissions intensities, which are then compared with the Net Zero 2050 scenarios published by the International Energy Agency (IEA). Physical emissions intensity reflects the particular nature of the individual sector and facilitates comparisons between companies in that sector. Climate alignment focuses on the parts of the value chain that exert the greatest leverage effect in terms of decarbonization. To comply with the PACTA methodology, the analysis looks at the NACE codes that cover all of the counterparties included in DZ BANK banking group's portfolio that are relevant to climate alignment. The physical emissions intensity for the portfolio is calculated based on the total sample and the carrying amounts for the aggregated credit risk data. To ensure that the results for its portfolio are consistent, DZ BANK calculates physical emissions intensity on a bottom-up basis at asset level for each customer in the selected focus sectors. Granular production data and emissions factors that are primarily based on external data sources are used for each sector.

During the target discussion (sector sprints) for the focus sectors, scenarios were calculated that represent the expected development of the business portfolio and its decarbonization. The specific comparison scenarios are taken from the updated roadmap of World Energy Outlook 2023 for net-zero emissions by 2050.

The sectors undergo a detailed analysis, taking account of regulatory conditions, the sector's technical possibilities and limitations, and innovation. The targets were set on the basis of these scenarios and assumptions. The sector targets for the DZ BANK banking group are aimed at aligning the lending and investment portfolios with the Net Zero Emissions 2050 scenario (NZE) of the International Energy Agency in the long term.

Most of the targets are presented as intensity values, as is common in the market. This makes it easier to capture the specifics of individual sectors and use efficiency-related targets to support companies with their sustainability transformation. Furthermore, intensity targets allow banks to pursue environmental goals that are in line with their ambition to grow.

<sup>8</sup> Own-account investing in funds is excluded from the analysis.

Only the fossil fuel sector has been given an absolute target for the reduction of greenhouse gas emissions as it is generally not possible to measure transformation within this sector. Once their transformation is complete, some companies would be categorized in one or more other sectors, for example the energy sector, and then be covered by the respective sector targets.

DZ BANK publishes its climate targets and the related target achievement on the basis of the currently available data and currently valid methodology. It is expected that methodological standards will continue to develop and data quality will improve over time, so DZ BANK's analysis and setting of climate targets will remain an ongoing process and results may be updated.

The DZ BANK banking group has developed half-yearly monitoring for the targets so that it has the option to take more far-reaching action if the climate targets set are not achieved. Before each business transaction in the fossil fuel sector, the feasibility of carrying out the business is also examined, taking account of the climate target pathway. The aim in doing so is to continuously develop the business portfolio along the climate target pathway.

The individual sectors and decarbonization levers are described in greater detail below.

#### Fossil fuel

The fossil fuel sector plays a central role in the global energy economy but also presents considerable challenges with regard to climate action and sustainability. The burning of fossil fuels such as coal, oil, and gas is responsible for a significant proportion of global greenhouse gas emissions. The transition to less carbon-intensive fuels and the introduction of technologies that reduce emissions are important steps. Reducing greenhouse gas emissions from fossil fuels is essential to achieving the global 1.5°C target and minimizing the negative impact on health and the environment.

The DZ BANK banking group's decarbonization target pathway is broadly aligned with the International Energy Agency's Net Zero Emissions (IEA NZE) reference pathway, which is recognized internationally and by the science community and is based on an absolute metric (financed emissions – megatonnes CO<sub>2</sub>eq). The target is limited to upstream oil and gas activities<sup>9</sup> (extraction and production; Scope 3 greenhouse gas emissions), not to geographical boundaries. It covers the original target period from 2024 to 2050 (26 years) with defined interim targets for 2027, 2030, and 2040.

|                                                                                             | Benchmark as at<br>June 30,<br>2024 | Actual<br>value as<br>at Dec. 31,<br>2024 | 2027<br>target | 2030<br>target | 2040<br>target | 2050<br>target |

| Reduction target (mtCO <sub>2</sub> eq)                                                     |                                     |                                           | 0.11           | 0.25           | 1.14           | 1.58           |
| Passive lever: Transformation of the sector                                                 |                                     |                                           | 0.11           | 0.18           | 0.59           | 0.79           |
| Active lever: Tapering of the portfolio and financing of less emissions-intensive customers |                                     |                                           | -              | 0.06           | 0.55           | 0.79           |

#### Energy

The greenhouse gas emissions of the energy sector, particularly power generation, account for around 75.7 percent of global greenhouse gas emissions.<sup>10</sup> Reducing these greenhouse gas emissions requires both industry and consumers and end-users to transition to low-carbon and renewable energy sources as soon as possible. Green power generation will support the decarbonization of other sectors (such as automotive and steel).

<sup>9</sup> Further information can be found under the exclusion criterion 'thermal coal', for example, which is explained later in this chapter.

<sup>10</sup> World Resources Institute (2021): <https://www.wri.org/insights/4-charts-explain-greenhouse-gas-emissions-countries-and-sectors>

Suppliers face the further challenge of guaranteeing energy security and providing energy sources such as gas as a bridging technology.

The main lever for decarbonizing the energy sector is the switch from generating electricity from fossil energy sources (coal, oil, gas) to generating it from renewable sources.

The DZ BANK banking group's decarbonization target pathway is aligned with the IEA NZE reference pathway, which is recognized internationally and by the science community and is based on a relative metric (physical emissions intensity – kg CO<sub>2</sub>eq / megawatt hour). The target is limited to power generation (Scope 1 greenhouse gas emissions from the companies' perspective, which equate to Scope 3 greenhouse gas emissions from the DZ BANK banking group's perspective), not to geographical boundaries. It covers the original target period from 2022 to 2050 (28 years) with defined interim targets for 2025, 2030, and 2040.

|                                                                                             | Bench-<br>mark as at<br>December<br>31, 2022 | Actual<br>value as<br>at Dec. 31,<br>2024 | 2025<br>target | 2030<br>target | 2040<br>target | 2050<br>target |

#### Automotive

The automotive sector accounts for around 12.1 percent of global greenhouse gas emissions.<sup>11</sup> The focus here is primarily on vehicle manufacturers. New drive technologies, particularly hybrid and all-electric vehicles, will be key to accelerating decarbonization within the sector. Other drive types may also become a factor in the medium to long term.

The DZ BANK banking group's decarbonization target pathway is aligned with the IEA NZE reference pathway, which is recognized internationally and by the science community and is based on a relative metric (physical emissions intensity – kgCO<sub>2</sub>eq / km). The target is limited to vehicle manufacturers (Scope 3 greenhouse gas emissions from the vehicle manufacturers' perspective and the DZ BANK banking group's perspective), not to geographical boundaries. It covers the original target period from 2022 to 2050 (28 years) with defined interim targets for 2025, 2030, and 2040.

|                                                                                             | Bench-<br>mark as at<br>December<br>31, 2022 | Actual<br>value as<br>at Dec. 31,<br>2024 | 2025<br>target | 2030<br>target | 2040<br>target | 2050<br>target |

<sup>11</sup> World Resources Institute (2021): <https://www.wri.org/insights/4-charts-explain-greenhouse-gas-emissions-countries-and-sectors>

## Steel

The steel sector accounts for around 6.1 percent of global greenhouse gas emissions.<sup>12</sup> Significant reductions in carbon emissions cannot be achieved through short-term process optimization alone; they require long-term, cost-intensive structural changes.

The main lever for decarbonizing the steel sector is to switch production from conventional blast furnaces to electric arc furnaces for extracting steel from iron ore.

The DZ BANK banking group's decarbonization target pathway is aligned with the IEA NZE reference pathway, which is recognized internationally and by the science community and is based on a relative metric (physical emissions intensity – kgCO<sub>2</sub>eq / kilogram of steel). The target is limited to steel producers (Scope 1 and Scope 2 greenhouse gas emissions from the steel producers' perspective, which equate to Scope 3 greenhouse gas emissions from the DZ BANK banking group's perspective), not to geographical boundaries. It covers the original target period from 2022 to 2050 (28 years) with defined interim targets for 2025, 2030, and 2040.

|                                                                                             | Benchmark as at<br>December<br>31, 2022 | Actual<br>value as<br>at Dec. 31,<br>2024 | 2025<br>target | 2030<br>target | 2040<br>target | 2050<br>target |

## Cement

The cement sector currently accounts for around 3.4 percent of annual global greenhouse gas emissions.<sup>13</sup> The bulk of cement-related greenhouse gas emissions along the value chain are generated in cement production through calcination, an essential part of the manufacturing process. New solutions are being researched to decarbonize cement production, such as reducing the clinker factor or the greenhouse gas emissions inherent to heat generation in the process, and the use of carbon capture, utilization, and storage (CCUS) solutions in the long term.

The DZ BANK banking group's decarbonization target pathway is aligned with the IEA NZE reference pathway, which is recognized internationally and by the science community and is based on a relative metric for cement production (physical emissions intensity – kgCO<sub>2</sub>eq / kilogram of cement). The target is limited to cement producers (Scope 1 and Scope 2 greenhouse gas emissions from the customers' perspective, which equate to Scope 3 greenhouse gas emissions from the DZ BANK banking group's perspective), not to geographical boundaries. It covers the original target period from 2022 to 2050 (28 years) with defined interim targets for 2025, 2030, and 2040.

#### Aviation

Direct greenhouse gas emissions from aviation account for around 3.1 percent of global greenhouse gas emissions.<sup>14</sup> The majority are produced in flight operations through the combustion of kerosene jet fuel. In the short term, technical and operational efficiency improvements can lower these greenhouse gas emissions. These include the use of more efficient fleets, operations scheduling, and air traffic management. In the medium term, sustainable aviation fuels (SAFs), which are produced without the use of fossil fuels, will be available.

The DZ BANK banking group's decarbonization target pathway is aligned with the IEA NZE reference pathway, which is recognized internationally and by the science community and is based on a relative metric (physical emissions intensity – kgCO<sub>2</sub>eq / pkm<sup>15</sup>). The target is limited to passenger airplanes (Scope 1 greenhouse gas emissions from the customers' perspective, which equate to Scope 3 greenhouse gas emissions from the DZ BANK banking group's perspective), not to geographical boundaries. It covers the original target period from 2022 to 2050 (28 years) with defined interim targets for 2025, 2030, and 2040.

|                                                                                             | Bench-<br>mark as at<br>December<br>31, 2022 | Actual<br>value as<br>at Dec. 31,<br>2024 | 2025<br>target | 2030<br>target | 2040<br>target | 2050<br>target |

#### Shipping

Direct greenhouse gas emissions from the shipping sector account for around 1.7 percent of global greenhouse gas emissions.<sup>16</sup> Improvements to operational efficiency, the optimization of technology, and the use of alternative fuels can all help to decarbonize the sector.

The main approach to reducing emissions in the shipping sector is to optimize the vessels, for example by reducing the vessels' resistance in the water and improving propulsion systems, and to switch to less carbon-intensive drive technologies.

In the shipping sector, the DZ BANK banking group has a very diverse business portfolio featuring many different types of vessel. The Poseidon Principles (PP) of the International Maritime Organization (IMO) provide the basis for the climate alignment of the shipping sector, with specific reference pathways applicable depending

<sup>14</sup> Bundesverband der Deutschen Luftverkehrswirtschaft (BDL) [German Aviation Association] (2023): <https://www.bdl.aero/en/topics/climate-environmental-protection/climateprotection/>.

<sup>15</sup> pkm = passenger kilometer.

<sup>16</sup> World Resources Institute (2021): <https://www.wri.org/insights/4-charts-explain-greenhouse-gas-emissions-countries-and-sectors>

on the type and size of vessel. This results in an aggregated overall pathway comprising the individual pathways for each vessel type. The focus here is on directly financing individual vessels (assets), not on financing the shipping company for a specific purpose. The reference pathway is based on a relative metric (physical emissions intensity – gCO<sub>2</sub>eq / dwt nm or gt nm (deadweight tonnage nautical miles or gross tonnage nautical miles). The target is limited to operation of the ships (Scope 1 greenhouse gas emissions from the shipping companies' perspective, which equate to Scope 3 greenhouse gas emissions from the DZ BANK banking group's perspective), not to geographical boundaries. It covers the original target period from 2023 to 2050 (27 years) with defined interim targets for 2025, 2030, and 2040.

The vessels' physical emissions intensities and reference pathways are aggregated to facilitate presentation at business portfolio-level. It should be noted that the business portfolio in this sector is small, and physical emissions intensity is therefore sensitive to the conclusion of individual transactions that alter the composition of the business portfolio. The reference pathway is recalculated and aggregated for each reporting date on the basis of the actual value.

#### Real estate

Buildings are the single largest energy consumer in the EU, accounting for 6.6 percent of global energy-related carbon emissions.<sup>17</sup> The bulk of this is generated by residential buildings. The sector therefore has huge potential for greater energy efficiency, while presenting major challenges for market players in both private and commercial real estate.

Legislation such as the EU Energy Performance of Buildings Directive (EPBD), the German Buildings Energy Act (GEG), and the EU Taxonomy Regulation has been designed to encourage decarbonization, but the targets set may need to be adjusted in response to rapid changes.

In the medium term, decarbonization is expected to primarily be achieved by improving energy efficiency in buildings and replacing oil and gas heating systems. The technologies required for decarbonization already exist and are largely ready to be used. The main levers for decarbonizing the real estate sector are transitioning from fossil energy sources (coal, oil, and gas) to renewables for heat and electricity generation, adapting real estate to enable the effective use of these renewable energy sources, and improving energy efficiency in buildings, particularly through renovation measures.

The DZ BANK banking group's decarbonization target pathway is aligned with the Carbon Risk Real Estate Monitor (CRREM) reference pathway, which is recognized internationally and by the science community and is based on a relative metric (physical emissions intensity – kgCO<sub>2</sub>eq / m<sup>2</sup>a). This reference pathway makes assumptions for previous years on transformation that has not yet been completed. The target is limited to materiality in private and commercial real estate (Scope 1 and Scope 2 greenhouse gas emissions from the customers' perspective, which equate to Scope 3 greenhouse gas emissions from the DZ BANK banking group's

<sup>17</sup> World Resources Institute (2021): <https://www.wri.org/insights/4-charts-explain-greenhouse-gas-emissions-countries-and-sectors>

perspective), not to geographical boundaries. It covers the original target period from 2023 to 2050 (27 years) with defined interim targets for 2026, 2030, and 2040.

#### Chemicals

The chemicals sector is an integral part of numerous industries. As a sector that will be difficult to decarbonize, it faces considerable challenges with regard to climate change mitigation. The chemicals industry is a major consumer of energy and accounts for around 2.6 percent of global greenhouse gas emissions.<sup>18</sup> Key decarbonization levers include optimizing the efficiency of process technologies and chemical processes, using renewable energy sources such as wind and solar power, replacing fossil fuels with, for example, biomass in heat and steam generation, increasing the rate of recycling, and using power-to-X technologies to convert excess renewable energy into chemical products. These steps are essential to increasing sustainability in the chemicals sector and to achieving global climate targets.

The DZ BANK banking group's decarbonization target pathway is broadly aligned with the IEA NZE reference pathway, which is recognized internationally and by the science community and is based on a relative revenue metric (kgCO<sub>2</sub> / €), which measures the customer's carbon emissions per euro of revenue. In line with the IEA reference pathway, the target is limited to the entire midstream segment and to pharmaceutical companies (Scope 1 greenhouse gas emissions from the companies' perspective, which equate to Scope 3 greenhouse gas emissions from the DZ BANK banking group's perspective), not to geographical boundaries. It initially covers the original target period from 2024 to 2030 (6 years) with a defined interim target for 2027.

#### Decarbonization targets in asset management

DZ PRIVATBANK<sup>19</sup> aims to contribute to the fight against climate change and help to finance the sustainable transformation of the economy. This involves mitigating the financially material risks of climate change in its asset management customers' portfolios and, at the same time, systematically harnessing the opportunities presented by technological progress.

As part of its climate strategy, UMH aims to cut financed greenhouse gas emissions in the portfolio of **securities** under management to **net zero** before 2050. This long-term aim, which is based on the ambition of limiting global warming to no more than 1.5°C above pre-industrial levels, is to be reached using binding interim targets. The first step is to reduce the financed greenhouse gas emissions in the securities portfolio by at least 50 percent by 2030, compared with the 2019 base year.

In the real estate business, UMH has adopted a Manage to Green strategy with which it is aiming to make its global **real estate portfolio climate neutral by 2050**.<sup>20</sup> It has defined 2 interim steps to help achieve this: Relative to the 2022 base year, the annual carbon emissions per square meter are to be reduced by 40 percent by 2030, and the energy consumption per square meter is to be reduced by 35 percent by 2035.

#### Decarbonization targets in the insurance business

In 2021, R+V set itself a binding climate target for its investments. This includes a reduction in greenhouse gas emissions (measured in CO<sub>2</sub> equivalents) with the aim of reaching **climate neutrality in 2050**. R+V is guided in this respect by the agreement to limit average global warming to a maximum of 1.5°C above pre-industrial levels. The objective applies both separately to the individual companies R+V Lebensversicherung AG and Condor Lebensversicherungs-AG, and in the form of a group target to the R+V insurance companies in Germany. It does not apply to carexpert, Sprint, GWG, or Assimoco S.p.A. The climate targets for R+V's investment activities were agreed in 2021 on R+V's own initiative, and initially applied exclusively to the asset classes 'listed equities of large European companies' and 'listed bonds of large international companies' (not including finance companies). These asset classes are referred to below simply as 'equities' and 'bonds'. The base year for the asset classes and bonds is 2019. A baseline measurement for 2019 produced a figure of 161 tCO<sub>2</sub>eq / € million for equities and corporate bonds. R+V's choice of 2019 as the base year (prior to the global coronavirus pandemic with its temporary effect on the target metric) is in line with the targets of the Net-Zero Asset Owner Alliance (NZAOA).

- 2025: -20 percent carbon footprint for equities and bonds (these two asset classes account for a material proportion of the known carbon emissions linked to investments)
- 2030: -40 percent carbon footprint for equities and bonds

In April 2023, R+V joined the Net-Zero Asset Owner Alliance (NZAOA) in order to reinforce its own climate target. Under the NZAOA, which was set up by the United Nations Environment Programme Finance Initiative (UNEP FI) and the Principles for Responsible Investment (PRI), a number of companies worldwide – mainly major pension providers and insurers – have committed to making their investment portfolios climate-neutral by 2050. The NZAOA members set themselves science-based interim targets and undertake to report regularly on progress. A key action is aimed at encouraging an economically feasible transition that is compatible with the Paris climate goals through dialogue with the companies in which members invest. In April 2024, R+V published a selection of optional targets based on the third edition of the NZAOA's target-setting protocol. As there is not yet enough data and uniform measurement methods are not yet available for all investments, R+V aims to gradually integrate further relevant asset classes into its climate target over the next few years. The climate targets for investment were defined in agreement with the Board of Managing Directors of R+V Versicherung AG and as such make an active contribution toward implementing R+V's overarching sustainability strategy. There are currently no plans to introduce new technologies to achieve the climate targets.

<sup>19</sup> In the paragraphs below, 'DZ PRIVATBANK' is used to refer to both DZ PRIVATBANK S.A. and DZ PRIVATBANK Schweiz AG.

<sup>20</sup> This does not apply to UMH's mandates for real estate service investment management companies or to the Zentral Boden Immobilien Group (ZBI).

The targets for equities and bonds relate to the Scope 1 and Scope 2 greenhouse gas emissions of the entities affected. The location-based method is used to calculate the Scope 2 greenhouse gas emissions included in the target. In comparison with the financed emissions for the investment as a whole, which are calculated according to the PCAF standard, the PCAF standard is applied only approximately for the metric that provides the basis for the target. In particular, the company intensities for both equities and bonds are always weighted with the relevant fair values rather than, in the case of bonds, the par values. The target for equities and bonds applies to 2.9 percent of the Scope 3 greenhouse gas emissions in the greenhouse gas inventory and thus represents that share of total greenhouse gas emissions. The target also includes around one-third of the financed emissions excluding the Scope 3 greenhouse gas emissions. This figure should be regarded as highly approximate, particularly given the methodological differences in the underlying metrics and the different measurement dates. By June 30, 2024, the carbon footprint for equities and bonds had been reduced by 30.3 percent, relative to the 2019 base year. Progress is monitored by a committee made up of employees from the financial controlling and securities portfolio management teams.

#### Climate policies in the lending business: Exclusion criteria related to the environment

The DZ BANK Group has adopted strict standards for its business activities in order to meet its corporate social responsibilities toward people and the environment, and comply with the principles of sustainable corporate governance. The **exclusion criteria** for specific business practices and sectors are an integral element of its commitment to sustainability. They are designed to ensure that the minimum requirements relating to ESG topics are met and to prevent increased risk of damage to the DZ BANK Group's reputation. The groupwide exclusion criteria are reviewed and refined annually to adapt them to changing societal norms and new developments in science and politics. This policy is directly linked to the material topics of climate change adaptation, climate change mitigation, energy, pollution, and biodiversity and ecosystems, plus the related IROs.

As a financial services provider, the DZ BANK Group brings different business models together in one group. Depending on the nature of the business, the group entities will have their own ESG priorities. The exclusion criteria shown below are based on one standard that applies across the group. Further criteria may exist or be set for each group entity in relation to its business model.

The DZ BANK Group's exclusion criteria for the **lending business, own-account investing, and special funds** are described below.

General exclusion criteria apply to lending, own-account investments, and debt capital market business<sup>21</sup> in the DZ BANK Group. Every exposure – including corporate, project, export, foreign trade, acquisition, real estate, leasing, and object finance – must be examined in terms of sustainability matters. These general exclusion criteria are enshrined in the group credit standard of the DZ BANK Group, which provides rules on the consideration of risks associated with ESG factors. This contributes to achieving the overarching goal of integrating sustainability matters into the DZ BANK Group's internal processes. The exclusion criteria directly relating to GHGs and the climate also make it easier to achieve climate targets (sector targets). Depending on the business model of the group entity concerned, the scope of application or justified exceptions (for example exceptions for cooperative banks, for DZ BANK group companies, where there is credible evidence of the borrower's willingness to transform, or for higher-level decisions in exceptional cases) can be defined.

The exclusion criteria in the list below set the standard for the DZ BANK Group. The exclusions specific to the environment are indicated by 'E'. The exclusions marked with 'S' are fundamental principles for dealing with social matters (see chapter VII.3.3).

<sup>21</sup> DCM = debt capital market: support for customers in structuring and placing bonds on the capital markets.

FIG. VII.15: EXCLUSION CRITERIA FOR THE DZ BANK GROUP'S LENDING AND OWN-ACCOUNT INVESTING ACTIVITIES

#### Exclusion criteria

|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Thermal coal<br>'E'                           | <p>We do not fund coal-fired power plants – whether new or existing.</p> <p>We do not fund upstream activities in the thermal coal value chain – especially extraction and trade, and directly associated activities.</p> <p>We do not fund companies that operate coal-fired power plants, extract thermal coal, trade in thermal coal, or have a direct association with it, unless</p> <ul style="list-style-type: none"> <li>- the possibility of the funding being used in connection with these activities can be ruled out; or</li> <li>- there is a clear willingness to transform; or</li> <li>- thermal coal accounts for less than 5 percent of the business (for operators of coal-fired power plants, this is the proportion of power generation; for others, the share of revenue).</li> </ul> |
| Oil/gas extraction<br>'E'                     | <p>We do not fund oil extraction activities (upstream) and oil/gas extraction activities that involve fracking, oil shale / oil sand, Arctic drilling, or deep sea mining.</p> <p>Additional information in connection with climate target management: We do not enter into new business (other than refinancing) that increases the lending volume with companies involved in oil and gas extraction (upstream), unless evidence is provided that the funds are to be used for a purpose other than oil/gas extraction.</p>                                                                                                                                                                                                                                                                                 |
| Nuclear energy<br>'E'                         | We do not fund activities connected with the construction, operation, or maintenance of nuclear power stations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Trading of animals and plants<br>'E'          | We do not fund activities involving the trading of endangered animal or plant species in accordance with the CITES (Convention on International Trade in Endangered Species) list.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Significant threats to the environment<br>'E' | We do not fund companies or projects that pose significant environmental risks, particularly uranium extraction, mining activities involving the mountain-top removal method, asbestos extraction, projects/assets or activities that pose a high risk of nuclear, biological, or chemical contamination (excluding biogas facilities), and hazardous goods with insufficient measures to minimize risk.                                                                                                                                                                                                                                                                                                                                                                                                     |
| Controversial weapons<br>'S'                  | <p>We do not fund the production or trade of controversial weapons, i.e. weapons that have indiscriminate effects, are excessively injurious, have a devastating impact on the civilian population, or have been internationally outlawed, including – but not limited to – nuclear, biological, and chemical weapons, land mines, anti-personnel mines, cluster bombs, autonomous weapons, and depleted uranium munitions.</p> <p>We do not fund companies involved in the development, production, maintenance, operation, or trade of controversial weapons or their core components if it cannot be ruled out that the funding may be used for these activities.</p>                                                                                                                                     |
| Conventional weapons<br>'S'                   | <p>We do not fund companies that are linked to the development, production, maintenance, or operation of conventional weapons or their material parts, pursuant to the definition in the German Weapons Act (WaffG) and that have their registered office outside NATO or EEA/EFTA countries, unless there is proof that the weapons will be used exclusively by NATO, EEA, or EFTA countries.</p> <p>We do not fund transactions involving the supply of weapons in/to countries outside NATO, the EEA, or EFTA or areas of conflict, unless a government export authorization has been issued.</p>                                                                                                                                                                                                         |
| Human rights and labor rights<br>'S'          | We do not fund companies that demonstrably contravene internationally recognized standards of human rights and labor rights. Internationally recognized standards are the UN Global Compact, the UN Guiding Principles on Business and Human Rights, and the fundamental conventions of the International Labour Organization (ILO).                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Pornography<br>'S'                            | We do not fund companies from the pornography industry or similar sectors (sex industry)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Controversial gambling<br>'S'                 | We do not fund companies that are involved in controversial forms of gambling. Companies involved in controversial forms of gambling are defined as companies whose original business purpose is gambling, except where operated or supervised by public-sector entities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Trade involving conflict materials<br>'S'     | We do not fund trade activities involving materials extracted in conflict regions by a conflict party in a way that breaches human rights, and which may be used to finance the conflict.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Deforestation<br>'E'                          | We do not fund activities with a direct link to illegal deforestation, slash-and-burn, and/or the conversion of tropical forests, primary forests, and protected areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

Monitoring compliance with the exclusion criteria and sector criteria forms part of the management of ESG risks in the loan origination and monitoring process. At DZ BANK, loan applications are systematically assessed

on a qualitative basis against relevant sustainability criteria as part of the credit check process. The ESG checklist systematically documents the checking of the exclusion criteria and sector criteria. Checks are also carried out during the lending process to establish whether the standards specified in the sector criteria or third-party initiatives referenced in the sector criteria are affected. For example, in connection with the funding of companies with a palm oil connection, a check is carried out to establish whether, in addition to membership of or certification from the Roundtable on Sustainable Palm Oil (RSPO), a 'no deforestation, no peat and no exploitation' (NDPE) policy has been agreed and implemented and whether requirements relating to traceability to the plantations from which the oil was sourced can be guaranteed and demonstrated.

In order to identify where the exclusion criteria and the sector criteria may need to be adapted because of new developments in science and politics or changing societal norms, DZ BANK set up the exclusion criteria working group, which regularly addresses strategic aspects, taking stakeholder input into consideration. Changes to exclusion criteria and sector criteria have to be agreed by DZ BANK's Credit Committee. These changes are also communicated to external stakeholders as part of the sustainability reporting.

Since 2021, the ad hoc exclusion criteria committee has been assisting in the interpretation of exclusion criteria and sector criteria in lending decisions at DZ BANK. It meets every week and comprises members of the Credit, Corporate Banking, Structured Finance, and Strategy & Group Development divisions.

The DZ BANK Group also takes ESG aspects into account in the **management of special funds** consisting of capital paid in by investors in a fund management company. In order to comply with environmental, social, and ethical standards, the group has defined specific exclusion criteria for all funds in which it is responsible for the entire value chain in the investment process. For example, it excludes investments in companies<sup>22</sup> that earn more than 5 percent of their revenue from extracting coal or generate more than 25 percent of their energy from coal and do not have a credible climate strategy.

The **investment of policyholders' money** is subject to separate exclusion criteria. In this context, R+V has defined general exclusion criteria for its investment activities that are applied before the investment review process. The criteria, which are updated on an ongoing basis, cover various controversial economic activities. Restricting investments in coal-based business models is a key aspect of climate change mitigation. That is why R+V does not invest in companies that generate 30 percent or more of their revenue from the mining, treatment, or use of coal. R+V's exclusion criteria apply to all asset classes – particularly equities, interest-bearing securities, loans, and real estate – over which R+V's portfolio managers have a direct influence. In 2022, these criteria were extended to include selected parts of the portfolio that are managed by external portfolio managers. This action supports the decarbonization targets for R+V's investments.

#### Climate policies in the lending business: Sector criteria of DZ BANK

Alongside the groupwide exclusion criteria described above, additionally defined **sector criteria** apply in the same scope within DZ BANK for integrating sustainability matters into the lending process. The aim of this requirement is to integrate sustainability more widely and meet the climate targets. A deviation from this requirement is possible in exceptional cases for higher-level decisions. The sector criteria define general principles for lending in selected sectors that are particularly vulnerable from a sustainability perspective. The criteria also ensure that minimum ESG standards are taken into account. They are applied to ESG-related projects, transactions, and companies that derive more than 50 percent of their total revenue directly or indirectly from the relevant sector and approach DZ BANK as a borrower. In the context of the environment and climate, there are rules relating, for example, to managing forests sustainably (forestry) and not converting peat bogs into agricultural land (agriculture) that address aspects of both climate and biodiversity. This policy is directly linked to the material topics of climate change adaptation, climate change mitigation, energy, pollution, and biodiversity and ecosystems, plus the related IROs.

<sup>22</sup> Does not apply to unit-linked life insurance and occupational pension provision for the account of, and at the risk of, third-parties.

The sector criteria for lending products in DZ BANK's relevant sectors are listed below. They are not limited to geographical boundaries, and are already integrated into the lending process.

FIG. VII.16: SECTOR CRITERIA FOR THE LENDING ACTIVITIES OF DZ BANK

#### Sector criteria

|                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Dams and water infrastructure | <p>DZ BANK acknowledges the recommendations of the World Commission on Dams (WCD) and therefore does not provide funding to any dam projects that do not apply the WCD's recommendations as fully as possible. The customer is required to provide evidence, including that it</p> <ul style="list-style-type: none"> <li>– has secured public acceptance;</li> <li>– has undertaken a comprehensive and unbiased review of options;</li> <li>– has appropriate measures in place during dam operation;</li> <li>– is preserving river ecosystems, biodiversity, and the livelihoods associated with these;</li> <li>– recognizes the rights of people affected by the dam and equitable sharing of the benefits;</li> <li>– adheres to obligations and agreements;</li> <li>– facilitates the cross-border use of rivers for the benefit of peace, development, security, and safety.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Commodities industry          | <p>DZ BANK recognizes that special care and precautions need to be taken in the commodities industry because of political, environmental, and social sensibilities. Particularly in the oil and gas and the metals and mining sectors, it is guided by international conventions and makes reference to best practice. The World Bank and industry associations provide examples of best practice at regional level. Financing decisions specifically take account of the following aspects:</p> <ul style="list-style-type: none"> <li>– Compliance with human rights</li> <li>– Particular consideration of the interests of indigenous people and local communities</li> <li>– Compliance with the minimum standards for occupational health and safety set out by the International Labour Organization (ILO); no child labor</li> <li>– Pollution of the environment in the process of extracting commodities (contamination of groundwater, lakes, and rivers; soil and air pollution) and consideration of the preservation of biodiversity</li> <li>– Protection of designated UNESCO World Heritage sites or other protected spaces</li> <li>– Use of toxic substances in the production process</li> <li>– Compliance with laws</li> <li>– Transparency of income streams between companies and government institutions in the affected country as a means of precluding corruption</li> <li>– Consideration of customary/traditional ownership rights and the principles of 'free, prior, and informed consent: indigenous rights, participation, and the mining industry'</li> </ul> <p>DZ BANK only finances such customers if they already demonstrably fulfill the criteria or are making sustained efforts to fulfill them in the near future.</p> |
| Forestry                      | <p>DZ BANK recognizes that forestry and the handling of forestry resources play a key role in fighting climate change and protecting biodiversity and ecosystems. DZ BANK therefore aims only to finance transactions in this sector with customers that have been certified by the Forest Stewardship Council (FSC), to the relevant national standards under the Programme for the Endorsement of Forest Certification (PEFC), or to recognized equivalent standards. DZ BANK's funding decisions are also guided by the revised version of the World Bank standards (WN OP 4.36, 2013) and by the sustainable forestry criteria specified at the Ministerial Conference on the Protection of Forests in Europe, held in Helsinki in 1993 (MCPFE, Forest Europe since 2009).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Fishing                       | <p>With regard to fishing, DZ BANK recognizes that particular care needs to be taken to preserve biodiversity (such as avoidance of overfishing) and therefore to protect people's livelihoods and aquatic ecosystems. As a result, in this sector it only provides funding where certification has been obtained from the Marine Stewardship Council (MSC) or standards with an equivalent level of recognition have been applied.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Maritime industry             | <p>DZ BANK recognizes that great care must also be taken in the construction and operation of ships. Consequently, it aims not to provide any funding for ships or their operators that fail to meet the following minimum requirements:</p> <ul style="list-style-type: none"> <li>– The rules and regulations of the International Maritime Organization (IMO) are applied.</li> <li>– For inland navigation: The appropriate training has been completed and is evidenced by valid licenses.</li> <li>– The shipyard can provide evidence of a suitably positive track record (for example, not a green-field shipyard); for funding of existing/second-hand projects, proof of appropriate build/maintenance quality is available.</li> <li>– Ship classification by a classification society accepted by DZ BANK that has at least IACS (International Association of Classification Societies) standard</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Sector criteria

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Palm oil    | <p>When dealing with customers or conducting business where there is a connection to palm oil, DZ BANK recognizes that special care and precautions are required to avoid negative impacts on the environment, climate, and human rights. It therefore links its funding for companies in the palm oil value chain to the following minimum requirements:</p> <ul style="list-style-type: none"> <li>– Membership of the Roundtable on Sustainable Palm Oil (RSPO) or another recognized organization whose standards are at least equivalent to those of the RSPO</li> <li>– NDPE policy (no deforestation, no peat, no exploitation) whose scope encompasses not only proprietary palm oil plantations but also suppliers, purchased palm oil, palm fruit, and intermediate products</li> <li>– By 2030 and for the entire volume of palm oil that is traded, processed, or sold:</li> <li>– Full traceability to the plantations from which the palm fruit was sourced</li> <li>– Full RSPO certification or other generally accepted certification that uses standards that are at least equivalent to those of the RSPO</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Agriculture | <p>Through its role in supporting customers' transformation, DZ BANK takes responsibility for people, animals, nature, and the environment. It recognizes that farmers find themselves in a difficult position, having to balance the need for food security with social expectations regarding the way in which food is produced. DZ BANK therefore supports all farmers who adhere to the following sector criteria for agriculture, irrespective of whether they farm conventionally or organically:</p> <ul style="list-style-type: none"> <li>– No conversion of peat bogs into agricultural land</li> <li>– Purchase of land in regions with an indigenous population only in accordance with the principles of free, prior, and informed consent (FPIC)</li> <li>– Compliance with the requirements of German fertilizer legislation (Fertilizer Regulation)</li> <li>– Compliance with the German Plant Protection Act (PflSchG) and the German Plant Protection Implementing Regulations (PflSchAnwV)</li> <li>– Reduction of water consumption as far as possible</li> <li>– Compliance with the German Animal Welfare Livestock Husbandry Regulation (TierSchNutztV), for example not keeping laying hens in cages and only using antibiotics where necessary</li> <li>– Support concentrated on those farms that operate in accordance with the conditionality requirements of the EU's common agricultural policy and are eligible for support</li> </ul> <p>In this context, DZ BANK is committed to the preservation of biodiversity and the reduction of greenhouse gases, and it supports companies that pursue the principle of a circular economy, for example by recycling agricultural waste into bioenergy.</p> |

## Climate policies in asset management

Reflecting what DZ PRIVATBANK sees as investors' growing demands for skilled and effective sustainability-oriented investment, DZ PRIVATBANK has continually updated its sustainability concepts, its structures and processes for integrating ESG factors into the investment process, its range of products and services, and its reporting on sustainability quality in recent years. It signed up to the Principles for Responsible Investment (PRI) in autumn 2021. DZ PRIVATBANK's **responsible investment policy** provides an overview of how ESG strategies and criteria are integrated into its investment process. Responsibility for implementing this policy lies with the member of the Board of Managing Directors in charge of the Investment Office. The policy is implemented in accordance with the requirements of the UN Global Compact. As this is an inhouse policy, the strategies, processes, and criteria described therein apply to all financial products managed by DZ PRIVATBANK. The policy therefore covers significantly more than half of the assets under management.

The policy for a sustainable investment process is intended to ensure that a product's promises in relation to sustainability are kept. The policy's monitoring process, which is based on internal control mechanisms, is designed to ensure that all rules in the investment process are followed. Integration with a monitoring system enables DZ PRIVATBANK to monitor compliance with ESG ratios and blacklists. The ESG ratios are based on the regulatory framework of the EU Sustainable Finance Disclosure Regulation (SFDR) and the EU Taxonomy Regulation, and encompass compliance with minimum shares of taxonomy-aligned investments and investment in environmentally sustainable activities, as well as compliance with the restriction on adverse sustainability impacts in customer portfolios. The blacklists are used to exclude investments, for example those in companies that engage in the manufacture of controversial weapons or commit serious breaches of human rights, environmental protection, or anti-corruption laws. This process relies on data fields from specialist ESG data providers. This is intended to ensure that investments satisfy the environmental, social, and corporate governance criteria and that potential risks are minimized. Overall, this process creates transparency and accountability in respect of DZ PRIVATBANK's customers and stakeholders. Responsibility for implementing this policy lies with the member of the Board of Managing Directors in charge of the Investment Office. The policy applies to

all asset management strategies, but to different extents. Implementation of this policy takes account of related elements, such as the EU taxonomy, the UN Global Compact, and the Sustainable Finance Disclosure Regulation (SFDR).

UMH agreed its 2021 **climate strategy** with the aim of mitigating climate change and supporting the sustainable transformation of the economy. With regard to securities, the strategy is based on the principles of climate neutrality by 2050 and is aligned with the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). Key elements of the climate strategy include support for portfolio companies of UMH in the transformation and the divestment from fossil fuels. Particular emphasis is given to the integration of climate-related risks and opportunities in investment decisions. The strategy encompasses activities along the whole value chain and, geographically, to global markets, whereby funds in developed markets should become climate-neutral sooner. The second management level at UMH, the portfolio management segment management team, is responsible for implementing the strategy.

UMH's **Manage to Green strategy** is a wide-ranging plan to decarbonize the real estate portfolio with the aim of achieving climate neutrality by 2050. The strategy is based on 3 pillars: 'Energy and carbon emissions', 'ESG criteria', and 'Communication and awareness-raising'. Continuous monitoring and management using digital tools, a proprietary sustainability scoring system, and accepted scientific benchmarks such as the Carbon Risk Real Estate Monitor (CRREM) ensures that progress remains measurable and on track. The scope of the strategy includes actively managed funds and activities along the value chain involving primarily commercial buildings in the portfolio. This begins with market research and extends through fund management, purchasing, operation, and leasing to service provider management and sale. Geographically, the concept encompasses UMH's global property portfolios. Relevant stakeholders include tenants, service providers, investors, and public institutions. UMH works closely with these players to achieve the strategy's objectives. Ultimate responsibility for implementing and monitoring the strategy rests with UMH's second management level, the real estate segment management team, who regularly review progress and make strategic decisions concerning the further development of the concept.

The policies described here are directly linked to the material topics of climate change adaptation and climate change mitigation, and the related IROs.

#### Climate policies in the real estate lending business

BSH derives its understanding of sustainability from the UN's sustainable development goals (SDGs), the Paris climate agreement, and the United Nations Global Compact code of conduct. It was the first building society to participate in the Stiftung KlimaWirtschaft [German CEO Alliance for Climate and Economy] and to sign the UN's Principles for Responsible Banking, underlining its sense of corporate responsibility regarding sustainability and its wish to contribute to the implementation of German, European, and international sustainability targets.

BSH's home savings and home finance products, which focus on residential properties, contribute to sustainability objectives in the area of private and mainly owner-occupied housing. This is also enshrined in **BSH's business strategy**, because supporting sustainability is a strategic area of action and is set out in concrete terms in the sustainability and risk strategy, which forms part of the overall business strategy.

BSH's **sustainability strategy** brings together the sustainability activities of the various areas of action and serves as a framework. It addresses the activities and ambitions of the Schwäbisch Hall Group with regard to 5 areas of action: strategy, regulation, market development, business operations, and communication & corporate social responsibility (CSR). The areas of action describe the sustainable transformation required to make owner-occupied housing more climate-friendly and underpin the associated overall corporate responsibility of BSH. The regular review of the Schwäbisch Hall Group's sustainability strategy is carried out annually in an established strategic process. Ultimate responsibility rests with the Sustainability Board. The content and areas of

action are derived in part from the BVR sustainability system and are also based on the 2020 stakeholder survey on material sustainability topics. The content of the strategy is shared with employees through various internal communication channels (such as the intranet and the organization manual).

In January 2022, DZ HYP published its first **Green Bond Framework**, which created the basis for the issue of green Pfandbriefe. The DZ HYP Green Bond Framework is based on the Green Bond Principles of the International Capital Market Association (ICMA) and on the minimum standards for green mortgage Pfandbriefe of the Verband deutscher Pfandbriefbanken (vdp) [Association of German Pfandbrief Banks]. To keep the framework up to date, it is reviewed at regular intervals and revised as necessary. Responsibility rests with the Treasury department and the relevant heads of division.

On December 18, 2024, DZ HYP published a comprehensive update of its Green Bond Framework. The changes mostly related to additional criteria for the selection of eligible projects. These criteria are aligned with those of the EU Taxonomy for a material contribution to climate change mitigation. The updated Green Bond Framework was developed in accordance with the latest market standards, in particular the new vdp minimum standards. It allows the bank to further expand its greenhouse gas emissions from green Pfandbriefe and offer investors a transparent and reliable basis for sustainable investments.

These policies are directly linked to the material topics of climate change adaptation and climate change mitigation, and the related IROs.

#### Climate actions in the lending business: Monitoring in connection with climate target management

Target achievement is monitored by means of **regular management** with the aim of tracking performance in all sectors for which decarbonization targets have been set: fossil fuels, energy, automotive, steel, cement, aviation, shipping, real estate, and chemicals. The half-yearly internal ESG management report creates transparency around the achievement or non-achievement of climate targets (reporting of deviations). Sector-specific actual values are compared with the DZ target pathway on the basis of the established carbon database. Warning thresholds are used to show whether the climate targets have been exceeded. If a red warning threshold is crossed, a proposal is drawn up for possible strategic input. These ad hoc actions are tailored to each context in order to address the specific circumstances in the sector and the current situation in the best possible way.

The strategic input-based system of control runs in parallel with the updating of the carbon accounting figures (reporting dates: June 30 and December 31). The frequency of the carbon calculation and review of the sectors is synchronized with the Pillar III reporting obligation (including completion of Template 3[1]: Targets and distance from International Energy Agency Net Zero 2050). There are currently no plans to increase the frequency, as previous half-yearly data updates have revealed only a minor shift in the primary energy unit (physical emissions intensity) of the actual values in the DZ BANK Group.

Based on defined warning thresholds, a possible overshoot of the agreed climate targets is indicated. A comparison of the updated actual value against the target pathway will identify potential overshoots of the climate targets. These overshoots are divided into 3 categories: below or equal to the target pathway of the DZ BANK banking group (green warning threshold), up to 5 percent above the target pathway of the DZ BANK banking group (amber warning threshold), and more than 5 percent above the target pathway of the DZ BANK banking group (red warning threshold). The warning thresholds for the target pathway of the DZ BANK banking group in the real estate sector are set at 10 percent because increased fluctuation is expected.

If an amber warning threshold is reached, the ESG management report must include a brief explanation on developments within the sector portfolio. If a red warning threshold is crossed, the virtual team made up of experts from the Corporate Management and front-office divisions develop a proposal for possible strategic

input. If a sector looks likely to cross the red warning threshold in the foreseeable future (for example, if a sector remains at the amber warning threshold for a long period), consideration is also given to developing preparatory strategic input. It is currently assumed that in the context of sustainability, the available resources are sufficient to allow the virtual climate target management team to perform its tasks effectively.

This action applies to all financing of relevant activities in each sector (see Fig. VII.17) and is not limited to geographical boundaries. In contrast to the calculation of financed emissions (see chapter VII.2.4), the exposure used as the measure in climate target management is predominantly the lending volume rather than the volume actually drawn down. DZ BANK has already carried out the half-yearly monitoring for the sectors for which decarbonization target pathways were published at the end of 2023. For the other sectors (chemicals, fossil fuels), the first monitoring will be carried out as at the update date of December 31, 2024. The action was introduced without an end date.

FIG. VII.17: RELEVANT ACTIVITIES BY SECTOR – SECTOR VALUE CHAINS

#### Climate actions in the lending business: Advancing Sustainability program

A key action is a dedicated **sustainability program** that was launched as a way of achieving the overarching target of integrating sustainability into DZ BANK's processes.<sup>23</sup> At the start of 2022, DZ BANK's cross-divisional sustainability activities were amalgamated in the integrated Advancing Sustainability umbrella program. The aim of the program is to develop sustainability at a strategic and operational level and to embed it in the organization in order to strengthen the role of DZ BANK and the DZ BANK Group in supporting customers' transformation and satisfy regulatory requirements. The Advancing Sustainability umbrella program is an important part of the sustainability implementation package under DZ BANK's 'Verbund First 4.0' strategy. The sustainability program creates the foundations on which to achieve DZ BANK's sustainability vision. They include further development of the sustainability strategy, the anchoring of sustainability matters within the governance structure, and the integration of ESG factors into the operating model (including necessary adjustments to the IT system landscape).

The content covered by the program was divided into 7 task areas in 2024:

- Sustainability program management: overall management of the program (including further development of the sector targets and climate target management)
- Sustainability focus topics: strategic and overarching topics (including sustainability impact transparency and sustainability product framework)
- Sustainability analytics and sustainability lending requirements: methods relating to greenhouse gas footprints and ESG risks
- Sustainability regulation: expectations of the regulatory authorities and implementation of legal requirements such as the EU Taxonomy and the German Supply Chain Due Diligence Act (LkSG)
- Capture of sustainability data: technical implementation of the functional sustainability requirements with regard to data capture and refinement of the design of the ESG data frontend
- Sustainability data and infrastructure: further development of the sustainability data domains in the federated data lake (Flake), overarching sourcing of sustainability data, and ongoing updating of the sustainability architecture
- CSRD reporting: implementation of CSRD reporting, including environmental, social, and corporate governance standards

The progress of the sustainability program is monitored by the Board of Management-level steering committees. The existence/design of the sustainability program is reviewed as part of the annual project portfolio planning process. The sustainability program is furnished with external and internal resources as part of the project portfolio planning process, which is based on a one-year horizon. There is currently no fixed end date.

#### Climate actions in the lending business: Expansion of renewable energy

Alongside the real estate sector, the energy sector is the most relevant when it comes to the targeted decarbonization of the DZ BANK banking group's portfolios. In 2021, DZ BANK AG set its first absolute funding target for lending volume in the renewable energy sector for the following year. The target has been continually refined since then and is set at €7.1 billion for 2026. DZ BANK sees supporting its customers through their own transformation as an essential prerequisite for playing a key role in shaping a low-carbon future. The utility companies' vision for transformation is also the main lever for transforming the business portfolio.

The expansion of the volume of business in renewable energies is already under way and is not limited to geographical boundaries. No clearly definable financial resources were used to implement this action. It is not possible to create a plausible model of the resulting GHG emission reductions without a disproportionate amount of time and expense due to the diversity of the financed business portfolio and the financial instruments used.

<sup>23</sup> The systematic integration of sustainability matters into DZ BANK's standard processes was initiated on the basis of a resolution of the Board of Managing Directors dated January 7, 2020.

#### Climate and environmental actions in the lending business: Integration of ESG aspects into risk management

To avoid the material risks described in chapter VII.2.1, the DZ BANK Group incorporates ESG aspects into its risk management and the lending process. Within strategic risk management, ESG risk factors are reflected in the strategies. Further rules for the DZ BANK Group's risk appetite framework are derived from the strategy. The governance of the DZ BANK Group's risk appetite framework includes an established 'three lines of defense' model (3LoD model). The responsibilities and tasks relating to sustainability risks are essentially based on the same allocation of roles as used in the established 3LoD model. The first line of defense manages the sustainability risks assumed by the bank. As the second line of defense, the risk management function (in particular Group Risk Controlling and Group Risk Control & Services) determines, evaluates, measures, monitors, and reports sustainability risks as part of the process of managing the material risk types. This is done implicitly in connection with the individual material risk types, and there are also explicit tasks relating to the groupwide management of ESG risks. If necessary, models and processes used in operational risk management are further developed with regard to ESG risks. The DZ BANK Group has initiated various actions to collect sustainability-related data in the lending process and thus to identify ESG risks and integrate them into decision-making processes. All entities in the DZ BANK Group that are required by law or regulation to establish a compliance function have done so in order to mitigate risks arising from non-compliance with legal provisions and requirements. Internal Audit, which is the third line of defense, examines the appropriateness of the arrangements for managing sustainability risks as part of its audit schedule.

DZ BANK's Board of Managing Directors lays down the core risk policy guidelines and decisions and bears responsibility for them. It defines the company-wide framework for risk appetite and risk-bearing capacity, as well as the risk management targets and the actions taken to achieve them. The group entities' compliance with the risk strategies is monitored on an ongoing basis. The Board of Management is apprised of the overall risk situation in a timely manner, and the annual alignment and updating of the risk strategies is conducted in close collaboration with the relevant divisions and affected group entities.

Loan applications are systematically assessed against relevant sustainability criteria as part of DZ BANK's credit check process. This is based on the DZ BANK ESG checklist, which in turn is aligned with the 10 principles of the UN Global Compact. The focus is on the dimensions of climate and environment, social responsibility, corporate governance, and the customers' general engagement with these. The ESG checklist helps to gauge the sustainability efforts of a customer or project and determine the reputational impact on DZ BANK. The checklist's findings are depicted on a four-level scale. Loan applications with an elevated or strong ESG-related negative reputational impact must be documented accordingly and forwarded to a higher authorization level for approval. Within the DZ BANK Group's credit check process, the checking of sustainability matters is adapted to the business model of the group entities.

In addition to gauging the ESG-related reputational impact on DZ BANK, the processes for the extension and monitoring of loans also involve assessing the effects of ESG aspects on the credit risk of DZ BANK's corporate customers. The ESG credit risk score is used for this. This score supplements the internal credit rating for corporate customers by providing an additional statement on the probability and scope of a potential future change in creditworthiness due to sustainability matters for a medium-term time horizon (5 to 10 years). The process provides a cross-sectoral statement on creditworthiness. The ESG credit risk score encompasses physical environmental risks and transition risks, social risks, and corporate governance risks, providing a separate subscore for each risk type. The individual results for the different risk types within the ESG credit risk score have 5 possible risk levels, ranging from A (very low risk) to E (very high risk). Where relevant, ESG credit risk is also taken into account in regular and ad hoc credit control.

The ESG risk factors are integrated into the reporting process for the risk categories in the monthly and quarterly overall risk report. The DZ BANK Group's sustainability risk report also summarizes the reporting on ESG risks to senior management. It includes, in particular, business portfolio information for sectors that are of special importance from a sustainability perspective. The banking sector's relevant credit portfolio is analyzed in detail with regard to carbon emissions, ESG credit risk scores, and climate alignment in combination with ratings and lending volume. The crucial factors are primarily transition risks, which are reflected in the ESG credit

risk score. Physical risks for the relevant lending exposures of the DZ BANK Group are also analyzed, in particular for the real estate finance of BSH and DZ HYP and business with corporate customers. The DZ BANK Group's business portfolios that are relevant to ESG risks are analyzed separately by sector, and the relevant metrics, such as carbon emissions, ESG credit risk score, and climate alignment are outlined. The sustainability risk report is produced every six months and is approved by the Risk Committee of DZ BANK.

#### Climate actions in asset management

In view of its fiduciary duties of protecting and increasing investors' wealth, DZ PRIVATBANK regards climate change as extremely relevant. Assessing climate-related risks is a complex task, as is the assessment of the financial risks that companies face in connection with the climate. Taking a fundamental approach to dealing with this issue in **asset management**, DZ PRIVATBANK intends to draw up a **climate strategy** with the Paris climate agreement in mind in order to contribute to the fight against climate change and help to finance the sustainable transformation of the economy. Responsibility for this strategy lies with the member of the Board of Managing Directors in charge of the Investment Office. The monitoring processes are currently being put in place.

DZ PRIVATBANK **redesigned its sustainable investment process** in 2022 in order to implement regulatory requirements and develop further ESG-related investment solutions. It encompasses the entire investment process, from transparency when promoting environmental and social characteristics in pre-contractual disclosures, and comprehensive rules and in-depth analysis regarding sustainability criteria for investment decisions, through to documentary evidence in the periodic regulatory ESG reporting. The final step in the sustainable investment process is the assessment of the potential returns from all possible ESG investments. This assessment is conducted by the portfolio managers ahead of the final allocation decision.

Several actions were initiated in 2024 to implement the UMH climate strategy. Ongoing active dialogue was sought with **carbon-intensive companies** in the UMH portfolio. The funding of fossil fuels was gradually scaled back and a transformation rating to assess companies' climate strategies was introduced. These issuers are called upon to define long-term, medium-term, and short-term emissions reduction targets, along with the implementation and capital expenditure plans needed to achieve them. The speed at which emissions are being reduced is monitored on an ongoing basis. The issuers that do not meet these requirements by the specified deadlines are gradually excluded from the securities portfolios. UMH continuously monitors the 50 most carbon-intensive emitters of greenhouse gases in the portfolio for their short-term, medium-term, and long-term emission reduction targets and tightens the requirements on the companies every five years:

- From 2025, it will no longer be possible to invest in significant emitters of greenhouse gases that refuse to publish complete long-term climate targets (Scope 1, Scope 2, and Scope 3, where standardized calculation methods exist).
- From 2030, it will no longer be possible to invest in significant emitters of greenhouse gases that refuse to publish complete short-term and medium-term climate targets.
- From 2035, it will no longer be possible to invest in significant emitters of greenhouse gases that refuse to present a credible plan to reach the emission reduction targets.
- From 2040, it will no longer be possible to invest in significant emitters of greenhouse gases that are unable to prove that the intensity of their greenhouse gas emissions is consistent with the defined pathway toward climate neutrality. Furthermore, investment planning must not conflict with the climate change mitigation targets.

The credibility of the transformation of many companies in particularly high-emission industries is checked using systematically generated **transformation ratings**. Business models that cannot be transformed are being gradually excluded. One of the actions planned is the complete transition away from the extraction of thermal

coal by 2025. Following on from the decision to **phase out coal** back in 2020, an exit strategy for investments in oil and gas extraction was adopted in 2024. The actions extend to all securities-based asset classes, with sectoral and regional differences taken into account. In the case of government bonds, currencies, derivatives, and commodities, management on the basis of financed emissions is not consistently possible or useful at present.

Under its Manage to Green strategy, UMH uses various instruments for real estate assets, such as its proprietary **sustainable investment check**, which helps to analyze the ESG criteria of a property or development project being considered for purchase. The check is repeated annually for buildings held in the portfolio. The evaluation system comprises 7 categories, including data relevant to the building's structure, operational measures, and user comfort. Further actions under the strategy are the **installation of energy monitoring systems** and **timetables for energy efficiency improvements**. The success of all actions can be tracked in the Immosustain sustainability management software on the basis of consumption data, carbon emissions, and the CRREM climate pathways. CRREM stands for Carbon Risk Real Estate Monitor and provides science-based, recognized decarbonization pathways for real estate.<sup>24</sup>

#### Climate actions in the real estate lending business

As part of its sustainability strategy, BSH wants to provide its customers and partners with expert support and guidance on projects, whether involving new builds or existing properties. To this end, the majority of the field sales team have become certified **advisors for modernization and development lending**. The certification process began in 2023 and is continued on an ongoing basis. Main focal points include continuing professional development (CPD) on the modernization of residential properties and introduction of energy efficiency improvements. BSH provides its field sales team with specific training in this regard and is partnering with Bundesverband Gebäudemodernisierung e.V., Germany's national building modernization association. The CPD provided to field sales advisors will enable them to give customers more targeted advice on energy efficiency measures. In addition to the CPD, the field sales advisors use a **digital tool** called **SanierungsGuide** (renovation guide) to advise BSH customers. The tool contains all relevant property data, which it uses to produce a rough calculation of the property's current efficiency class and identify short-term and long-term renovations that would have a positive impact on energy performance. This can potentially help to achieve the climate target of continuously reducing the carbon footprint in the credit portfolio of the Schwäbisch Hall Group.

Another action resulting from BSH's business and sustainability strategy is the inclusion via click options of climate and environmental risks in **pricing**, based on the energy efficiency class of the funded real estate. Funding is offered for real estate in the highest energy efficiency classes, A and A+, at a preferential interest rate. Since July 2024, energy efficient improvements resulting in a 30 percent or more reduction in the building's primary energy consumption have also received preferential interest rates. Further changes to the pricing are planned for 2026. However, this is an ongoing action that is dependent on developments in the market. Integration into pricing incentivizes the granting of modernization loans and loans for properties with high energy efficiency ratings, which potentially contributes to achievement of the climate target of continuously reducing the carbon footprint in the BSH credit portfolio.

In 2022, DZ HYP began focusing on the **classification of the lending business**, paying particular attention to energy efficiency and the environmental elements of the financed properties. **Energy performance certificates** are required for new business and the relevant data from these certificates is systematically captured. This requirement applies to retail customers if the property owner is required to produce certificates under the Buildings Energy Act. In new business with retail customers, a sustainable eco-loan was launched at the start of May for properties in a very good energy efficiency class and/or with low final energy consumption. **Development lending programs from Germany's KfW development bank** – 'Climate-friendly new construction – residential buildings', 'Efficiency House modernization', 'Home ownership for families', and 'Young buys

<sup>24</sup> This does not apply to UMH's mandates for real estate service investment management companies or to the Zentral Boden Immobilien Group (ZBI).

old' – have been integrated into the retail sales channels. In existing business, DZ HYP's goal is to gradually obtain further energy performance certificates.

The bank implemented an extended ESG analysis at business partner level in 2023 in order to place a greater emphasis on sustainability matters in its Public Sector business line. The analysis is known as the **DZ HYP sustainability ranking for local authorities** and is an integral element of the local authority lending and decision process.

DZ HYP funds sustainable properties in Germany through green Pfandbriefe that meet the suitability criteria defined in the Green Bond Framework. The focus is on the properties' energy efficiency, which is verified using energy performance certificates, similar documentation, or the energy standard. The first green mortgage Pfandbrief was issued in February 2022. Since then, sustainable funding based on green mortgage Pfandbriefe has become firmly established in DZ HYP's business model and underlines the bank's commitment to sustainable financing practices.

#### Climate actions in the insurance business

The actions initiated by R+V in investment relate to portfolio management, which represents the decarbonization lever. Portfolio management encompasses all activities relating to the management of an investment portfolio, particularly adjusting the weighting. It thus includes decarbonization of the real economy.

In April 2023, R+V joined **NZAOA** in order to focus on climate change mitigation as a sustainability matter and to reinforce its own climate target. The German subsidiaries Sprint, carexpert, and GWG, and the Italian subsidiary Assimoco are not included. A key action is aimed at encouraging an economically feasible transition that is compatible with the Paris climate goals through dialogue with the companies in which members invest.

Engagement targets are an important aspect of NZAOA membership. In 2024, R+V established a structured **engagement process** for the companies with the highest emissions in its investment portfolio. The NZAOA-related engagement targets inform investors' dialogue with the companies in which they invest, with the aim of helping the real economy to pursue climate targets in order to decarbonize. The engagement activities are aimed at reducing the R+V portfolio's carbon footprint so that climate neutrality can be reached in 2050. The aforementioned five-year interim targets have been defined to keep track of the action. The engagement process is designed to be an ongoing action. It encompasses the asset classes 'listed equities of large European companies' and 'listed bonds of large international companies' (not including finance companies).

Dashboards provide portfolio managers with sustainability-related information on the portfolio. A key component of the dashboard is the **carbon analyzer**, which presents climate-related data. This not only heightens awareness of the effects of investment decisions on the achievement of greenhouse gas emissions reduction targets, but also enables the investment portfolio to be managed in a way that is compatible with the company's sustainability targets. The use of the carbon analyzer and the associated alignment of the investment portfolio are thus central to the achievement of the greenhouse gas emissions reduction targets. The impacts of the action can only be quantified in relation to specific investment decisions made on the basis of results from the carbon analyzer. The action was initiated in the reporting year and includes the aforementioned equities and bonds asset classes.

R+V uses continuous **portfolio reallocations** as a means of guaranteeing the achievement of greenhouse gas emissions reduction targets. These can only be quantified once they have been carried out. This ongoing action will be taken as and when required and encompasses the aforementioned equities and bonds.

Since 2018, R+V has also excluded from its portfolio companies that generate 30 percent or more of their revenue from the mining or treatment of coal. R+V's **exclusion criteria** apply to the following asset classes: equities, interest-bearing securities, and real estate over which R+V's portfolio managers have a direct influence. This excludes the mortgages and commercial real estate asset classes. In 2022, these criteria were extended to

include selected parts of the portfolio that are managed by external portfolio managers. This action supports the decarbonization targets for R+V's investments. Further development of the criteria used to exclude investments is planned for 2025. The effect of this action cannot be quantified until it has been fully implemented. Assimoco has excluded investments in coal.

#### Voluntary commitments and training for employees<sup>25</sup>

Sustainability is a key pillar of the DZ BANK Group's corporate culture and a factor in many of the group's voluntary commitments:

FIG. VII.18: VOLUNTARY COMMITMENTS

#### Global

|                                                     |                         |

| Equator Principles                                  | DZ BANK                 |

#### National

|                                                                        |               |
|------------------------------------------------------------------------|---------------|
| Collective commitment to climate action of the German financial sector | DZ BANK       |
| Net Zero Banking Alliance Germany                                      | DZ BANK       |
| German Sustainability Code                                             | DZ PRIVATBANK |
| German CEO Alliance for Climate and Economy                            | BSH, UMH      |

The entities in the DZ BANK Group pursue a wide range of engagement activities and are members of a large number of associations and other advocacy organizations in order to address the expectations of stakeholders in a dialogue with representatives from business, society, and politics, and to promote their own interests (see chapter VII.4.5). These voluntary commitments entail a number of responsibilities. For example, the **Principles for Responsible Banking (PRB)** set quantitative impact targets, one of which is climate-related, while the **financial sector's voluntary commitment to climate change mitigation** prioritizes the 1.5°C target.

The German financial sector's voluntary commitment to climate change mitigation includes the integration of climate risks into risk management processes, the promotion of sustainable financial products, and support for the transition to a low-carbon economy. The aim of these actions is to reduce the financial risks of climate change and encourage investment in sustainable projects. The Net Zero Banking Alliance Germany is a group of 7 German banks. The initiative commits the banks to transform their portfolios in alignment with the climate targets of the Paris Agreement. By entering into these voluntary commitments, DZ BANK is demonstrating that climate and sustainability targets are already being taken fully into account.

In order to build up the sustainability expertise of its own employees, in 2022 DZ BANK developed and rolled out a **foundation training course in sustainability** as well as a **training course in sustainability sales** that included topics on climate and the environment. In 2024, the Supervisory Board received internal training lasting several hours on the subject of sustainability for the fourth time. The implementation of these actions is monitored as part of the relevant higher-level standard processes of the divisions (such as tracking employees' participation in training courses).

<sup>25</sup> Further information on employee training and development can be found in chapter VII.3.2.2 'Employee development'.

### 2.3.2 Pollution in the business portfolio (E2-1, E2-2, E2-3)

#### Pollution targets

The DZ BANK Group has not yet defined specific quantitative targets in the area of pollution due to low materiality. DZ BANK has set a target for the energy sector of increasing the use of renewable energy, which, among other things, will make a positive contribution to reducing pollution, as described in chapter VII.2.3.1. Activities within the DZ BANK Group and the individual entities aimed at the further expansion of environmental topics are supported in particular by the following policies and actions.

#### Pollution policies

Generally, the business portfolio-related policies in the DZ BANK Group follow a holistic understanding of sustainability and the environment and go beyond the topic of climate change. A wide range of sustainability and environmental topics, in particular pollution, are therefore implicitly addressed in existing, overarching policies.

At DZ BANK Group level, the use of **exclusion criteria**, as described in chapter VII.2.3.1, is particularly important. In addition to the climate-related standards, the exclusion criteria also set standards for lending and for own-account investing in polluting industries, in particular 'oil/gas extraction' and 'significant threats to the environment'.

DZ BANK also takes pollution into account in its **sector criteria**, as described in chapter VII.2.3.1. In the commodities industry, for example, environmental pollution caused by the process of extracting the commodities is considered as part of the lending decision.

There is no policy focusing solely on pollution, but various aspects of the aforementioned exclusion criteria and sector criteria contribute directly to the pollution-related IROs.

#### Pollution actions

The DZ BANK Group entities implement actions to ensure compliance with the exclusion criteria in the area of pollution as part of the requirements for the lending business, own-account investing, and special funds. DZ BANK's exclusion criteria working group works on the thematic further development of pollution-related topics on an ongoing basis, and the risks described in chapter VII.2.1 arising from other environmental matters are managed within the relevant business areas.

The DZ BANK Group avoids significantly contributing to pollution in its lending and own-account investing activities, for example by excluding the direct funding of certain oil extraction activities (upstream) and oil/gas extraction that involves fracking, oil shale / oil sands, Arctic drilling, or deep sea mining. The funding of uranium extraction, mining activities involving the mountain-top removal method, asbestos extraction, projects/assets or activities that pose a high risk of nuclear, biological, or chemical contamination (excluding biogas facilities), and hazardous goods with insufficient measures to minimize risk are also excluded, as these activities and projects/assets create significant environmental risks.

DZ BANK bases its lending on the established sector criteria and, for example, recognizes that special care and precautions need to be taken in the commodities industry because of political, environmental, and social sensibilities. When approving loans, particularly in the oil and gas and the metals and mining sectors, it is guided by international conventions and makes reference to best practice examples from the World Bank and industry associations at regional level. The most controversial aspects are specifically examined (see sector criteria for the commodities industry in chapter VII.2.3.1) and funding is only provided to customers that already fulfill the criteria or are making sustained efforts to fulfill them in the short or medium term.

### 2.3.3 Biodiversity and ecosystems in the business portfolio (E4-1, E4-2, E4-3, E4-4)

Biodiversity and ecosystems are examined as part of the DZ BANK Group's impact and risk analysis. With regard to the resilience of the strategy and business model, biodiversity and ecosystems are considered as part of physical and transition risks to the climate and environment. This includes aspects such as land degradation, desertification, and land mass effects. The method is based on the ESG risk management framework described in chapter VII.2.1. The current assessment identified no risks in the area of biodiversity that imply a risk for the business portfolio, with the exception of operational risks (short, medium, and long-term increased legal risk).

Legal risks arising in connection with transition risks relating to climate and nature (particularly greenwashing), and governance risks relating to insufficiently functional internal control and risk management systems are gauged to have moderate materiality for the DZ BANK Group, and their influence is consequently rated as potentially material. The assessment of the resilience of the current business model in respect of biodiversity and ecosystems is carried out via an internal stakeholder survey within the DZ BANK Group.

At the same time, the potential opportunities that biodiversity could present for the DZ BANK Group are currently being evaluated.

The global assessment of the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES) emphasizes the central role of climate as a driver of biodiversity topics. In this context, all (sector-related) climate targets, policies, and actions described in chapter VII.2.3.1 are also relevant for promoting and protecting biodiversity. This also applies to the product offering of the DZ BANK Group, where products such as sustainability-linked loans could be adapted to take account of biodiversity aspects, in order to have a positive impact.

The social impacts that could potentially arise from changes to biodiversity have not yet been analyzed in detail. However, this aspect will be included in future studies and analyses to enable a more comprehensive assessment of the relationships between biodiversity and social impacts.

#### Targets for biodiversity and ecosystems

Biodiversity and ecosystems is a new topic area that is still in development. No specific quantitative targets have been defined for biodiversity and ecosystems in the DZ BANK Group. However, most of the DZ BANK Group is involved in a variety of ways to promote these environmentally relevant matters and prevent negative impacts being caused by investing in activities that damage biodiversity and ecosystems. Their ambitions are supported by the following policies and actions.

#### Policies for biodiversity and ecosystems

Given the central role of the climate as a driver of impacts and risks in the area of biodiversity and ecosystems, most of the business portfolio-related policies in the DZ BANK Group are based on a holistic understanding of sustainability and the environment and go beyond the topic of climate change. A wide range of sustainability and environmental topics, in particular biodiversity, are therefore implicitly addressed in existing, overarching policies. These policies are thus also directly linked to the material topic of biodiversity and ecosystems, and the related IROs.

At DZ BANK Group level, the use of **exclusion criteria**, as described in chapter VII.2.3.1, is particularly important. In addition to the climate-related standards, the exclusion criteria also set standards for lending and for own-account investing in areas with a direct link to biodiversity and ecosystems. The exclusion criterion 'trading of animals and plants', in particular, excludes funding for activities involving the trading of endangered animal or plant species in accordance with the CITES (Convention on International Trade in Endangered Species) list. Furthermore, the exclusion criterion 'significant threats to the environment' excludes funding for companies or projects that pose significant threats to the environment.

DZ BANK has also taken account of biodiversity in its **sector criteria** for the following areas: dams and water infrastructure, forestry, commodities, and agriculture. It acknowledges the recommendations of the World Commission on Dams (WCD) and does not provide funding to any dam projects that do not fully apply these recommendations. Customers must provide evidence of, among other things, the raising of public acceptance, the preservation of river ecosystems and biodiversity, and the equitable sharing of benefits.

DZ BANK also recognizes in its **sector criteria** that forestry and the management of forestry resources play a key role in the context of climate change and the protection of biodiversity and ecosystems. It therefore only finances organizations in this industry that have been certified by the **Forest Stewardship Council (FSC)**, to the relevant national **standards under the Programme for the Endorsement of Forest Certification (PEFC)**, or to recognized equivalent standards. Its financing decisions are also guided by the revised **World Bank standard** (WN OP 4.36, 2013) and by the criteria specified at the Ministerial Conference on the Protection of Forests in Europe, held in Helsinki in 1993 (MCPFE, Forest Europe since 2009).

In connection with the sector criterion for the commodities industry, the environmental pollution caused by the process of extracting the commodities and the importance of preserving biodiversity are considered as part of the lending decision.

In line with the sector criterion for agriculture, DZ BANK is committed to preserving biodiversity and reducing greenhouse gases.

UMH has established a clear framework for the protection and promotion of biodiversity in its **biodiversity policy**. The policy supplements the existing climate strategy and defines in greater detail how UMH deals with biodiversity aspects in the areas of business, securities, and real estate. The aim is to systematically integrate biodiversity risks into investment decisions, minimize negative impacts, and be nature positive in the long term, in accordance with global initiatives such as the Kunming-Montreal Global Biodiversity Framework and European requirements such as the EU Biodiversity Strategy for 2030. As a financial investor with a long-term investment horizon, UMH is committed to responsible investment, environmental management, and dialogue with external stakeholders. Responsibility for the implementation of the policy in asset management lies with the second management level of UMH in the Real Estate and Portfolio Management segment management teams.

As part of its business and risk strategy, VR Equitypartner also takes **excluded industries** into account when making investments. These include companies whose business model is associated with endangered animal and plant species and products on the CITES list. Investments in companies whose activities threaten biodiversity are excluded. The implementation of this policy is intended, in particular, to prevent potentially negative impacts on biodiversity and ecosystems. Every 2 years, the business and risk strategy is reviewed to ensure it is up to date and is amended if necessary. It is also updated, if required, in response to specific events. Compliance is ensured through process requirements and checks carried out by a second person. Monitoring is devolved according to subject matter. In accordance with the policy on authorization levels, responsibility rests with the Supervisory Board, the Managing Directors, or the relevant team managers at VR Equitypartner.

#### Actions for biodiversity and ecosystems

The DZ BANK Group entities implement specific actions to ensure compliance with the aforementioned biodiversity policies. They also drive thematic development and manage the risks described in chapter VII.2.1 arising from other environment-related topics in their respective businesses.

DZ BANK bases its lending activities on the established sector criteria with the expectation that this will prevent potential negative impacts on people, animals, nature, and the environment. It recognizes the key role that agriculture plays in balancing the need for food security with society's expectations regarding the way in which food is produced. It therefore supports all farmers who adhere to the **sector criteria for agriculture**,

irrespective of whether they farm conventionally or organically. The criteria include reducing water consumption and complying with German fertilizer legislation, the German Plant Protection Act (PflSchG), and the German Animal Welfare Livestock Husbandry Regulation (TierSchNutztV).

DZ BANK is also committed to the preservation of biodiversity and supports companies that pursue the principle of a circular economy, for example by recycling agricultural waste into bioenergy. It finances land purchases in regions with an indigenous population only in accordance with the principles of **free, prior, and informed consent** (FPIC) and focuses on farms that operate in accordance with the EU's common agricultural policy and are eligible for support. The topic of agriculture and the agriculture portfolio were analyzed comprehensively based on a case study, in collaboration with internal DZ BANK experts and external sector and association experts. DZ BANK analyzed the impacts of its agriculture portfolio on the basis of the SDG classification, including cultivation types and biogas installations, to make the impacts, risks, and opportunities fully transparent. The results of the analysis were presented as part of a 'sector sprint light' for agriculture within the Advancing Sustainability program. The results of the regular SDG classification for DZ BANK's credit portfolio are reported internally to the Board of Managing Directors every six months. In addition, case studies were used to identify the impact of customers along the agricultural value chain, for example in soybean cultivation and deforestation.

R+V developed a **biodiversity score** in 2024 that relates to the sustainability matters of biodiversity and ecosystems in investment activities. This is intended to be part of the ESG integration process from 2025 and, going forward, will apply to listed securities and the downstream value chains of their issuers. The planned implementation is based on the method documentation for ESG integration, which was revised and refined in the reporting year. The addition of biodiversity as a factor is intended to improve the ESG integration process, with both inside-out and outside-in effects being taken into account. The provision of additional information on biodiversity in the ESG task force should help to refine the control measures with regard to sustainability. This should be implemented on a case-by-case basis through the actions available in connection with ESG integration (increased monitoring, portfolio reduction, engagement).

The actions to implement the UMH biodiversity policy include several that focus on product design. In 2024, biodiversity-critical sectors were analyzed on an ongoing basis and relevant biodiversity risks were assessed using the ENCORE tool and integrated into the investment processes and decisions. **Engagement and exclusion criteria** were also applied to ensure that companies make progress. Engagement activities were aimed at companies in sectors such as agriculture, consumer goods, and oil and gas, in order to reduce deforestation and other negative impacts. At the same time, exclusion criteria were introduced for companies that do not meet biodiversity standards such as the UN Convention on Biological Diversity or UNESCO guidelines. In its real estate business, UMH applies **environment checks to purchases** and **actions that promote biodiversity**, such as green roofing and the creation of biotopes.

The actions extend along the upstream and downstream value chains and focus on regions with greater biodiversity, such as tropical forest areas, and on European markets. In the short term, the focus is on the **implementation of the recommendations of the Taskforce on Nature-related Financial Disclosures (TNFD)**, the integration of comprehensive biodiversity data, and increased engagement in critical sectors. In the medium term, the aim is to prioritize biodiversity-friendly investments and actively reverse biodiversity loss. The long-term objective is to make the portfolio climate neutral, taking biodiversity aspects into account.

## 2.4 Greenhouse gas emissions of the DZ BANK Group (E1-6, E1-7, E1-8)

The DZ BANK Group reports the greenhouse gas emissions resulting from its own operations in CO<sub>2</sub> equivalents. These are generally calculated using the emissions factors included in the calculation tool provided by the VfU for the financial sector. The process covers greenhouse gas emissions that arise directly from burning fuels, including fuel consumption of fleet vehicles and loss of coolant (Scope 1), greenhouse gas emissions arising from the use of electricity and district heating (Scope 2), and greenhouse gas emissions arising from upstream and downstream activities in the value chain (Scope 3, own operations).

#### Scope 3 significance analysis

In 2024, a significance analysis of the operational Scope 3 categories was carried out in connection with the sustainability reporting. Categories accounting for less than 3 percent of total operational Scope 3 greenhouse gas emissions (categories 1–14) for the DZ BANK Group are rated as not significant. The Scope 3 categories classified as not significant were not included in the recording of total emissions. An exception was made for category 5, greenhouse gas emissions from waste generated in own operations. Due to stakeholder interest, these greenhouse gas emissions are included in the reporting despite not constituting a significant share. A detailed list of Scope 3 categories, divided into 'significant' and 'not significant', is shown below.

#### Significant:

- Greenhouse gas emissions from purchased goods and services (category 1)
- Greenhouse gas emissions from capital goods (category 2)
- Greenhouse gas emissions from fuel and energy-related activities (category 3)
- Greenhouse gas emissions from waste generated in own operations (category 5)
- Greenhouse gas emissions from business travel (category 6)
- Greenhouse gas emissions from employee commuting (category 7)
- Greenhouse gas emissions from downstream leased assets (category 13)

#### Not significant:

- Greenhouse gas emissions from upstream transportation and distribution (category 4)
- Greenhouse gas emissions from upstream leased assets (category 8)

Scope 3 greenhouse gas emissions from downstream transportation and distribution (category 9), the processing of sold products (category 10), the use of sold products (category 11), the end-of-life treatment of sold products (category 12), and franchises (category 14) do not apply in the context of financial services provision and therefore were not recorded.

#### Procedure for determining greenhouse gas emissions from own operations (Scopes 1, 2, and 3)

Due to the very different ways in which consumption data is collected and made available within the DZ BANK Group, a standardized procedure was defined for determining the consumption data from own operations in order to achieve the best possible data quality. The data quality categories (in descending order) were defined as follows: (i) primary data as at September 30, (ii) primary data from the reporting year prior to September 30, (iii) data from the prior years, and (iv) estimated data. To determine standardized whole-year figures for the individual categories across the group, firstly, available data with a reporting date of September 30 or earlier in the reporting year was collected, taken from previous years, or estimated by experts and extrapolated to December 31 using a rule developed by DZ BANK, either on a straight-line basis or on a weather-adjusted basis (for seasonally dependent emissions sources such as electricity).

The DZ BANK Group's CO<sub>2</sub> emissions were then calculated on the basis of the parameter data for the individual DZ BANK Group entities using ecoinvent emissions factors included in the calculation tool provided for the financial sector by the VfU. Individual emission factors published by government agencies are also used, such as those relating to country-specific electricity mixes.

#### Procedure for determining financed emissions

DZ BANK considers the principles and provisions of the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard when determining which financing is to be included in the calculation of financed greenhouse gas emissions. Other financing, for which DZ BANK has identified material impacts, risks, and opportunities, is also included. Due to the transitional provisions for entity-specific disclosures, the financed emissions for special funds are not reported at this time. The calculation of financed greenhouse gas emissions (Scope 3 greenhouse gas emissions, category 15) is based on the standards of the Partnership for

Carbon Accounting Financials (PCAF), in particular Part A – Financed Emissions, which applies to financial institutions pursuant to ESRs E1-6 AR 46 (b). PCAF is a global market standard for financial institutions that measures the carbon emissions of their lending and investment portfolios. The disclosed greenhouse gas emissions are CO<sub>2</sub> equivalents (CO<sub>2</sub>eq), which are all of the greenhouse gases specified in the Kyoto Protocol converted into the equivalent amounts of CO<sub>2</sub>. The calculation of financed emissions is closely based on external standards, but there is no validation by an external body. The methods and figures reported below relate to financed emissions.

The basis for reporting the financed emissions consists of all on-balance-sheet transactions of a finance nature within DZ BANK's scope of consolidation for the purposes of the IFRS consolidated financial statements. These transactions provide direct financial support for counterparties and thus potentially generate carbon emissions resulting from the financed activities. Loans, shares, and bonds are examples of products of a finance nature. To ensure that the finance nature is fully reflected, there is no netting of underlying assets from hedging/derivatives.

The financed portion of the total Scope 1 to Scope 3 greenhouse gas emissions of the counterparty are calculated proportionately based on the amount of finance drawn down relative to the enterprise value. The first step in this calculation is determining the total greenhouse gas emissions of an asset (for example a company). These are then multiplied by an attribution factor. The attribution factor is the ratio of the proportion financed by the bank to the total asset (e.g. the value of the company being financed). This enables the asset's financed emissions that are attributable to the bank to be calculated. The attribution factor is based on an on-balance-sheet perspective, i.e. only the lines actually drawn down without unmatched loan commitments are taken into account as outstanding amounts. For the real estate asset class, however, amounts under a real estate finance arrangement that have not yet been paid out (e.g. tranches not yet drawn down during the construction phase) are also taken into account.

In the model calculation of financed emissions, the way in which greenhouse gas emissions are determined depends on the availability of data. Preferably, directly collected greenhouse gas emissions data or externally published greenhouse gas emissions data is used in the calculation (primary data). Emissions data relating to a customer that is obtained through research and quality assurance is classified as primary data. Emissions data that can be obtained from third-party data providers is also classified as primary data, but only such emissions data that the data providers state as being obtained from reports is used. The share of financed emissions from primary data indicates the percentage of financed emissions determined from primary data. The figure for the DZ BANK Group is 25.71 percent. Estimates are used for the remaining share.

If published information is not available, the customer-specific emissions are determined using bottom-up or regression models or using granular sector-specific and country-specific average values from external data providers. The accuracy of the data varies accordingly, with primary data being the most accurate and granular average values being the least accurate. The data to be used is therefore decided upon using a cascading logic, depending on the availability of data. This is in line with the method commonly used in the market.

Estimates are used in some cases to determine the financed carbon emissions, as described above, so the results are subject to a certain degree of inaccuracy in the measurements. This is primarily because customer-specific data has to be inferred from models or average values if no data is available. The assumption here is that the customer generates sector-specific or country-specific greenhouse gas emissions, meaning that a corresponding average value can be assumed for the customer. Based on current knowledge, this approach does not result in any significant inaccuracies in measurements.

Calculating the financed emissions creates challenges, especially in terms of data accuracy. DZ BANK aims to continually improve its methods and processes in order to deal with these challenges. This includes regularly reviewing and updating the models and assumptions used, to ensure that the greenhouse gas emissions reporting data is as accurate and up to date as possible.

In the DZ BANK Group, a central group risk management unit at DZ BANK calculates the financed emissions from banking book and trading book activities, with the exception of certain units and emissions classes that are calculated on a decentralized basis within the group. Specifically, R+V is responsible for recording all financed emissions of R+V and its material subsidiaries, while DZ HYP and BSH calculate the financed real estate emissions. By contrast, greenhouse gas emissions from financing activities that are attributable to DZ HYP and BSH but are not directly related to real estate are calculated centrally.

The following figure summarizes the DZ BANK Group's Scope 1 to Scope 3 greenhouse gas emissions and total greenhouse gas emissions.

FIG. VII.19: THE DZ BANK GROUP'S GREENHOUSE GAS EMISSIONS

| in t CO <sub>2</sub> eq                                                         | Retrospective |             |             |           | Milestone and target years |      |       |                             |

see chapter  
VII.2.2.1 and VII.2.3.1

Fig. VII.19 includes the greenhouse gas emissions generated by subsidiaries of R+V that are not among the entities that are fully consolidated for the purposes of the consolidated financial statements. For greater transparency, the Scope 1 and Scope 2 GHG emissions are disclosed again separately below. The Scope 1 GHG emissions for these entities amounted to 9,790.6 tCO<sub>2</sub>eq, while market-based Scope 2 GHG emissions amounted to 2,242.8 tCO<sub>2</sub>eq and location-based Scope 2 GHG emissions to 3,063.8 tCO<sub>2</sub>eq. For the entities within the scope of consolidation of the IFRS consolidated financial statements, the Scope 1 GHG emissions amounted to 30,376.4 tCO<sub>2</sub>eq, while market-based Scope 2 GHG emissions amounted to 56,468.2 tCO<sub>2</sub>eq and location-based Scope 2 GHG emissions to 87,357.2 tCO<sub>2</sub>eq.

Contractual instruments in the context of market-based Scope 2 GHG emissions include a number of mechanisms and agreements that companies can use to reduce their indirect GHG emissions from purchased energy. Bundled contractual instruments are traded alongside the generated energy to provide proof of specific characteristics (e.g. renewable energy sources). Of the market-based Scope 2 GHG emissions disclosed in Fig. VII.19, 26 percent were attributable to bundled contractual instruments in the DZ BANK Group in 2024. The DZ BANK Group does not use unbundled contractual instruments.

In total, 39 percent of the Scope 3 GHG emissions at the level of own operations (categories 1 to 14) were calculated using primary data. The drivers behind the 61 percent share of emissions calculated from secondary data are building renovations and tenanted real estate, both of which make a material contribution to total operational GHG emissions. No primary data about tenants' electricity consumption was collected as there is no legal basis for doing so. Estimates were used for building renovations of tenanted real estate, as the effort involved in collecting the primary data is disproportionate to the benefit.

The following figure presents the intensity of the total GHG emissions in tCO<sub>2</sub>eq in relation to the DZ BANK Group's net revenue. The net revenue used to calculate GHG intensity is based on the interest income and the fee and commission income in the income statement.

FIG. VII.20: INTENSITY OF GREENHOUSE GAS EMISSIONS IN RELATION TO NET REVENUE

|                                                                                | 2024   |
|--------------------------------------------------------------------------------|--------|
| Total GHG emissions (location-based) per net revenue (tCO <sub>2</sub> eq / €) | 0.0057 |
| Total GHG emissions (market-based) per net revenue (tCO <sub>2</sub> eq / €)   | 0.0057 |

GHG removals, projects aimed at reducing GHG emissions, and internal carbon pricing systems

The DZ BANK Group has no specific projects aimed at removing or storing greenhouse gas emissions relating to its own activities or to the upstream or downstream value chain. With the exception of BSH, the DZ BANK Group did not purchase any emission allowances in 2024. BSH purchased a very small volume of emission allowances in 2024, which it used for internal events with more than 100 attendees. This only applied to 5 events in 2024. The allowances are not factored into the GHG emissions calculation as carbon credits.

The DZ BANK Group does not use internal carbon pricing systems.

## 2.5 Mandatory disclosures for the DZ BANK banking group under the EU Taxonomy

### 2.5.1 Qualitative mandatory disclosures for the DZ BANK banking group under the EU Taxonomy

#### 2.5.1.1 Notes on the methodology

##### EU Taxonomy Regulation – current situation

The goal of the EU action plan for financing sustainable growth, published in March 2018, is to channel capital flows toward activities that are environmentally sustainable.

A common understanding of what counts as an environmentally sustainable activity is an essential part of this. Verifiable criteria that enable an activity to be classified as environmentally sustainable are also needed.

The EU Taxonomy Regulation, which came into force on January 1, 2022, sets out to achieve this by defining criteria to determine which economic activities qualify as environmentally sustainable and by specifying relevant disclosure requirements (in article 8).

The EU Taxonomy Regulation is centered around 6 environmental objectives, namely:

1. Climate change mitigation
2. Climate change adaptation
3. Sustainable use and protection of water and marine resources
4. Transition to a circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Each of the total of 6 environmental objectives is set out in more detail pursuant to articles 10 (3), 11 (3), 12 (2), 13 (2), 14 (2), and 15 (2) of the EU Taxonomy Regulation through technical screening criteria, which are dealt with in delegated acts. Since November 2023, technical screening criteria have been available for all 6 environmental objectives.

Rules specifying the table format must be followed for the mandatory quantitative disclosures relating to the green asset ratio. These rules are set out in detail in the EU Taxonomy Regulation and the related additional clarifications (in the form of frequently asked questions, FAQs).

The scope of this quantitative information is being progressively increased over a period of several years as part of a phase-in process set out by the EU. As at December 31, 2024, for example, disclosures on inflows compared with the previous year are required for the first time. The scope of the tables has also been significantly increased, with additional disclosures on economic activities in the areas of nuclear energy and gas required as at December 31, 2024.

##### Scope of mandatory and voluntary disclosures under the EU Taxonomy

DZ BANK's mandatory disclosures pursuant to the EU Taxonomy Regulation must be reported at the highest level of the scope of consolidation for regulatory purposes. For DZ BANK, this is the DZ BANK banking group, in which the R+V subgroup is accounted for under the equity method rather than as an insurance subsidiary. The information on the insurance and reinsurance activities performed by R+V, as defined by annexes IX and X of Delegated Regulation (EU) 2021/2178, are presented in R+V's group sustainability report.

The EU Taxonomy Regulation does not permit voluntary disclosures to be presented within the mandatory disclosures and, so far as they are made elsewhere, the two categories must be kept clearly separate. In the DZ BANK Group's sustainability report, the DZ BANK banking group only publishes mandatory disclosures under the EU Taxonomy, i.e. disclosures prepared within the narrowly defined methodology specified by the EU Taxonomy Regulation for entities subject to a reporting requirement.

The DZ BANK banking group must also publish disclosures under the EU Taxonomy in its regulatory risk report. Those disclosures may differ from the DZ BANK banking group's EU Taxonomy disclosures made here where there are differences in the stipulated methods.

**Explanatory notes on the structure of the assets in the mandatory disclosures relating to the green asset ratio (GAR)**  
The balance sheet structure for the results tables required by the EU Taxonomy Regulation is operationalized in accordance with the structure of the financial reporting requirements (FINREP) implemented in the DZ BANK banking group. Assets are shown at their gross carrying amounts. In line with the template rules, additionally required disclosures are presented in additional rows or columns. In some cases, additional disclosures are required in the form of 'of which' line items. The sum of these line items does not necessarily add up to the amount of the overall line item. This is the case for the disclosures relating to retail customers.

Within this balance sheet structure, the European Commission has introduced the term 'total GAR assets', which form the denominator in the GAR calculation.

Only some of the total GAR assets can be included in the numerator of the GAR, and only if they finance activities defined in the EU Taxonomy Regulation and the corresponding specific technical screening criteria are met. This predominantly comprises financing in respect of financial undertakings subject to the CSRD, non-financial undertakings subject to the CSRD, households, and local housing companies.

In contrast, assets such as central bank balances, the trading book, and exposures to central governments and supranationals are excluded entirely from the GAR calculation.

The rules in the EU Taxonomy Regulation on operationalizing the CSRD requirement stipulate that, in certain circumstances, counterparties that are not subject to the CSRD must be treated as if they are subject to the CSRD (i.e. they should be included in the numerator of the GAR) if they are part of a group structure in which the parent company is subject to the CSRD. There are similar rules in the context of special purpose vehicle (SPV) structures and certain bonds.

The CSRD requirement was operationalized through the NFRD requirement in 2024. This will change as counterparties' reporting switches from NFRD to CSRD.

#### Explanatory notes on the EU Taxonomy classification

Assets that can be included in the numerator of the GAR are classified in terms of their EU Taxonomy eligibility and alignment using the key performance indicator method (KPI method) or the individual transaction method.

In the KPI method, the use of funds for the asset is not specified in the agreement with the customer. Under this classification method, the asset is therefore classified pro rata in line with the customer's published EU Taxonomy eligibility and alignment KPIs.

The individual transaction method is used when the use of funds for the asset is specified. In this case, financed economic activities are assessed to ascertain whether they satisfy the EU Taxonomy Regulation's technical screening criteria for EU Taxonomy eligibility and/or alignment. If the criteria are satisfied in full and the minimum safeguards are adhered to, the asset is considered fully taxonomy-aligned. Adherence to the minimum safeguards does not have to be checked for retail real estate and is deemed to be a given.

In the case of finance for households where the use of funds is not specified (e.g. consumer finance), the finance is neither taxonomy-eligible nor taxonomy-aligned under the rules of the EU Taxonomy Regulation.

#### Notes on the reporting of inflows

According to the current interpretation of the EU Taxonomy Regulation, inflows from assets in the reporting year must be determined and disclosed in respect of new business.

The European Commission's FAQs dated November 8, 2024 eliminated the interpretation that inflows were calculated by deducting the volume as at the reporting date from the volume as at the prior-year reporting date.

#### 2.5.1.2 Explanatory notes on data sources and limitations

##### Explanatory notes on procuring business customers' EU Taxonomy KPIs

The DZ BANK banking group predominantly obtained business customers' EU Taxonomy KPIs from external data providers specializing in the procurement of such information. In some cases, the banking group supplemented the KPIs with data obtained by carrying out its own research.

EU Taxonomy KPIs were available only for non-financial undertakings in 2023, whereas EU Taxonomy KPIs are also available for financial undertakings subject to the CSRD from 2024 as their requirement to report the GAR came into effect on December 31, 2023.

The DZ BANK banking group did not use any estimates for business customers' EU Taxonomy KPIs.

##### Explanatory notes on the availability of energy performance certificates and similar documentation in real estate finance

Information taken from energy performance certificates and similar documentation is to be used to check the satisfaction of the technical screening criteria for EU Taxonomy eligibility and alignment in the real estate business.

Data coverage for energy performance certificates and similar documentation is being expanded in two ways: firstly, organically as a result of inflows and new business and, secondly, through targeted purchases for existing business. In the consumer business, purchases are made as part of a project coordinated within the Cooperative Financial Network.

### 2.5.1.3 Explanatory notes on the nature and objectives of EU Taxonomy-aligned economic activities in the DZ BANK banking group

<sup>1</sup> For credit institutions that do not meet the requirements of article 94 (1) or article 325a (1) of the Capital Requirements Regulation (CRR).

<sup>2</sup> Fee and commission income from services other than lending and AuM. Institutions shall disclose forward-looking information for this KPI, including information in terms of targets, together with relevant explanations on the methodology applied.

<sup>3</sup> Percentage of assets covered by the KPI over banks' total assets.

<sup>4</sup> Based on the revenue KPI of the counterparty.

<sup>5</sup> Based on the CapEx KPI of the counterparty, except for lending activities; the revenue KPI is used for general lending.

#### On balance sheet

The total assets of the DZ BANK banking group amounted to €543,008 million as at December 31, 2024.

The total GAR assets of the DZ BANK banking group amounted to €427,070 million as at December 31, 2024 (78.65 percent of total assets). Assets of €115,939 million (21.35 percent of total assets) are excluded from the GAR calculation entirely.

Assets of €252,403 million (46.48 percent of total assets) can only be included in the denominator of the GAR.

As at December 31, 2024, the GAR of the DZ BANK banking group stood at 0.66 percent (CapEx-based; December 31, 2023: 0.24 percent) and 0.50 percent (revenue-based; December 31, 2023: 0.15 percent).

The following 3 customer portfolios are contributors to the numerator of the DZ BANK banking group's GAR:

- Financial undertakings subject to the CSRD
- Non-financial undertakings subject to the CSRD
- Households

#### Off balance sheet

Under the rules of the EU Taxonomy Regulation, the volume of assets that the DZ BANK banking group had under management as at December 31, 2024 amounted to €102,032 million (December 31, 2023: €74,281 million).

As a rule, the EU Taxonomy assessment for assets under management is based on the KPI method. The GAR relating to these assets under management stood at 5.89 percent (CapEx-based; December 31, 2023: 5.98 percent) and 3.45 percent (revenue-based; December 31, 2023: 2.87 percent).

Under the rules of the EU Taxonomy Regulation, the financial guarantees that the DZ BANK banking group had issued as at December 31, 2024 amounted to €2,654 million (December 31, 2023: €2,028 million).

As a rule, the EU Taxonomy assessment for financial guarantees is based on the KPI method. The GAR relating to these financial guarantees stood at 9.47 percent (CapEx-based; December 31, 2023: 6.80 percent) and 5.90 percent (revenue-based; December 31, 2023: 2.54 percent).

#### Explanation of the methodology for the main KPI

- ‘% coverage (over total assets)’: The numerator of this disclosure comprises ‘GAR – Covered assets in both numerator and denominator’ in the table in chapter VII.5.1.1 (assets eligible for the numerator).
- ‘% of assets excluded from the numerator of the GAR (article 7 (2) and (3), and section 1.2.2 of annex V)’: The numerator of this disclosure comprises the difference between ‘Total GAR assets’ and ‘GAR – Covered assets in both numerator and denominator’ in the table in chapter VII. 5.1.1 (Denominator of the GAR – assets eligible for the numerator).
- ‘% of assets excluded from the denominator of the GAR (article 7 (1) and section 1.2.4 of annex V)’: The numerator of this disclosure comprises ‘Assets not included in the calculation of GAR’ in the table in chapter VII. 5.1.1 (Assets without impact on the GAR).

#### Explanation of the methodology for the KPI, GAR (inflows)

- ‘% coverage (over total assets)’: The numerator of this disclosure comprises the inflows in the reporting year within ‘GAR – Covered assets in both numerator and denominator’ in the table in chapter VII. 5.1.1 (Inflows of assets eligible for the numerator).
- ‘% of assets excluded from the numerator of the GAR (article 7 (2) and (3), and section 1.2.2 of annex V)’: The numerator of this disclosure comprises the difference between ‘Total GAR assets’ and the inflows in the reporting year within ‘GAR – Covered assets in both numerator and denominator’ in the table in chapter VII. 5.1.1 (Denominator of the GAR – inflows of assets eligible for the numerator).
- ‘% of assets excluded from the denominator of the GAR (article 7 (1) and section 1.2.4 of annex V)’: The numerator of this disclosure comprises ‘Assets not included in the calculation of GAR’ in the table in chapter VII.5.1.1 (Assets without impact on the GAR).

#### 2.5.1.4 Compliance with Regulation (EU) 2020/852 in the financial undertaking’s business strategy, product design processes, and engagement with customers and counterparties

DZ BANK sees itself as a supporter of the transformation of the real economy, helping with the transition to a more sustainable business model. In doing so, it wishes to seize additional business opportunities arising from high demand for financing and investment solutions (for example, to finance the transition to EU Taxonomy-aligned business). An increase in EU Taxonomy-aligned business would help to achieve various ESG goals that DZ BANK has set itself in its business strategy (such as its growth target for renewable energies financing).

Furthermore, DZ BANK is currently developing a classification approach for sustainability products in the form of a sustainability product framework. A business partner's compliance with statutory standards – for example the EU Taxonomy requirements, but also globally recognized criteria of the International Capital Market Association (ICMA) and the Loan Market Association (LMA) for green, social, and ESG-linked products – is likely to be one of the criteria for assessing a product's sustainability.

The exploratory phase of the classification approach for sustainability products in the lending business is currently under way. It is due to be finalized and integrated with sales processes in 2025.

#### 2.5.1.5 Significance of the financing of taxonomy-aligned economic activities within the DZ BANK banking group's overall activity

The EU taxonomy is one of a total of 5 relevant sources of requirements that form the basis of the target vision for the sustainability classification at the level of DZ BANK.

Technical implementation of the target vision began with the 'SDG classification' source of requirements. Carbon accounting and climate alignment were introduced for relevant sectors in 2023.

With regard to the 'EU Taxonomy classification' source of requirements, the DZ BANK banking group started by implementing the requirements of the EU Taxonomy Regulation and the processes for determining the relevant metrics. As stipulated, a green asset ratio based on a granular analysis of individual financed activities has been calculated annually since December 31, 2023; the ratio is disclosed in the sustainability reporting for 2024. An internal analysis of the extent to which economic activities that are aligned with the requirements of the EU Taxonomy are to be financed by the DZ BANK banking group in the future, potentially in a targeted manner, will not be conducted until a later date.

#### 2.5.2 Quantitative mandatory disclosures for the DZ BANK banking group under the EU Taxonomy

The detailed mandatory quantitative disclosures for the DZ BANK banking group under the EU Taxonomy can be found in chapter VII.5 Annex.

### 3 Social matters

The success of the DZ BANK Group depends on its employees being dedicated and well qualified for their jobs. The DZ BANK Group therefore puts a great deal of emphasis on doing everything it can to develop its employees and support them in their work. It also considers the interests of workers in the value chain, of affected communities, and of customers as consumers and end-users to be a priority. As an employer and financial services provider, it also recognizes its responsibility to society and has implemented numerous policies, actions, and targets in order to fulfill this role.

#### 3.1 Management of material impacts, risks, and opportunities in the social sphere (SBM-3)

The **workers** in the DZ BANK Group affected by material impacts, risks, and opportunities comprise employees and external workers. The DZ BANK Group defines employees as anyone with an active employment contract, including at all management levels. This includes those who are in the active phase of semi-retirement (Altersteilzeit) as well as young people undergoing training, such as trainees, students pursuing combined work and degree courses, and apprentices. Governing bodies, such as the Board of Managing Directors and director-generals, are not included. External workers consist of self-employed people and people provided by third-party companies primarily engaged in employment activities.

Against the backdrop of competition for specialist and managerial staff, the DZ BANK Group offers working conditions designed to attract and retain well-qualified specialists and young people (see chapter VII.3.2.1). Fair and transparent remuneration systems, measures to improve work-life balance, and preventive health programs are designed to have a positive impact on employees' motivation and, at the same time, provide an incentive for potential applicants.

The DZ BANK Group aims to minimize negative impacts, such as increased sick leave and absenteeism due to unsuitable working conditions. It has put suitable processes and channels in place to counter these, such as complaints management, employee surveys, and physical and mental health risk assessments (see chapter VII.3.2.3). At the same time, it wants to boost motivation and performance by continuously improving working conditions. The entities in the DZ BANK Group offer a wide range of health management services that help to maintain their employees' performance levels (see chapter VII.3.2.5).

The reputational risk of damage to stakeholder trust may arise due to insufficient standards for safeguarding employees' human rights in the context of inadequate occupational health and safety and changes to the work culture, and due to unequal treatment. BSH, DZ BANK, R+V, and TeamBank carry out regular risk analyses within the scope of LkSG and examine the risks and any potential violations of their employees' human rights. These include treating employees differently, not paying an adequate wage, and disregarding occupational health and safety (see chapter VII.3.2.6). The DZ BANK Group has signed the Diversity Charter and takes action such as providing training on the German General Equal Treatment Act (AGG) and similar national protective provisions in order to champion the equal treatment of employees and foster an inclusive work environment. For certain groups of people who could be particularly affected by, or at risk of, differential treatment, a separate group inclusion agreement has been put in place in order to counter discrimination (see chapter VII.3.2.3). This has a positive impact on commitment, staff turnover, and the number of applicants.

The entities in the DZ BANK Group prevent the existence of and support for discrimination or material negative impacts within its own workforce by taking their own action: Various channels are used to raise workers' awareness of diversity and inclusion, such as holding events and training courses, supporting employee networks, encouraging cultural exchange by arranging secondments, and actively seeking out workers' perspectives on diversity and inclusion by running employee surveys and topic-based internal communications campaigns.

At DZ BANK, workers do not carry out any tasks where there is a significant risk of incidents of forced labor, human trafficking, or child labor in terms of the type of work or geographical area.

As explained in chapter VII.2.2.1, there is no transition plan for own operations. Therefore, there are no material impacts on the DZ BANK Group's workforce that could arise from transition plans.

The entities in the DZ BANK Group each provide the financial resources – in the form of dedicated budgets – for managing and implementing the individual actions related to the workforce.

With regard to **workers in the downstream value chain**, the DZ BANK Group hopes that it has positive impacts on affected communities because the loans that it provides facilitate investments that can create jobs and reduce unemployment. Suitable exclusion criteria in the lending process help to counter possible reputational risk in the business portfolio, for example resulting from violations of human rights. DZ BANK estimates the remaining social risks by deploying selected instruments (see chapter VII.3.3).

In accordance with the guiding principle of fulfilling the role of a network-oriented central institution and financial services group, the business activities of the DZ BANK Group are concentrated in its core market of Germany. Clearly defined and monitored groupwide country limits apply to activities outside this business territory. Investments in countries with a heightened risk of child labor or forced labor are therefore not of relevance to the DZ BANK Group. The use of exclusion criteria in investment decisions is designed to ensure that the DZ BANK Group does not invest in companies that have a heightened risk of child labor or forced labor.

The entities in the DZ BANK Group each provide the financial resources – in the form of dedicated budgets – for managing and implementing the individual actions related to the workers in the value chain.

With regard to **affected communities**, the DZ BANK Group helps local communities by supporting charitable projects and social initiatives, and by providing jobs and training for the regional population (see chapter VII.3.4). Negative impacts linked to the DZ BANK Group's activities may arise, for example, from the financing of projects that affect the living conditions and/or circumstances of local communities. Reputational risks may arise from questionable dealings with other ethnic groups, from business relationships or business partners that fail to protect cultural assets and traditions, or from questionable dealings with local communities. The DZ BANK Group addresses these risks by taking standards into account in its lending decisions (see chapter VII.3.4).

The entities in the DZ BANK Group each provide the financial resources – in the form of dedicated budgets and donations to social and cultural causes – for managing and implementing the individual actions related to affected communities.

The DZ BANK Group believes that **satisfied customers** are key to establishing and maintaining long-term business relationships and thus to the future viability of the DZ BANK Group. Focusing on the needs of customers is therefore the responsibility of all employees, with progress regularly measured on the basis of customer satisfaction.

The financial services providers make a distinction between securities investors, policyholders, consumer finance borrowers, real estate finance borrowers, and home savings customers with the aim of ensuring that consumers and end-users across all customer segments are guaranteed equal access to financial products and insurance. The entities in the DZ BANK Group use a variety of concepts to ensure service quality and to record and process customer complaints. How these concepts are designed in detail depends on the specific business models and activities of the individual entities and their sometimes different target groups (see chapter VII.3.5).

The aim is for consumers and end-users to benefit from the provision and communication of information. Tapping into new markets and customer groups, and offering financial products tailored to customer requirements, presents opportunities for customers. Compliance with general privacy laws is a priority in order to protect customers. Data protection and information security are governed by groupwide policies (see chapter VII.3.5).

Reputational risk may arise from the way that customer relationships are managed and in connection with the DZ BANK Group's own products. From the perspective of the DZ BANK Group, stakeholders' trust may be damaged if public perception shifts due to the way that product liability is handled, where product safety assurances are considered insufficient, or as a result of uncertainty regarding consumer protection (including data protection). To avoid this, the DZ BANK Group has formulated requirements for product governance and thus sets fundamental quality standards for business involving financial instruments (see chapter VII.3.5).

The entities in the DZ BANK Group each provide the financial resources – in the form of dedicated budgets – for managing and implementing the individual actions related to consumers and end-users.

As part of the business environment analyses, socially relevant risk factors were analyzed and their impacts on the business model of each management unit were assessed. The business environment analyses showed that there are mainly short-term operational risks with regard to the social sphere. These risks may arise due to inadequate health and safety regulations, and a lack of data security in relation to the workforce. The analysis of the DZ BANK Group's business model showed that it is only marginally affected over a short time horizon, as the statutory provisions in this area are, to the best of the DZ BANK Group's knowledge, fulfilled. With regard to the DZ BANK Group's customer groups, the analyses found that product liability and product safety, including consumer protection, are assured through policies and are only marginally affected over a short time horizon. In addition, short-term reputational risks were that could potentially have a negative impact (moderate effect) on the DZ BANK Group's business model. The ongoing improvement of working conditions presents opportunities to boost employee motivation and performance, with positive impacts on health and absenteeism, and thus on the DZ BANK Group's business model.

As part of the DZ BANK Group's materiality assessment (see chapter VII.1.5), the impacts, risks, and opportunities (IROs) were identified in the social sphere that are material for the DZ BANK Group in relation to its own workforce, workers in the value chain (in the business portfolio), affected communities (in own operations and the business portfolio), and consumers and end-users (in the business portfolio).

FIG. VII.22: OVERVIEW OF THE IMPACTS, RISKS, AND OPPORTUNITIES IN THE SOCIAL SPHERE

| Topics of the materiality assessment | Standard | Dimension      | IRO type        | Impacts, risks, and opportunities                                                                                                  | Chapter in the report                                                                                                                              |

|                                      |          |                    | Risk            | Reputational risk in the business portfolio: Damage to stakeholders' trust in DZ BANK Group entities due to links to business partners with poor stakeholder management, or whose treatment of workers in the value chain in the supplier portfolio is of concern (i) due to a disregard for health and safety, (ii) due to questionable working conditions or insufficient protection of employee data, (iii) due to violations of human rights, or (iv) in connection with changes in the work culture. For example, the public, the media, and/or employees could criticize violations of human rights – whether subjective or not – by the institution. Stakeholders could criticize the non-implementation, or incorrect implementation, of external requirements relating to labor law or human rights, notably breaches of work standards or inadequate health and safety provisions for employees. |                                      |

|                                      |          |                    | Positive impact | Keeping customers informed by offering high-quality advice and fulfilling the duty to inform, explain, and clarify                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                |
|                                      |          |                    | Opportunity     | Long-term success through customer-centricity and the resulting customer satisfaction (expressed in the Net Promoter Score, where applicable)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                |
|                                      |          |                    | Opportunity     | Tapping into new markets and customer groups, and expanding existing business segments by offering financial/insurance products tailored to customer requirements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                |
|                                      |          |                    | Risk            | Own operations-related reputational risk: Damage to stakeholders' trust in DZ BANK Group entities due to the way that customer relationships are managed and in connection with the group's products, if public perception shifts due to the way that product liability is handled, where product safety assurances are considered insufficient, or as a result of uncertainty regarding consumer protection (including data protection). For example, the general public, the media, and/or sales partners could express concerns about products that are not sustainable, or sales partners and/or retail customers could criticize hard selling by local agents during advisory consultations or on conclusion of contracts. |                                |
|                                      |          |                    | Risk            | Own operations-related reputational risk: Damage to stakeholders' trust in DZ BANK Group entities due to poor stakeholder management                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                |

## 3.2 Employees

### Brief summary

- Reporting of targets, policies, actions, processes, and metrics relating to employees
- Explanation of HR-strategy-related activities in connection with employees
- Support for employees' professional skills and career opportunities through training and continuing professional development (CPD)
- Information on the integration of diversity and inclusivity, fostering of equal opportunities, and work-life balance support
- Description of the processes and structures for employee remuneration, promotion of financial security and wellbeing through employee benefits, and employees' active involvement in decision-making processes and corporate development
- Integration of physical and mental healthcare and of occupational health and safety in the workplace
- Reporting on respect for and compliance with human rights of the DZ BANK Group's own workforce

The entities in the DZ BANK Group strive to be a responsible employer and to offer their employees a safe workplace and attractive prospects for individual development. This section outlines the structure of the workforce, including the age distribution, and explains how adequate remuneration contributes to satisfaction and motivation. It also presents the actions taken to promote diversity and an inclusive working environment. The DZ BANK Group entities place a high value on training and continuing professional development to ensure their employees have the skills they need. Occupational health and safety is key to supporting a sense of well-being in the workplace. At the end of each chapter, the metrics for employees showcase the progress made and the challenges in these areas.

### 3.2.1 HR strategy (S1-1, S1-2, S1-3, S1-4, S1-5, S1-6)

#### Targets relating to the HR strategy

No common, measurable, and outcome-oriented target value, such as an Organizational Commitment Index (OCI) score, is currently in use for the whole DZ BANK Group.

On the basis of a resolution of the Board of Managing Directors, DZ BANK and VR Smart Finanz have each set themselves an ongoing target of permanently maintaining their **Organizational Commitment Index (OCI)** score – used to measure employee satisfaction – at 70 or above. BSH aims to keep its OCI score at 75.

As part of the individual employee surveys, the OCI score for BSH, DZ BANK, DZ HYP, DZ PRIVATBANK, TeamBank, Reisebank, UMH, VR Smart Finanz, and VR Factoring GmbH is determined using 5 standardized questions on the following aspects: overall satisfaction, likelihood of recommending the entity as an employer, re-entering work, personal commitment, and competitiveness. Depending on the entity, the surveys are conducted every one to 3 years. A survey on employee satisfaction was carried out at VR Equitypartner for the first time in 2023. The aim is to introduce a standardized measure of satisfaction using an OCI in future surveys.

In 2024, the OCI score for DZ BANK and BSH was 82, and for DZ PRIVATBANK 77. VR Factoring GmbH had an OCI score of 70, Reisebank of 76, TeamBank of 81, and VR Smart Finanz of 78. DZ HYP and UMH last determined their scores in 2023. One sign of employees' strong commitment is the number of them who would recommend their company as an employer. At DZ BANK, for example, 25 percent of hires in 2024 originated from employees' personal recommendations.

Recording the OCI contributes to the HR strategy of each DZ BANK Group entity of positioning itself as a responsible employer that offers a healthy and safe working environment and attractive opportunities for continuing professional development. At DZ BANK and UMH, this goal is monitored by Group Human Resources in the context of Board of Managing Directors meetings. VR Smart Finanz manages the OCI as a metric through its HR and Compliance department.

In the context of implementing the DZ BANK Group's HR strategy, TeamBank aims to foster employee satisfaction and measure it using its own **engagement index** as part of the annual employee survey. The target score for 2024 was 73 and the actual score was 71.

These targets are directly linked to the material topics of working conditions, equal treatment / non-discrimination, and other labor rights, plus the related IROs. These metrics are not validated by an external body.

#### Policies relating to the HR strategy

All HR-strategy-related activities are based on the business and HR strategies of the Cooperative Financial Network and the DZ BANK Group, and their aim is to further develop the group as a financial services provider. The existing groupwide policies, actions, and targets relating to employees apply to the entities in the Group HR Committee (GHRC), which comprises the main management units of the DZ BANK Group.

At the German sites of the DZ BANK Group's management units, and in accordance with the German Works Constitution Act (BetrVG), **company agreements** of varying scope cover the key matters where workers have participation rights, such as CPD (see chapter VII.3.2.2), working hours and work location (see chapter VII.3.2.3), remuneration (see chapter VII.3.2.4), and health (chapter VII. 3.2.5). The company agreements and similar internal regulations in the management units lay down guidelines that meet the commercial and technical requirements of the business and the professional requirements of employees in equal measure. They apply either to all group entities (groupwide agreements) or all operations of one entity (company-wide agreements), or only to individual sites (local company agreements). To facilitate the implementation of HR-strategy-related decisions in the DZ BANK Group, a common remuneration strategy (see chapter VII.3.2.4) and, across most of the DZ BANK Group, an employer branding strategy and an HR strategy have been put in place. The latter applies to employees and potential applicants. These were signed off by the highest decision-making and coordinating committee.

The **HR strategy** is built on 10 pillars: recruitment and employee retention, modern working and flexibility, leadership, digitalization, social responsibility, strategic HR planning, talent and succession management, cost and resource management, HR-relevant regulatory and statutory requirements, and collaboration with workers' representatives. Decisions regarding HR strategy in the DZ BANK Group's management units are made by the members of the Boards of Managing Directors responsible for HR on the GHRC (see chapter VII.1.3). The HR managers of the management units meet four to six times a year in the HR managers' committee to share their experiences.

An **employer branding strategy** has been adopted to ensure that the group remains an attractive and competitive employer. Its purpose is to position the DZ BANK Group's main management units as employers, recruit and retain the right employees over the long term, and safeguard the group's future viability. The strategy's content and action plan are regularly monitored by the GHRC, which meets twice a year.

The DZ BANK Group must protect its data in accordance with the statutory requirements. The **data protection standards** of the DZ BANK Group apply to all group entities and reflect the data protection principles enshrined in article 5 of the General Data Protection Regulation (GDPR): lawfulness, fairness, and transparency; purpose limitation; data minimization; accuracy; storage limitation; integrity and confidentiality. Where mandatory under data protection requirements, all group entities have appointed data protection officers who are responsible for the organizational aspects of data protection. These data protection officers are not bound by instructions regarding the exercise of their tasks, in line with the requirements of the GDPR. They are a point of contact for employees when needed.

These policies are directly linked to the material topics of working conditions, equal treatment and non-discrimination, and other labor rights, plus the related IROs.

#### Actions relating to the HR strategy

HR marketing actions include ongoing **communication measures** and campaigns in the form of advertising that are used to implement the HR strategy and position the employer brand in the external labor market. For example, an advertising campaign on social media platform TikTok was launched in 2023 in order to reach Generation Z and attract young talent. It is also used for recruitment purposes. The **careers website** ([www.karriere.dzbankgruppe.de](http://www.karriere.dzbankgruppe.de)) offers applicants the latest information about the individual entities and access to their respective job boards. The jobs on offer cover all areas of banking and financial services, are listed by entity, and are targeted at school leavers, students, career starters, and experienced professionals. The careers website supports the implementation of the employer branding strategy and aims to attract young talent and professionals as potential applicants.

The implementation of the employer branding strategy and the actions for attracting employees are supported by the intragroup initiative '**Employees recruit employees and young talent**'. DZ BANK Group employees

can help the DZ BANK Group entities with recruitment by recommending potential candidates from their personal networks for vacant positions in the group. If a new recruit is hired based on such a referral, the employee who made the recommendation is awarded a cash bonus of €1,000 gross. The DZ BANK Group's management units participate in this program on an ongoing basis to attract young talent and professionals.

Also part of the HR strategy are **career scouts**, who advise employees on career opportunities in the DZ BANK Group's management units. The annual, groupwide virtual **career scout talk** was offered again in 2024. Like the annual **career scout day**, the career scout talks promote an understanding among all group employees of the particular features of other group entities, encourage a greater depth of professional dialogue, and aim to strengthen employee loyalty. This action supports the implementation of the HR strategy.

The employees in all group entities receive regular mandatory training on current data protection law, with the aim of enshrining the principles of data protection and ensuring compliance with statutory data protection requirements. This also applies to people who have access to employees' personal data owing to their role (e.g. in HR departments) and to managers. DZ PRIVATBANK, Reisebank, TeamBank, VR Smart Finanz, and VR Payment all provide **mandatory data protection training** for all employees annually. These mandatory training sessions are provided every 2 years at BSH, DZ BANK, UMH, R+V, VR Equitypartner, and VR Factoring GmbH. DZ HYP requires its employees to take part in an online data protection training course when they join the company, and every 2 years thereafter.

#### Processes and channels relating to employees

The DZ BANK Group entities use a wide range of channels to canvass the views of their workforce and factor them into decisions and activities. **Employee surveys** are generally carried out every one to 3 years and use standardized questions to establish employee satisfaction and loyalty, among other things.

DZ BANK carries out the **PulsCheck employee survey** ('pulse check') every year. It includes questions on strategy, culture, and satisfaction, plus additional focus topics. Sustainability and diversity, for example, were added as topics in 2021 and 2022 respectively with the aim of monitoring awareness, approaches, and activities. The survey results are published on the intranet in aggregated form and communicated by managers to their departments. Furthermore, a survey on leadership is carried out every two years that allows employees to give their line manager feedback via an anonymous, standardized questionnaire.

DZ PRIVATBANK conducts an employee survey every two years and also obtains feedback on managers. It is collected every 3 months in the context of information from the Board of Managing Directors and during events for new employees. At TeamBank, feedback on managers is collected as part of the annual pulse check. In addition to the regular employee survey, R+V and VR Equitypartner obtain further employee feedback via ad hoc pulse checks. VR Payment also carries out its own internal employee surveys, plus additional pulse checks that are conducted every six weeks and look at respect, stress levels, and motivation. Individual departments also carry out pulse checks at three-month intervals regarding agile values, agile principles, and agile working methods. VR Smart Finanz conducts an annual employee survey and carries out pulse checks throughout the year to monitor employee satisfaction and motivation levels and ascertain how employees view the workload. UMH also carries out ad hoc surveys on specific topics, as well as regular surveys of all employees on managerial style and corporate culture.

#### Metrics relating to the HR strategy

The entities in the DZ BANK Group employed a total of 38,199 employees as at the reporting date (see Fig. VII.23).

Fig. VII.23 shows the number of employees in the DZ BANK Group in the reporting year as at the reporting date. The data was presented as a headcount. The average number of employees during the reporting year was determined by adding up the number of people at the end of each month and dividing the total by 12.

The average number of employees can be found in note 105 (employees) in the consolidated financial statements.

FIG. VII.23: NUMBER OF EMPLOYEES IN THE DZ BANK GROUP, BY GENDER (AS AT DECEMBER 31)

| Gender       | Number of employees |
|--------------|---------------------|
| Male         | 21,028              |
| Female       | 17,171              |
| Non-binary   | -                   |
| <b>Total</b> | <b>38,199</b>       |

Fig. VII.24 lists the DZ BANK Group sites with 50 or more employees and representing at least 10 percent of the total number of employees. This data is based on the country in which an employee is employed. The number of employees by site was determined as at the reporting date and reported as a headcount.

FIG. VII.24: NUMBER OF EMPLOYEES IN THE DZ BANK GROUP, BY COUNTRY (AS AT DECEMBER 31)

| Country | 2024   |
|---------|--------|
| Germany | 35,729 |

Of the total of 38,199 employees in the reporting year, 94.3 percent had a permanent employment contract and 5.7 percent had a temporary employment contract. One employee available on-demand worked in the DZ BANK Group entities in 2024. Full-time employment equates to 100 percent of the agreed (collectively negotiated) number of full-time working hours (regardless of whether a 35-hour, 37-hour, or 42-hour work has been agreed, for example). If the number of hours worked is different from the agreed (collectively negotiated) number of full-time working hours, this constitutes part-time employment.

Fig. VII.25 shows the number of employees by contract type and gender as at the reporting date and reported as a headcount. The contract types are split into temporary employees, permanent employees, and employees available on demand. The headcount is also split into full-time and part-time employees.

FIG. VII.25: NUMBER OF EMPLOYEES IN THE DZ BANK GROUP, BY CONTRACT TYPE AND GENDER (AS AT DECEMBER 31)

|                               | Female | Male   | Non-binary | Total  |
|-------------------------------|--------|--------|------------|--------|
| Employees                     | 17,171 | 21,028 | -          | 38,199 |
| Permanent employees           | 16,156 | 19,858 | -          | 36,014 |
| Temporary employees           | 1,015  | 1,169  | -          | 2,184  |
| Employees available on demand | -      | 1      | -          | 1      |
| Full-time employees           | 10,646 | 19,692 | -          | 30,338 |
| Part-time employees           | 6,525  | 1,336  | -          | 7,861  |

Fig. VII.26 shows the number of employees in the DZ BANK Group by contract type and country. The DZ BANK Group sites with 50 or more employees, and representing at least 10 percent of the total number of employees, are located in Germany.

FIG. VII.26: NUMBER OF EMPLOYEES IN THE DZ BANK GROUP, BY CONTRACT TYPE AND COUNTRY (AS AT DECEMBER 31)

|                               | Germany |
|-------------------------------|---------|
| Employees                     | 35,729  |
| Permanent employees           | 33,640  |
| Temporary employees           | 2,088   |
| Employees available on demand | 1       |
| Full-time employees           | 28,391  |
| Part-time employees           | 7,338   |

Staff turnover in the DZ BANK Group was 7.0 percent in 2024. To calculate this, the total number of leavers due to dismissal by the employer, termination by the employee, termination by mutual consent, end of contract, age (retirement, early retirement), permanent or temporary incapacity to work, or death was determined for the reporting year and divided by the average number of employees during the reporting year.

#### Metrics relating to employees

No cases of non-respect of the UN Guiding Principles on Business and Human Rights, the Declaration of the International Labour Organization (ILO) on Fundamental Principles and Rights at Work, or the OECD Guidelines for Multinational Enterprises that involve employees were reported during the reporting period.

### 3.2.2 Employee development (S1-1, S1-4, S1-5, S1-13)

#### Targets relating to employee development

To date, no measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to training and CPD for employees.

#### Policies relating to employee development

CPD enables employees to regularly and systematically maintain, adapt, and expand their skills in a changing working environment. It also helps to safeguard and develop employees' career prospects, integrate employees after career breaks (e.g. parental leave, volunteering), and manage technical and organizational changes in the group entities. All group entities have put in place defined processes and **policies for employee development and training**. The individual entities have set out the related parameters either in company agreements or similar internal regulations, which all employees are familiar with and have access to.

**Company agreements on continuing professional development** are in place at DZ BANK and TeamBank. These safeguard and develop the career prospects of employees, and support the integration of employees after career breaks and the technical and organizational transformation of the respective group entity. The company agreements on continuing professional development aim to ensure that training meets the commercial and technical needs of the entity and the professional interests of the employees. BSH and UMH also have **management guidelines** in place that promote CPD and individual skills training for employees. The implementation of the company agreements is the responsibility of the Board of Managing Directors of each group entity, and is monitored by the respective HR divisions and workers' representatives.

These policies are directly linked to the material topic of equal treatment / non-discrimination, plus the related IROs.

#### Actions relating to employee development

In the course of implementing the company agreements or similar regulations on continuing professional development, most of the entities in the DZ BANK Group support high-potential employees and managers with a range of development measures on an ongoing basis. Systematic talent management is designed to prepare

employees for taking on demanding tasks. Key activities for implementing the actions within the group entities involve regular reminders of the formats in order to boost take-up.

The **Corporate Campus** brings together the latest material training and professional development offerings for managers in the DZ BANK Group. Since 2021, the two target groups – the 200 or so senior managers of the DZ BANK Group and the 600 or so managers at DZ BANK – have been able to access a variety of learning and discussion events under the banner ‘leading, connecting, developing’.

Irrespective of their gender or job profile, all employees and managers at the German sites in most of the DZ BANK Group entities are entitled to structured feedback and/or a development meeting with their direct line manager every year. The assessment criteria for **performance and career development reviews**, including relevant guidelines, are known to all participants and managed by the respective HR departments. The reviews, which should be documented by employees and line managers together, boost motivation by setting attainable targets, for example, and provide a platform for meaningful dialogue between employees and line managers.

Under the annual **reverse mentoring program** of DZ BANK and R+V, managers pair up with young employees to learn more about Generation Z and about using social media, digital platforms, and collaborative tools.

DZ BANK’s annual **development program for high-potential employees (PFP+)** facilitates both vertical and horizontal development paths, encourages participants to spend time in different parts of the business, and establishes alternatives to the conventional management career path. BSH generally offers annual **staff development programs** for young professionals, future managers, newly promoted managers, and heads of department.

In the reporting year, VR Smart Finanz implemented two **career programs** ‘Führungspotenzial’ (management potential) and ‘Fachkarriere’ (specialist career) designed to nurture employees’ potential. The career programs are offered as ongoing CPD options.

In 2024, TeamBank began supporting its employees’ personal development using a **feedback format in which employees can review the year**. The annual review is a tool for assessing the skills of employees and managers. The assessment covers professional and personal aspects. Work-related feedback between line manager and employee, as well as between employees, can also be given at any time in a face-to-face meeting.

TeamBank also runs an ongoing **workshop format** for its employees’ personal and professional development entitled ‘Spotlight Du’ (putting you in the spotlight). The format focuses on examining employees’ strengths and values in order to support their career development and is offered as a two-day workshop or as an ongoing course of two-hour development dialogues.

TeamBank established a **reflections box** in 2022. It allows employees to reflect independently (or with the support of a mentor) on their development or on challenges at work on an ongoing basis, and is open to all employees.

In 2023, BSH adopted a new **HR management strategy**, which also contributes to employee development. Among other things, it specifically shines a light on opportunities for development. Existing CPD programs were revised and refined, for example through best-practice development paths, which were communicated via the intranet in 2024.

In addition to the offerings of the Corporate Campus, R+V launched regular **Leadership Camps** in 2022 that every manager at R+V – from the Board of Managing Directors to the heads of group in the inhouse and field sales forces – attends in order to support R+V’s transformation and further entrench a progressive culture of

leadership and collaboration. The Leadership Camps support the implementation of leadership and collaboration principles at R+V.

In addition to the Corporate Campus, DZ PRIVATBANK supports the development of future managers through the annual **manager development program**. Under this program, young managers and high-potential employees acquire the knowledge that they will need to meet the requirements that will be faced by the managers of the future.

To ensure compliance with policies, actions in the context of CPD include the **internal training and development opportunities** that all entities in the DZ BANK Group offer to their employees. CPD activities are offered on an ongoing basis. To ensure that all individual training targets defined in accordance with the needs of the entities and the focus of their HR strategies can be achieved, all group entities offer CPD to all employee groups and keep a record of the number of CPD days for all their employees. In most cases, the training courses are routinely selected according to departmental requirements and evaluated, which includes looking at participants' feedback. In most of the group entities, the findings are communicated via the HR departments to the relevant Boards of Managing Directors and disclosed as an aggregated metric (number of employees who would recommend taking part) in HR reports and the human resources report.

The **video-based learning platform Masterplan** helps employees to keep on improving their digital skills. The platform is used by most of the banking group and, from the perspective of the aforementioned group entities, caters to the general trend for needs-based learning. DZ BANK employees in Germany and internationally can choose between voluntary courses offered as part of the inhouse CPD program, division-specific training, and individual external courses. In addition, DZ BANK Group employees can take part in classroom-based training from DZ BANK's internal CPD program (open program).

DZ BANK uses an **online survey to gather feedback** on internal training. The number of employees who would recommend taking part is very high at over 90 percent.

All management units also support employees' **continuing professional development outside of working hours**.

#### Metrics relating to employee development

In the reporting year, 69.0 percent of employees in the DZ BANK Group's management units took part in an annual performance and career development review. To calculate the percentage, the number of employees who took part in a regular performance and career review during the reporting year was divided by the average number of employees during the reporting year.

The average number of training hours per employee was 28.4 in 2024. This figure was calculated by dividing the employees' total training hours by the average number of employees during the year. The training data relevant to the training hours statistics includes the proportion of internal training that supports the continuing professional development of the DZ BANK Group's workforce to ensure the future viability of the group. This refers to training through which employees are reskilled and/or acquire new knowledge and abilities so that they can perform a different job in the company. It also refers to training through which knowledge and abilities in specific areas are upgraded using new technologies and approaches (upskilling). The training delivered as part of the company's skills retention activities (such as language training, leadership and management development) was also factored in. Furthermore, both time-specific training (e.g. internal or external classroom-based training) and non-time-specific training (e.g. learning platform content, e-learning) were included. The number of minutes documented in the system is used to measure training time, though this may differ from the actual time spent on training. All training completed in 2024 up to the reporting date was included in the calculation, with the exception of mandatory training courses, which were excluded. Further-

more, vocational education and training and similar full-time programs were not included as continuing professional development. We make use of the phase-in option with regard to the requirement to provide a gender breakdown.

### 3.2.3 Diversity, equal opportunities, and work-life balance (S1-1, S1-4, S1-5, S1-9, S1-12, S1-15)

#### Targets relating to diversity

The diversity target for most of the entities in the DZ BANK Group is to increase the **proportion of women at Board of Managing Directors level** to 30 percent by 2030 and maintain it at that level. This target supports the implementation of the DZ BANK Group's HR strategy.

In addition, the **German Act on the Equal Participation of Women and Men in Leadership Positions in the Private and Public Sectors (FüPoG)**<sup>26</sup> requires companies with more than 500 employees to set binding targets for the supervisory board, the board of managing directors, and the first and second levels of management (heads of division and heads of department) and to publish these targets in the management report. The act applies to most of the management units. In this context, increasing the proportion of women at the management levels and on the Boards of Managing Directors and Supervisory Boards has been defined as a target in connection with the implementation of the Second Act on the Equal Participation of Women and Men in Leadership Positions in the Private and Public Sectors (FüPoG II)<sup>27</sup>.

Fig. VII.27 below shows the **target values** by entity for the **Supervisory Board and the Board of Managing Directors** in accordance with the requirements of FüPoG II. VR Equitypartner, VR Factoring GmbH, and VR Payment are not included as they do not fall within the scope of FüPoG II.

<sup>26</sup> In the version of the official announcement on April 30, 2015 (BGBl. I p. 642), effective date May 1, 2015.

<sup>27</sup> In the version of the official announcement on August 11, 2021 (BGBl. I p. 3311), effective date August 12, 2021.

FIG. VII.27: TARGET VALUES BY ENTITY FOR THE PROPORTION OF WOMEN ON THE SUPERVISORY BOARD AND THE BOARD OF MANAGING DIRECTORS IN ACCORDANCE WITH FÜPOG II

| Group entity                                   | Supervisory Board Target | Board of Managing Directors Target |

| R+V Allgemeine Versicherung AG                 | 18,8%<br>(30.06.2027)    | 20,0%<br>(30.06.2027)              |
| R+V Lebensversicherung AG                      | 25,0%<br>(30.06.2027)    | 40,0%<br>(30.06.2027)              |
| TeamBank                                       | 16,0%<br>(30.06.2025)    | 25,0%<br>(30.06.2025)              |
| Union Asset Management Holding AG <sup>2</sup> | 26,7%<br>(31.12.2026)    | 20,0%<br>(31.12.2026)              |
| Union Investment Privatfonds GmbH              | 16,6%<br>(31.12.2026)    | 0,0%<br>(31.12.2026) <sup>3</sup>  |
| VR Smart Finanz <sup>1</sup>                   | 20,0%<br>(31.12.2024)    | 50,0%<br>(31.12.2024)              |

<sup>1</sup> Does not fall within the scope of FÜPoG I and II, but voluntary target values defined.

<sup>2</sup> Going beyond FÜPoG, UMH included a target in its diversity & inclusion strategy to increase the proportion of women in leadership positions across all hierarchy levels (excluding Quoniam Asset Management GmbH and Zentral Boden Immobilien Group) to 30.0 percent by 2030.

<sup>3</sup> With regard to the composition of the Board of Managing Directors at the time the target was set, it was assumed that a higher proportion of women on the Board of Managing Directors could not be achieved by the target date due to a lack of relevant vacancies; the actual figure was 25.0 percent as at December 31, 2024.

The **targets** for **heads of division (1st management level below Board of Managing Directors)** and **heads of department (2nd management level below Board of Managing Directors)** for the entities that fall within the scope of FÜPoG II are listed below in Fig. VII.28. The **targets** and **actual values** for heads of division and heads of department, and for **team leaders / group leaders (3rd management level below Board of Managing Directors)**, are also listed for selected group entities on a voluntary basis.

<sup>1</sup> Not within the scope of FÜPoG I and II.

<sup>2</sup> Reisebank: 1st management level below Board of Managing Directors equivalent to head of division and head of central services; 2nd management level below Board of Managing Directors equivalent to head of department/region and team leader; no target for 3rd management level below Board of Managing Directors.

<sup>3</sup> Going beyond FÜPoG, UMH included a target in its diversity & inclusion strategy to increase the proportion of women in leadership positions across all hierarchy levels (excluding Quoniam Asset Management GmbH and Zentral Boden Immobilien Group) to 30.0 percent by 2030.

<sup>4</sup> Union Investment Privatfonds GmbH: 1st management level below Board of Managing Directors equivalent to head of department; 2nd management level below Board of Managing Directors equivalent to group leader; no target for 3rd management level below Board of Managing Directors.

<sup>5</sup> Based on a proportion of 20 percent in accordance with the EU Level 20 initiative.

<sup>6</sup> VR Smart Finanz: cumulative values for 1st and 2nd management levels; no target for 3rd management level below Board of Managing Directors.

All of these targets are directly linked to the material topics of working conditions and equal treatment / non-discrimination, plus the related IROs. These metrics are not validated by an external body.

#### Policies relating to diversity

Independently of statutory provisions such as FÜPoG<sup>28</sup>, the management units' Boards of Managing Directors signed a **letter of intent** in 2011 in which they committed to actively support women in their career development, to give them the same pay and conditions as men in comparable positions, and to treat them equally when selecting managers with the aim of achieving a gender balance. The letter of intent is the basis for the management units' diversity policies and actions. It was approved by the GHRC and is regularly monitored by the committee in the context of the aforementioned policies and actions. The management units' most senior management level is responsible for its implementation.

The management units, including Reisebank, also signed Germany's **Diversity Charter** between September 2010 and September 2013. The Diversity Charter is a voluntary commitment published in 2006 and a non-profit organization that encourages organizations to create a working environment that is free from prejudice. DZ PRIVATBANK signed Luxembourg's equivalent, the Charte de la Diversité, in May 2024 and the Women in Finance Charter in February 2023.

DZ BANK, DZ HYP, DZ PRIVATBANK, TeamBank, and R+V have each introduced **diversity policies**. The Board of Managing Directors of each entity is responsible for implementation. These policies are aimed at creating a working culture in each entity in which all employees are treated equally, strengthening gender diversity at all management levels, and establishing a balanced and inclusive working environment. The employee structure and demographics at DZ BANK are determined every quarter and form an integral part of the HR division's

<sup>28</sup> In the version of the official announcement on April 30, 2015 (BGBl. I p. 642), effective date May 1, 2015.

management report. This data is used to monitor progress with gender diversity in relation to the proportion of women in leadership positions.

In 2023, UMH signed off its comprehensive diversity & inclusion strategy, which was developed by the Diversity Council. All segments, divisions, and support functions are represented on this council in order to reflect a wide range of perspectives.

Not discriminating against people on the basis of their age, gender, ethnic origin, nationality, religion, political opinion, ideology, race, disability, or sexual identity is a core principle in the DZ BANK Group and part of its human rights-related due diligence obligations. Furthermore, the entities of the DZ BANK Group do not tolerate any form of verbal, physical, or sexual harassment of employees or third parties. The DZ BANK Group's management units are committed to the principles of equal treatment and equal opportunities in their **human rights guideline**.

With regard to temporary workers, all group entities in Germany take the provisions of **collective pay agreements** into account. They also comply with the principle of equal treatment in the German Labor Leasing Act (AÜG, section 8). The implementation into national law of Directive 2008/104/EC on temporary agency work applies in those EU member states and European Economic Area (EEA) countries in which the DZ BANK Group entities are located. Among other things, the Directive defines the principle of non-discrimination between temporary workers and employees within a company.

These policies are directly linked to the material topics of working conditions and equal treatment / non-discrimination, plus the related IROs.

#### Actions relating to diversity

To implement the policies, most entities in the DZ BANK Group offer annual **training on the German General Equal Treatment Act (AGG)**, or similar national protective provisions within the EEA, to all employees and managers. Training is mandatory for managers at DZ BANK. In all group entities, breaches of AGG can be reported anonymously using the relevant whistleblowing system or to an ombudsperson.

DZ BANK offers its employees the **'Unconscious bias' e-learning program** and a classroom-based course entitled **'Female leadership – ready for the next step'** on an ongoing basis. The list of internal CPD courses allows DZ BANK employees to select courses from a range of focus topics, such as 'Diversity and critical communications', 'Cultural diversity', and 'Queerness at DZ BANK AG' in the DZ BANK channel on the Masterplan platform (see chapter VII.3.2.2). DZ BANK's CPD offering is also open to VR Equitypartner employees. Equal opportunities are enshrined in DZ BANK's corporate culture (see chapter VII.1.3). The dialogues arranged by DZ BANK in the different areas of board responsibility during the year boost equal opportunities by supporting transparency about the personnel and demographic structure. They also facilitate the identification of talented individuals and the transparent sharing of information about them.

DZ PRIVATBANK took further action inhouse in order to implement its diversity policy and boost diversity. It has also established a **roundtable** aimed at increasing the proportion of female managers. The roundtable enables female managers and high-potential female employees to network and discuss the latest topics, such as career development for women and work-life balance. The roundtable is held several times a year.

In order to implement its diversity strategy, R+V encourages discussion and awareness of diversity in its workforce through its **diversity network**. The purpose of the diversity network is to operationalize the diversity strategy in order to increase understanding of diversity matters, promote a more inclusive corporate culture, and expand opportunities for career development. The diversity network was established in 2021 and has been meeting every quarter since.

At TeamBank, the implementation of the diversity policy includes actions relating to recruitment, pay, training and CPD, and **equal opportunities** for different genders at management level. Furthermore, employee activities are held as part of the annual **Diversity Day**. As a signatory to the Diversity Charter, TeamBank organized activities such as offering a selection of dishes from around the world in the cafeteria and running a diversity quiz to mark the 12th German Diversity Day in 2024. Every year, the bank takes part in Girls' Day in order to get girls and young women interested in IT, science, and technology. The aim is to awaken their curiosity, break down barriers, boost their confidence in their skills, and enable them to test their abilities in practice by bringing them face to face with technology.

In the course of implementing its diversity & inclusion strategy, and to raise awareness of diversity, UMH takes targeted, ongoing action such as running **workshops on unconscious bias**, posting **inclusive job advertisements**, and maintaining **diversity networks**.

VR Equitypartner avoids any gender forms in its German-language documents and only uses the generic masculine form when referring to people generally and for gendered nouns in its German-language communications. In doing so, it follows the recommendations of the Rat für deutsche Rechtschreibung (RdR) [Council for German Orthography] of the Kultusministerkonferenz [Standing Conference of the Ministers of Education and Cultural Affairs]. The marketing division produces and carries out quality checks on VR Equitypartner's fundamental procedural instructions and communications to ensure that the inhouse requirements are satisfied.

#### Metrics relating to diversity

The number of employees at the top management level of the DZ BANK Group is broken down by gender in Fig. VII.29. To calculate the percentage share, the number of employees of each gender at the top management level as at the reporting date was divided by the total number of employees of each gender as at the reporting date. The top management level is the first management level below governing bodies such as the Board of Managing Directors, so heads of division and director-generals would, for example, belong to the top management level, unless they are themselves deemed a governing body. The second management level includes heads of department, for example, and is not part of the top management level. The figures are presented as a headcount and as a percentage. The proportion of women at the top management level was 17.4 percent in 2024.

FIG. VII.29: GENDER DISTRIBUTION AT THE TOP MANAGEMENT LEVEL IN THE DZ BANK GROUP (AS AT DECEMBER 31)

|            | Head-count | Percent-age |
|------------|------------|-------------|
| Men        | 204        | 82.6%       |
| Women      | 43         | 17.4%       |
| Non-binary | -          | 0.0%        |

Fig. VII.30 shows the percentage shares for the age structure of the DZ BANK Group's workforce, broken down by employees under the age of 30, between 30 and 50, and over 50. The figures are presented as a percentage. To calculate this, the number of employees in each age group as at the reporting date was divided by the total number of employees as at the reporting date.

FIG. VII.30: AGE STRUCTURE OF THE DZ BANK GROUP (AS AT DECEMBER 31)

|                     | Percentage |
|---------------------|------------|
| Age group: under 30 | 13.9%      |
| Age group: 30–50    | 50.3%      |
| Age group: over 50  | 35.8%      |

#### Targets relating to equal opportunities

To date, no measurable, outcome-oriented targets have been implemented for tracking the effectiveness of policies and actions related to the permanent integration of people with disabilities. All group entities located in Germany aim to meet the minimum statutory level of 5 percent.

#### Policies relating to equal opportunities

The permanent integration of people with disabilities in all divisions and at all offices of the DZ BANK Group is an aim of the various entities' corporate policies. Most management units enshrined this in a **groupwide inclusion agreement** at the end of 2022. The participating entities undertake to ensure that, given the ongoing changes in the world of work, people with severe disabilities are offered opportunities to fulfill and develop their potential and do not view impairments resulting from severe disability as a limitation. The inclusion agreement is designed to eliminate discrimination and foster equal opportunities, diversity, and inclusion. Its aims include meeting the statutory employment quota, offering skills training, and ensuring accessibility in offices, particularly when constructing or renovating premises.

DZ BANK and BSH have an **integration agreement** in place that, like the DZ BANK Group's inclusion agreement, aims to eliminate discrimination and foster equal opportunities, diversity, and inclusion. The integration agreement is intended to support the integration, within what is operationally feasible, of people with severe disabilities. It is the vehicle through which the rights and obligations of the employer, the representative committee for employees with severe disabilities, the works council, and the employees with severe disabilities, as defined by the German Severely Disabled Persons Act, are enforced. The implementation of the integration agreements is the responsibility of the Board of Managing Directors of the individual group entity, and is monitored by the respective HR divisions.

Both policies are directly linked to the material topics of working conditions and equal treatment / non-discrimination, plus the related IROs.

#### Actions relating to equal opportunities

**Representative committees for employees with severe disabilities** have been established within most of the DZ BANK Group at local, company-wide, and groupwide level. Their task is to look after the interests of people with severe disabilities at the time of recruitment, for the duration of the employment relationship and, where applicable, when the employment contract ends. For example, they advise on workplace set-up, making sure that any required special equipment is provided. If disciplinary action is taken, the representative committee for employees with severe disabilities and the workers' representatives have a special protective function, for example during consultations on dismissals.

The role of group inclusion officer was established in the course of implementing the groupwide inclusion agreement. This action is ongoing in most management units.

#### Metrics relating to equal opportunities

The ratio of people with disabilities in the DZ BANK Group was 3.7. To calculate this ratio, the number of employees with a certified degree of disability of 50 or above and people with a certified degree of disability of 20 or above whose disability is officially recognized as being equal to a severe disability as at the reporting

date was divided by the total number of employees as at the reporting date. The definition of people with disabilities set out in section 2 (1) of the German Social Code (SGB IX) is binding in Germany. Sites outside Germany with 20 or more employees used local statutory definitions for people with disabilities.

#### Targets relating to work-life balance

To date, no measurable, outcome-oriented targets have been implemented for tracking the effectiveness of policies and actions related to improving work-life balance.

#### Policies relating to work-life balance

Most of the entities in the DZ BANK Group support a better work-life balance by offering flexible working hours, part-time models, remote working, semi-retirement, and sabbatical leave. These options are governed by **internal agreements** in most of the group entities. Rules for remote working have been established in the management units and in some cases include new workspace and leadership concepts.

Numerous local company agreements are in place in the DZ BANK Group to support a better work-life balance. These allow employees to decide, in consultation with colleagues and managers, and in accordance with the interests of the respective group entity, when and how to work their hours. **Company agreements on working time** that regulate flexible working hours and life planning are in place at DZ BANK, UMH, BSH, and VR Smart Finanz. The company agreements cover topics such as flexible working hours, part-time models, semi-retirement, sabbatical leave, and additional leave that enable employees to take time off when they need to. **Remote working** is regulated in **company agreements** at DZ BANK, BSH, VR Smart Finanz, and Team-Bank. The company agreements provide the general parameters for remote working, such as availability, working hours, workplace design, and insurance cover. The implementation of the company agreements is the responsibility of the Board of Managing Directors of each group entity, and is monitored by the respective HR divisions and workers' representatives.

The law gives all DZ BANK Group employees at German sites the **right to take parental leave**. Each parent is entitled to take 3 years off work per child until the child reaches the age of eight. Employees in the collectively-negotiated (CN) wage sector who have been with certain DZ BANK Group entities for 5 years or more (regardless of their type of employment) are entitled to extend the statutory parental leave by 6 months, again until the child reaches the age of eight.

These policies are directly linked to the material topic of working conditions, plus the related IROs.

#### Actions relating to work-life balance

Voluntary additional benefits aimed at improving work-life balance form a permanent part of HR policy in the DZ BANK Group and support employees with the demands of everyday life. Most of the DZ BANK Group offers **employee benefits** such as childcare, emergency assistance, and special leave. In addition to **flexible working hours**, employees in most of the DZ BANK Group entities benefit from **flexible forms of work, semi-retirement, and sabbaticals**. These are an ongoing feature of the company agreements on working time.

DZ BANK employees, for example, **can arrange their working hours and breaks flexibly and can accumulate overtime**. Compensation for overtime is guaranteed by means of flexitime and can be converted into time off in lieu, for example. The actions under the company agreements on working time at VR Smart Finanz include **time balances, the reduction of time credits, and pay supplements**.

In accordance with the entity-specific rules on working time, employees and managers at DZ BANK, DZ PRIVATBANK, VR Smart Finanz, and TeamBank can also **gain additional annual leave through salary sacrifice**, for example. This option is offered on an ongoing basis. The possibility of switching from full-time

to part-time is offered in all group entities on an ongoing basis, taking into account the entity-specific rules on working time.

As the reasons for taking longer breaks from work depend on the employee's specific circumstances, DZ BANK offers a **sabbatical** as a way of taking up to a year off work. BSH employees also have the option of taking a sabbatical, which is offered in implementation of the company agreement on working time. It comprises a leave phase and a work phase, for which the employee is paid a reduced salary throughout. Employees can also request to work part-time. This option is offered on an ongoing basis.

Under the respective company agreements on remote working, employees at DZ BANK, BSH, VR Smart Finanz, and TeamBank can meet the **obligations in their employment contract away from company premises**, giving them greater flexibility regarding work location and a better work-life balance.

Most of the group entities have agreed to undergo the **'berufundfamilie' (job and family) audit** at the specified intervals in implementation of the entity-specific agreements on working time. The participating entities also undertake to implement any action steps agreed during the audit by berufundfamilie Service GmbH. The process has multiple stages: After the initial audit, 2 further re-audits are scheduled every three years and are followed by the dialogue procedure. The aim of the process is to enable entities to become self-monitoring. There are 8 areas of action on which the targets and action steps are based: working hours, organization of work, work location, information and communication, leadership, professional development, remuneration elements and benefits in kind, and services for families.

All employees at DZ BANK, DZ HYP, DZ PRIVATBANK, R+V, TeamBank and UMH can access the nationwide **pme Familienservice** services. This is offered on an ongoing basis in implementation of the entity-specific agreements on working time and forms part of a broad selection of free support and advisory services. These can be short-term and temporary or permanent and regular, and include homecare/eldercare, advice for parents, childcare, and a concierge service that can help with running errands, etc. This flexibility helps to achieve a good work-life balance.

In 2022, BSH established a **women's network** and, in 2024, facilitated dialogue with employees who are parents by arranging breakfast sessions with the Board of Managing Directors. The women's networks are offered as ongoing platforms for dialogue aimed at promoting equal opportunities. Furthermore, BSH offers its employees the chance to take a break from work in order to bring up their children, a benefit that goes beyond the statutory and collectively negotiated arrangements. The terms and conditions are governed by the company agreement on working time. BSH allows employees who are carers to take 24 months of unpaid leave, and runs its own retirement home for former employees and their family members.

#### Metrics relating to work-life balance

In 2024, 100.0 percent of employees were entitled to take leave from work for family reasons. To calculate this, the number of employees that were entitled to take leave from work for family reasons under national law as at the reporting date was divided by the total number of employees as at the reporting date. Maternity leave and parental leave are examples of leave from work for family reasons. Fig. VII.31 provides a breakdown by gender of entitled employees who took leave from work for family reasons. To calculate this, the number of entitled employees who took leave from work for family reasons during the reporting year, broken down by gender, was divided by the number of entitled employees during the reporting year, broken down by gender.

FIG. VII.31: GENDER DISTRIBUTION OF EMPLOYEES TAKING LEAVE FROM WORK FOR FAMILY REASONS (FIGURE FOR THE YEAR)

|            | Percentage of entitled employees who took leave from work for family reasons |
|------------|------------------------------------------------------------------------------|
| Male       | 3.8%                                                                         |
| Female     | 7.9%                                                                         |
| Non-binary | -                                                                            |

### 3.2.4 Remuneration, social protection, and workers' participation rights (S1-1, S1-4, S1-5, S1-8, S1-10, S1-11, S1-16)

#### Targets relating to remuneration

To date, no measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to the remuneration process.

#### Policies relating to remuneration

The DZ BANK Group entities pride themselves on having good employer-employee relationships. This is expressed in fair, performance-based remuneration that is enshrined in guidelines at all entities. Most of the group entities apply the German Remuneration Regulation for Institutions (InstitutsVergV). Section 27 InstitutsVergV requires the senior management of the parent company to define a groupwide **remuneration strategy**. The Board of Managing Directors of DZ BANK must define a remuneration strategy both for DZ BANK and for the entities in the DZ BANK Group that implements the requirements of InstitutsVergV for the institutions in the DZ BANK Group. If a subordinated entity located outside Germany is subject to stricter statutory requirements than those that apply in Germany, the stricter requirements must be met. The DZ BANK Group's remuneration strategy sets out uniform rules for the groupwide management of remuneration that apply to the remuneration systems of the entities in the DZ BANK Group. This remuneration strategy does not apply to the R+V insurance group, as R+V is not covered by the group definition of the scope of consolidation for regulatory purposes as defined in InstitutsVergV. On the basis of this framework, each subordinated entity is obliged to document its subgroup's compliance with the agreed principles and to present this for inspection by DZ BANK. Decentralized decision-making powers are one of the features of the management approach taken within the DZ BANK Group. Systematic coordination between all entities in the DZ BANK Group is necessary to ensure compliance with InstitutsVergV and other remuneration-related regulatory requirements. Company-law provisions and local rules – especially in relation to the independence of the subsidiaries – are also taken into account. The remuneration strategy is reviewed and, if necessary, amended at least once a year.

The entities in the DZ BANK Group that are based in Germany comply with the **German Remuneration Transparency Act (EntgTranspG)**, which was enacted to ensure equal pay for women and men doing equal or equivalent work. As the law requires companies to report every five years from 2018, the most recent report for DZ BANK was published with the 2022 management report.

In accordance with the remuneration strategy, remuneration is a material HR management tool for the DZ BANK Group. The aims of the DZ BANK Group's remuneration structure are to

- give each employee an incentive to contribute personally to the sustainable implementation of the strategic objectives of the DZ BANK Group and the individual divisions;
- award equal pay to all employees who are doing the same job, are of equal merit, and have the same level of experience, irrespective of gender, age, origin, or other characteristics;
- reward performance without encouraging employees to take unwanted risks;
- attract talented employees, motivate them, and encourage them to remain in the DZ BANK Group.

The remuneration policy is published on a consolidated basis each year in accordance with InstitutsVergV and the **EU Capital Requirements Regulation (CRR)**. It is published for the entities to which the remuneration strategy applies. In accordance with the remuneration strategy, the remuneration of employees of the DZ BANK Group generally consists of a fixed element and a variable element. The level of fixed remuneration is determined by market conditions, the importance of the employee's role, and the employee's personal qualities. Depending on the remuneration system of the group entity, the level of variable remuneration reflects the employee's personal performance, the entity's success, and the success of the division in which the employee works. At the institutions in the DZ BANK Group, measures are in place to ensure that variable remuneration does not exceed fixed remuneration. A departure from this rule is permitted only in justified exceptional cases and requires a resolution to be adopted in accordance with section 25a (5) KWG. For employees in control units as defined in InstitutsVergV (such as Group Risk Controlling or Group Audit), the focus is on the fixed part of the remuneration.

These policies are directly linked to the material topic of working conditions, plus the related IROs.

#### Actions relating to remuneration

The actions taken to implement the remuneration strategy include not only adequate remuneration but also voluntary benefits that the entities in the DZ BANK Group offer in order to make them an attractive place to work and to promote a good work-life balance. In most of the DZ BANK Group entities, unpaid leave and flexible working hours with the option of flexitime or part-time models help employees to find the right work-life balance (see chapter VII.3.2.3). These are offered on an ongoing basis.

**Employer-specific benefits** such as long-service awards, subsidized travel cards, and travel subsidies are commonly offered by the group entities in implementation of the company agreements. The purpose of these actions is to enhance the attractiveness of the workplace.

In implementation of the remuneration strategy, the remuneration systems in most group entities require **annual target agreement and attainment reviews** to be held for all employees and managers in the NCN wage sector. Some group entities also carry out internal analysis every year as part of the salary processes in order to uncover and counter any discrimination at an early stage. The analysis looks at criteria such as age and period of service, as well as gender.

The workers' representatives at DZ BANK and TeamBank are informed of all pay rises in advance and are given the opportunity to **comment** if they suspect arbitrary decisions or discrimination. All DZ BANK employees have the right, on the basis of the information provided to them in accordance with EntgTranspG, to be given the reasons for their level of salary if they feel that, due to gender discrimination, their pay is unfair compared with that of employees of the opposite gender in an equal or equivalent role. They also have the right to a discussion with their manager on the adequacy of their salary and on the opportunities for salary increases.

#### Metrics relating to remuneration

The unadjusted gender pay gap is the difference between the average pay levels (gross hourly pay levels) of female and male employees, expressed as a percentage of the average gross hourly pay level of male employees. The gender pay gap thus reflects the difference between the average remuneration of men and women. The unadjusted gender pay gap in the DZ BANK Group is 20.8 percent.

Factors explaining salary differences are not included in the calculation of the unadjusted gender pay gap. For example, the unadjusted gender pay gap does not distinguish between employees in different roles or between employees with and without management responsibility. Such factors need to be included in order to ascertain whether men and women doing equal or equivalent work receive equal pay.

The calculation of the gender pay gap included all female and male employees except members of governing bodies, i.e. no members of the Supervisory Board or Board of Managing Directors, at all DZ BANK Group entities as at December 31, 2024. In addition to the basic salary and any variable remuneration, pay elements such as occupational pensions were taken into account. The average salary is calculated by dividing the annual total remuneration of male employees and of female employees by the number of hours worked by male and female employees respectively. The annual total remuneration and the number of hours worked are extrapolated for full-time employment.

The annual total remuneration ratio for the DZ BANK Group is 30.9. It is the ratio of the annual total remuneration of the highest paid person in the DZ BANK Group to the median income of the employees in the DZ BANK Group, in both cases on a full-time basis. The same group of people was used to calculate the total remuneration ratio as for the calculation of the gender pay gap. Both employees and members of the governing bodies of DZ BANK and other group entities were taken into account in defining the highest-paid person in the numerator of the total remuneration ratio. The median income in the denominator of the total remuneration ratio is the median annual total remuneration for all employees, excluding the highest paid person and excluding members of the governing bodies. The total remuneration ratio is calculated using the individual total remuneration data provided by the group entities.

DZ BANK and a number of other group entities operate in various countries. Rules on minimum wages are adhered to in countries with relevant legal provisions. In other countries, DZ BANK pays adequate wages in line with local customs.

If a country does not have a statutory or collectively negotiated minimum wage, DZ BANK sets an appropriate guide figure for wages in the DZ BANK Group. Trainees and interns were not included in the calculation.

#### Targets relating to social protection

No measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to social protection.

#### Policies relating to social protection

With regard to temporary workers, all group entities in Germany take the provisions of collective pay agreements into account. They also comply with the principle of equal treatment in the German Labor Leasing Act (AÜG), which governs the supply of temporary workers by their employer/agency to third parties / temporary employers. Under the act, temporary workers are entitled to certain benefits, such as remuneration, vacation pay, Christmas bonuses, communal facilities, and company-owned childcare centers, even if the agency is their actual employer. This does not include occupational pension provision or discounts for employees. Where an entity is based in the EEA, the applicable national provisions on labor leasing apply.

This policy is directly linked to the material topic of equal treatment / non-discrimination, plus the related IROs.

#### Actions relating to social protection

As well as the **basic provision for old age and sickness enshrined in law** in Germany, the majority of the entities in the DZ BANK Group provide other **employee benefits** (see chapter VII.3.2.3), some of which are available at the sites abroad. In addition, all entities in the DZ BANK Group offer group accident insurance and an occupational pension scheme to their employees at their German sites. DZ BANK, for example, provides contingency benefits and a subsidy for childcare costs for employees in Germany who find themselves in an

emergency through no fault of their own. Contingency benefits are granted in the event of extraordinary burdens due to illness or other misfortune, or where there is extreme pressure on an employee's financial circumstances.

#### Metrics relating to social protection

All employees at the DZ BANK Group's sites in Germany enjoy social protection in line with German legislation, along with additional benefits offered by the individual entities. Coverage at the German sites stands at 100.0 percent. There are no employees who do not enjoy social protection in respect of major life events, such as illness, unemployment, employment injuries and acquired disabilities, parental leave, and retirement, or in respect of disability.

#### Targets relating to workers' participation rights

No measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to workers' participation rights.

#### Policies relating to workers' participation rights

For the DZ BANK Group's sites in Germany, **freedom of association, the right to collective bargaining, and the right to strike are enshrined in Germany's constitution** (German Constitution, article 9 (3)). Forming, joining, or being a member of a labor union must never be a reason for unjustified discrimination or retaliation. Most management units are also covered by the **German Works Council Constitution Act**. This act governs matters such as the collaboration between the employer and the works council. The DZ BANK Group believes that there is no risk to the right to freedom of association or collective bargaining at any of the DZ BANK Group's permanent establishments in the EEA.

As a minimum, the entities apply the **ILO fundamental conventions** at their sites outside Germany if the local statutory requirements are less strict or do not exist at all (see chapter VII.3.2.5). The fundamental conventions of the ILO apply in full to all employees in the DZ BANK Group. Accordingly, the DZ BANK Group recognizes the right of all employees to form labor unions and employee representative bodies on a democratic basis within the framework of national legislation.

The remuneration of employees covered by collective bargaining at DZ BANK is based on the prevailing version of the **framework collective agreement (MTV)** and the **collective pay agreement (VTV)** for the local cooperative banks and the cooperative central institution. The employees are banded into the pay groups defined in the collective pay agreement in accordance with the nature of their work and number of years in the role. This process considers the following criteria: skills and expertise, ability to communicate, and responsibility. Other collective pay agreements apply in most other group entities, such as the collective pay agreement for the private banking industry, the collective pay agreement for the insurance industry, the framework collective agreement for banks and building societies, a collective agreement for a specific bank, and the Luxembourg collective pay agreement for bank employees.

These agreements are directly linked to the material topics of working conditions and equal treatment / non-discrimination, plus the related IROs.

#### Actions relating to workers' participation rights

For the management units, the spectrum of workers' participation ranges from **works councils and central works councils** at local level through to the group works council and workers' participation within the Supervisory Board (see chapter VII.1.3). Due to the governance structure, it is not possible for employees to be involved directly; instead, they participate through the employee representative body. Employees can always contact the Board of Managing Directors directly via the employee representative body or express their opinion in employee surveys.

Most entities in the DZ BANK Group notify employees about current **collective pay bargaining** and **wage settlements** via the intranet, which is freely accessible to every employee, and implement the agreements reached. At the sites in Germany, the individual employee representative bodies also ensure that employees receive information about collective pay agreements.

#### Metrics relating to workers' participation rights

Within the EEA, 62.4 percent of employees in the DZ BANK Group were covered by collective agreements in 2024. Outside the EEA, 15.5 percent of employees in the DZ BANK Group were covered by collective agreements in 2024. To calculate this, the number of employees covered by collective agreements within and outside the EEA as at the reporting date, broken down by country, was divided by the total number of employees in each country as at the reporting date.

Within the EEA, 92.1 percent of employees in the DZ BANK Group were covered by employee representative bodies in 2024. To calculate this, the number of employees covered by employee representative bodies in the EEA as at the reporting date, broken down by country, was divided by the total number of employees in each country as at the reporting date. Fig. VII.32 shows the rate of coverage by employee representative bodies within and outside the EEA. No agreement exists in the DZ BANK Group for representation by a European Works Council, a Societas Europaea (SE) Works Council, or a Societas Cooperativa Europaea (SCE) Works Council.

FIG. VII.32: EMPLOYEE REPRESENTATION IN THE DZ BANK GROUP (AS AT DECEMBER 31)

| Coverage rate    | Collective bargaining coverage | Social dialogue                     |
|------------------|--------------------------------|-------------------------------------|
|                  | Employees – EEA                | Workplace representation (EEA only) |
| 0 - 19 percent   |                                |                                     |
| 20 - 39 percent  |                                |                                     |
| 40 - 59 percent  |                                |                                     |
| 60 - 79 percent  | Germany                        |                                     |
| 80 - 100 percent |                                | Germany                             |

### 3.2.5 Occupational health and safety (S1-1, S1-4, S1-5, S1-14)

#### Targets relating to occupational health and safety

No measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to occupational health and safety. Employees of DZ BANK do not have jobs that put them at higher risk of illness or accident.

#### Policies relating to occupational health and safety

The entities in the DZ BANK Group provide safe workplaces for their employees to prevent accidents, damage to health, and illness. In Germany, occupational health and safety is governed by the **Health and Safety at Work Act (ArbSchG)**, which is designed to protect employees from dangers and damage to health. Increasingly, occupational health and safety aims to prevent damage to mental as well as physical health. ArbSchG is binding for all employers and requires them to assess workplaces with regard to factors that represent a hazard. Furthermore, ArbSchG requires employers to take precautionary measures in hazardous work areas and provide health and safety training for employees.

As a minimum, the DZ BANK Group applies the **ILO fundamental conventions** regarding occupational health and safety if statutory requirements are less strict or do not exist at all.

BSH, DZ BANK, and VR Smart Finanz have implemented their own **guidelines or company agreements** aimed at **dealing with and preventing addiction**. Specifically, they set out to strengthen efforts to prevent addiction, offer help to addicts and those at risk of addiction as early as possible, and to counter substance abuse within the organization and thereby indirectly increase workplace safety. The respective member of the Board of Managing Directors with responsibility for Human Resources, the national or local works council, and the representative committee for employees with severe disabilities are responsible for implementing company agreements. Since guidelines are generally signed off and communicated to the workforce by the Board of Managing Directors, which is therefore also implicitly responsible for their implementation and monitoring.

**Company agreements on carrying out risk assessments** are in place at DZ BANK, BSH, R+V, UMH, and VR Smart Finanz. The respective member of the Board of Managing Directors, the local works council, and the representative committee for employees with severe disabilities are responsible for implementing company agreements. TeamBank carries out a risk assessment every 3 years using formal processes that are not additionally governed by a company agreement.

In accordance with the company agreements, assessments of physical and mental health risks are carried out at all DZ BANK sites in Germany. The agreements define the process and how often they are carried out. Mental health risk assessments are aimed at identifying and evaluating possible health risks in the form of stressful working conditions and defining action to improve these working conditions. DZ BANK's mental health risk assessment is an ongoing process based on scientific research and guidelines and supported by an external service provider.

**Company agreements on workplace design** are in place at BSH, DZ BANK, DZ HYP, DZ PRIVATBANK, R+V, and VR Smart Finanz. The aim is to design office space in a way that meets requirements, encourages collaboration between employees, creates an attractive workplace, and maintains the health of employees. The works councils, the respective heads of department, and the Board of Managing Directors monitor compliance with company agreements and are responsible for their implementation.

These agreements are directly linked to the material topics of working conditions and equal treatment / non-discrimination, plus the related IROs.

#### Actions relating to occupational health and safety

As an action implementing the company agreements, the majority of the group entities have appointed **company doctors** and occupational safety specialists at their sites in Germany. They advise employees on health and safety in the workplace and check individual workstations regularly and on an ad hoc basis. They also carry out workplace inspections as part of formal processes, for example to identify poor ergonomics.

All employees, including heads of department, are represented on the official **employer-employee committee** for health and safety at work that exists in the main management units. The committee is made up of the occupational safety specialist, the company doctor, the social counseling service, and the representative committee for employees with severe disabilities, plus someone from the HR division to represent the employer. It meets once a quarter or four times a year, as stipulated in section 11 of the German Act on Occupational Physicians, Safety Engineers and Other Occupational Safety Specialists (ASiG). Reisebank, VR Equitypartner, and VR Payment have similar committees in accordance with section 11 ASiG. The committee discusses matters relating to health and safety and the prevention of accidents in order to rectify any failings or take preventive action.

The majority of entities have also established **independent social counseling services** that provide ongoing support and help employees and managers to deal with psychological stress, for example by providing training on how to prevent such stress in the workplace. All employees returning to work after a lengthy period of illness receive assistance via the company return-to-work and disability management program at all sites in Germany. Implementing such a program has been a legal requirement for employers in Germany since May 1,

2004. It helps employees who have been unable to work for a period longer than 6 weeks, or are repeatedly unable to work, to re-enter working life as quickly as possible (section 167 SGB IX).

The DZ BANK Group entities offer a wide range of **workplace health services** aimed at maintaining their employees' performance levels. These range from company sports groups to flu vaccinations and special preventive healthcare offerings. In most of the entities, the HR divisions are generally responsible for the ongoing provision of health services; there are no groupwide guidelines on this.

At DZ BANK, mental health is a topic on some **management training courses**, which are provided on an ongoing basis. These courses are also offered by DZ PRIVATBANK, R+V, Reisebank, VR Equitypartner, and VR Payment. Most of the entities in the DZ BANK Group provide ongoing preventive mental health courses as part of their CPD programs. DZ BANK, for example, offers training sessions on active management of stress. These actions to promote the health and wellbeing of employees form part of the implementation of local occupational health and safety requirements and of each group entity's company agreements on risk assessments.

Most of the management units offer **bicycle leasing** on an ongoing basis.

#### Processes relating to occupational health and safety

Most of the management units take the views of employees into account through **online surveys conducted as part of the mental health risk assessment**. The survey process guarantees anonymity and confidentiality at all times. The first analysis stage at DZ BANK, for example, is an anonymous online questionnaire for employees. This is followed by department-specific interviews in which the sources of stress are defined and actions steps to reduce them are developed. Once these action steps have been implemented, effectiveness checks are carried out to assess whether the steps achieved their aims and resulted in marked improvements. Checks carried out to assess the effectiveness of the actions taken so far show that they are targeted and have resulted in marked improvements.

At DZ BANK, a separate company agreement on conducting mental health risk assessments, including a data protection policy, is in place for every site in Germany. Dialogue and the provision of information are ensured through training and technical support in accordance with the company agreement, and through complementary workshops before and after the survey.

#### Metrics relating to occupational health and safety

Continuous improvement of occupational health and safety, compliance with applicable laws on health and safety at work and other comparable national legislation and groupwide standards, and the achievement of health and safety targets are all part of the DZ BANK Group's occupational health and safety management system. Compliance with national statutory provisions can be used to achieve full coverage. Coverage of 100.0 percent is therefore assured from the perspective of the DZ BANK Group.

In the reporting year, the entities in the DZ BANK Group recorded no fatalities in their own workforces and no fatalities among other workers at their sites as a result of work-related injuries or illnesses. The calculation was based on the number of fatalities during the reporting year.

There were 231 reportable workplace accidents at the German sites in 2024. The rate of reportable work-related accidents was calculated by multiplying the number of reportable work-related accidents during the reporting year by the average number of hours worked and then dividing it by 1,000,000. This gives a **rate** of 4.3.

There were no known breaches of health and safety regulations.

### 3.2.6 Human rights relating to the DZ BANK Group's own workforce (S1-1, S1-2, S1-3, S1-4, S1-5, S1-17)

#### Targets relating to the workforce's human rights

No measurable, outcome-oriented targets have been implemented for tracking the effectiveness of policies and actions related to human rights.

#### Policies relating to the workforce's human rights

For the DZ BANK Group, the upholding of human rights provides the foundations for sustainable development. For the entities of the DZ BANK Group, sustainable development is the benchmark for business conduct that takes a long view and meets commercial, environmental, and social challenges head on. Any violation in its own operations or in those of its business partners would result in reputational damage and a loss of confidence. That is one of the reasons why the DZ BANK Group recognizes the **Universal Declaration of Human Rights proclaimed by the United Nations General Assembly** and the **European Convention on Human Rights**. It is also committed to the 10 principles of the 10 UN Global Compact, covering the areas of human rights, labor standards, the environment, and anti-corruption, at all of its German and international sites. The DZ BANK Group entities also follow the **ILO's fundamental conventions** regarding freedom of association, the right to form a labor union, the right to equal pay for equal work for women and men, the elimination of discrimination at work, and the ban on forced labor and child labor. Together with the DZ BANK Group's code of conduct and human rights guideline, these principles form the binding frame of reference for the practices of the group entities (see chapter VII.0).

In its **code of conduct**, the DZ BANK Group makes a commitment to democratic values, tolerance, equality of opportunity, and the protection of human rights, and provides its employees with principles and rules on how to behave properly and responsibly, particularly in their dealings with customers, business partners, and colleagues. The entities of the DZ BANK Group do not tolerate any discrimination against employees or third parties on the basis of age, gender, origin, nationality, religion, political opinion, ideology, disability, or sexual identity. The DZ BANK Group also strictly rejects any form of forced labor or child labor and recognizes the right of all employees to form labor unions and employee representative bodies on a democratic basis within the framework of national legislation. The principle of protecting labor rights as defined by the ILO and its fundamental conventions applies in full to all employees in the DZ BANK Group. Human rights aspects are also taken into account in the business activities of the group entities, for example in the procurement processes of the DZ BANK Group, the lending process at DZ BANK, and business portfolio management at UMH. The code of conduct requires all managers and employees of the DZ BANK Group to respect human rights and act in compliance with the law and ethical standards.

The DZ BANK Group's **human rights guideline** adds more detail to the human rights principles set out in the code of conduct and was adopted by the GSC. In particular, the guideline covers the Universal Declaration of Human Rights (UDHR) proclaimed by the United Nations General Assembly and the European Convention on Human Rights (ECHR). In its human rights guideline, the DZ BANK Group makes a commitment to democratic values, tolerance, equality of opportunity, and the protection of human rights. The individual entities are conscious of their particular responsibility toward customers, business partners, shareholders, employees, and society. The human rights-related principles contained in the guideline are followed by the DZ BANK Group entities and continuously refined.

The **German Supply Chain Due Diligence Act (LkSG)** requires companies to respect human rights and certain environmental aspects in their own operations and in relation to their supply chain. The main areas covered are the prevention of child labor, slavery, and forced labor, disregard for occupational health and safety regulations, non-payment of adequate wages, disregard for the right to form labor unions and employee representative bodies, refusal of access to food and water, and the illegal seizure of land and withdrawal of livelihoods.

These agreements are directly linked to the material topics of working conditions and equal treatment / non-discrimination, plus the related IROs.

#### Actions relating to the workforce's human rights

The DZ BANK Group entities to which LkSG apply (DZ BANK, BSH, R+V Allgemeine Versicherung, R+V Lebensversicherung AG, R+V Service Center GmbH, and TeamBank) have adopted a **risk management system** for dealing with human rights-related and environmental obligations that the DZ BANK Group believes is appropriate and effective. It has been integrated into all relevant company procedures and the responsibilities have been defined.

These entities have appointed **human rights officers** to monitor risk management with regard to human rights-related and environmental due diligence obligations. The officers are required to report internally to the Board of Managing Directors and externally to the German Federal Office for Economic Affairs and Export Control.

DZ BANK, BSH, R+V, and TeamBank carried out a **risk analysis** for 2024. The purpose of the analysis pursuant to LkSG is to identify, give a weighting to, and set the priorities for human rights-related and environmental risks in the entity's own operations. The first step was to examine country-specific and sector-specific risks in an abstract risk analysis. Building on this, a more targeted risk analysis looked at these abstract risks and assessed them using the following criteria: likelihood of occurrence, severity, causal contribution, and scope of influence. The LkSG risk analysis examines the impact of each group entity's business activities on employees and the environment. It thus provides the basis for the validation of preventive measures and the definition of suitable remedial action. The risk analysis is carried out annually for each financial year.

DZ BANK, BSH, R+V, and TeamBank used the risk analysis of their own operations and their supply chain as the basis for their **human rights strategy** and published it as part of a **policy statement on respect for human rights**. It includes a commitment to international human rights standards and the expectation that employees and suppliers respect human rights, and details the structure and responsibilities for fulfilling due diligence obligations. Each policy statement on respect for human rights signed off by the relevant Board of Managing Directors and addresses the human rights strategies and related expectations and actions in relation to employees and suppliers. The policy statements on respect for human rights are updated every year based on the risk analysis. They are published on the corporate websites and communicated separately to employees and suppliers. The group entities also regularly train their employees on complying with and implementing the LkSG requirements.

#### Processes relating to the workforce's human rights

The DZ BANK Group's employees and stakeholders, such as customers, suppliers, and external staff, can report suspected violations of, or risks relating to, human rights or environmental regulations in confidence using the relevant **whistleblowing system** or **LkSG complaints process** (see chapter VII.4.3).

BSH, DZ BANK, R+V, and TeamBank have formulated an **LkSG complaints process** that allows employees, suppliers, and other stakeholders to pass on information or report violations of human rights or environmental regulations to the company in confidence. Anyone who is potentially affected can use the LkSG complaints process to highlight human rights-related or environmental risks, or to report breaches of relevant obligations resulting from the company's commercial activities or those of affiliated companies, direct suppliers, and indirect suppliers. The other provisions of section 8 LkSG were also implemented.

The need to protect complainants and handle complaints confidentially was factored into the design of the complaints process. The factual content of information received is examined in detail by a small, select group of specially trained employees, with the involvement of the organizational unit(s) affected by the complaint, and assessed with regard to human rights-related and environmental risks. Any necessary preventive and/or

remedial action is taken as required. If complaints about the business practices of an entity falling within the scope of LkSG prove to be justified, the entity is ordered to take appropriate remedial action.

Employees have been informed of these complaints channels in communications, and information about the complaints process (including process steps and responsibilities) has been made publicly available. In 2024, the effectiveness of DZ BANK's complaints processes was reviewed as part of the human rights officer's monitoring activities.

LkSG grievance mechanisms have an important role to play in uncovering and avoiding human rights-related risks. The objective is to identify deficiencies and violations in this area as soon as possible. To prevent potential violations, all insights gleaned from complaints are incorporated into annual risk analyses, human rights-related and environmental actions, and training and business processes.

In all group entities, breaches of AGG and similar national protective provisions at other sites can be reported using the whistleblowing system, via the applicable LkSG complaints process, or to an ombudsperson.

#### Metrics relating to the workforce's human rights

In 2024, 3 incidents of discrimination or legal action regarding AGG were registered across the group. This figure included legal action and justified complaints received by entities in the DZ BANK Group or competent authorities through a formal process where there was an accusation of a violation of human rights or breaches of the prohibitions listed in section 2 (2) LkSG that were identified by the entities through established processes. The established processes for identifying violations are management system audits, formal monitoring programs, and grievance mechanisms. Only justified incidents reported using formal and established channels were included. Incidents comprise all cases of violations of human rights that were documented centrally in the LkSG complaints process and in which employees of the DZ BANK Group are directly involved.

In 2024, 5 formal complaints regarding violations of human rights were made via the whistleblowing system or the LkSG complaints process. No complaints were submitted to the national contact points for OECD multinational enterprises. The complaints process enables people to report indications of human rights-related and environmental risks and of incidents of human rights violations. The reports are submitted through official channels of the entities in the DZ BANK Group or national contact points in relation to the entities' own workforces. Only justified complaints reported through formal and established grievance offices were included.

The total amount of material fines, penalties, and compensation for damages as a result of incidents and complaints was €0.00. The total amount of fines, penalties, and compensation for damages in the DZ BANK Group is reflected in section C under 'Other net operating income' in the consolidated financial statements. A fine is an amount of money paid after a violation of human rights. Penalties are punitive measures that may be imposed in the event of non-compliance with standards or a breach of legal requirements. Compensation for damages is an amount of money paid as redress to the affected person after a violation of human rights.

The number of severe human rights violations and incidents involving employees was 0.

The number of severe human rights violations and incidents involving employees in which the UN Guiding Principles and OECD Guidelines were not complied with was 0.

The total amount of fines, penalties, and compensation for damages as a result of severe human rights-related incidents was €0.00. The total amount of fines, penalties, and compensation for damages in the DZ BANK Group is reflected in section C under 'Other net operating income' in the consolidated financial statements. To record the aforementioned data, the total numbers of complaints and incidents and the total monetary amounts during the reporting year in the DZ BANK Group were counted.

### 3.3 Workers in the value chain (S2-1, S2-2, S2-3, S2-4, S2-5)

#### Brief summary

- Targets, policies, actions, and processes relating to workers in the business portfolio
- Overview of the various instruments for carrying out checks in the lending process, such as exclusion criteria and the group credit standard

The materiality assessment for the DZ BANK Group deemed both the group's own employees (see chapter VII.3.2) and the workers in the supply chain immediately downstream to be material (see chapter VII.3.1).

The DZ BANK Group entities employ a range of instruments aimed at mitigating potentially adverse impacts on people and the environment and limiting potential risks for the group. In the context of the immediately downstream value chain, these instruments primarily include exclusion criteria and the group credit standard on the consideration of risks associated with ESG factors (see chapter VII.2.3.1).

#### Targets relating to workers in the value chain

Due to its business models in the financial sector, the DZ BANK Group has not implemented any measurable, outcome-oriented targets for tracking the effectiveness of policies and actions related to workers in the value chain. A new strategy may be considered in the future. There are no financial resources for managing material impacts.

#### Policies relating to workers in the value chain

In its **group credit standard** on the consideration of risks associated with ESG factors in its management units, the DZ BANK Group has defined **exclusion criteria** that must be applied to every loan application before the loan is approved.

The DZ BANK Group's **exclusion criteria** include violations of human rights and labor rights. Under the group credit standard, companies are excluded that demonstrably contravene internationally recognized standards of human rights and labor rights. Internationally recognized standards are the UN Global Compact, the UN Guiding Principles on Business and Human Rights, and the ILO's fundamental conventions (see chapter VII.2.3.1). The exclusion criterion for trade in conflict materials relates to funding for trade activities involving materials extracted in conflict regions by a conflict party in a way that violates human rights, and which may be used to finance the conflict, for example.

DZ BANK (in accordance with the credit policy for factoring in ESG risks) also applies further sector-specific requirements – **sector criteria** – for certain industries that are particularly vulnerable from a sustainability perspective. These criteria specify the details to be reviewed with reference to international industry-specific conventions, recognized standards and certification, and optimum production processes. There is a clear recognition when dealing with customers/business with a connection to palm oil or in the commodities sector that special care and precautions are required to avoid negative impacts on human rights (see chapter VII.2.3.1).

In the **credit check process**, all large-scale project finance transactions that are subject to the Equator Principles are checked in a standardized manner with regard to topics such as working conditions and complaints processes (see chapter VII.3.4).

In addition to applying the exclusion criteria and sector criteria, DZ BANK uses instruments for measuring customers' ESG-induced credit risk (**ESG credit risk scorecard**) and the ESG-induced reputational risk for DZ BANK (**RepRisk ESG checklist**) in the credit check process. The rules on taking account of ESG aspects in credit check processes encompass processes for the extension of loans, the monitoring of loans, and the valuation of collateral.

DZ BANK's **ESG credit risk score** supplements the credit rating for corporate customers used in lending and loan monitoring by providing an additional relative statement on creditworthiness with respect to ESG risks (see chapter VII.2.3.1). The subscore for the social dimension evaluates factors such as human rights violations, marginal employment, occupational health and safety, corporate volunteering, diversity, and integration. Currently, the evaluation is sector-specific and based on the counterparty's risk sector and risk country.

The **RepRisk DZ BANK ESG checklist** used by DZ BANK contains up to 16 questions that examine the environmental (see chapter VII.2.3.1), social, and corporate governance dimensions in equal measure and analyze customers' general engagement with these dimensions. In connection with the social dimension, specific questions are asked about respect for human rights within the company and about risks relating to social aspects in customers' supply chains (violations of human rights and labor rights by subcontractors or suppliers). The RepRisk ESG checklist's findings are depicted on a four-level scale that ranges from neutral/green (neutral impact on the DZ BANK's reputation) to high/red (strong negative impact on DZ BANK's reputation). Loan applications with an elevated or strong ESG-related negative reputational impact must be documented accordingly and forwarded to a higher authorization level for approval.

At DZ BANK, the findings from application of all of the ESG tools (check against exclusion criteria and sector criteria, RepRisk DZ BANK ESG checklist, ESG credit risk score) are factored to varying degrees into the separate **ESG vote within the loan application process**. The aim is to provide decision-makers with a clear overview of customers' ESG aspects so that they can be taken into account in the lending decision. Especially where elevated risk is identified, whether from a reputational risk or a credit risk perspective, customers' specific problems must be investigated in order to analyze potential mitigation measures (see chapter VII.2.3.1). In the event of a breach of exclusion criteria, for example a human rights breach that can be linked to the customer, the loan application is not pursued any further. Currently, no loans are rejected based solely on ESG factors.

DZ HYP has its own checklist that it uses to find out about ESG reputational risk in respect of its funding projects.

Furthermore, DZ BANK's **sustainability research** uses a scoring model with integrated screening to assess countries, companies, and banks against ESG criteria for any controversies or reasons for exclusion. This ESG analysis model classifies the analyzed issuers as either sustainable or not sustainable. The analysis takes account of exclusion criteria and any severe ESG controversies. The presence of any hard exclusion criteria, such as a violation of fundamental human rights, automatically results in a classification as not sustainable. Issuers that have been classified as sustainable are awarded the DZ BANK seal of approval for sustainability and are identified as sustainable issuers in research publications.

These policies are directly linked to the material topic of workers in the value chain, plus the related IROs. Through the aforementioned policies, the DZ BANK Group has implemented suitable rules with the aim of avoiding negative impacts on workers in the value chain. At the same time, the financing activities based on these rules can have positive impacts on workers in the value chain, for example by safeguarding jobs.

In order to maximize the opportunities presented by higher demand for ESG products, suitable **programs and bonds** have been created in the DZ BANK Group that, among other things, also take social aspects into account and support them (see chapter VII.3.4).

#### Actions relating to workers in the value chain

Beyond **implementing and adhering to the aforementioned policies and instruments**, no further actions have been taken for workers in the downstream value chain.

**Adhering to and checking the exclusion criteria** when entering into transactions is generally intended to avoid the occurrence of negative impacts regarding human rights. If negative impacts on human rights are

identified in the business portfolio in the context of ongoing business relationships, DZ BANK evaluates the options at its disposal to exert influence on the customer and, depending on the case at hand, decides on remedial action.

#### Processes and channels relating to workers in the value chain

The DZ BANK Group does not have any separate processes in place for engaging with workers in the downstream value chain with regard to impacts. Those affected can submit their concerns and requirements regarding impacts that affect them to the DZ BANK Group's general contact address (see chapter VII.3.2.6 and chapter VII.4.3).

### 3.4 Affected communities (S3-1, S3-2, S3-3, S3-4, S3-5)

#### Brief summary

- Targets, policies, and actions relating to affected communities in own operations and the business portfolio, such as the sector criteria for lending and investments in social bond transactions, and other social and cultural activities
- Processes and channels for engaging with affected communities, such as the LkSG complaints process

With regard to its activities, the DZ BANK Group takes its own workforce, workers in the value chain, and affected communities into account. In particular, this includes communities in locations where loans have been granted (business portfolio) and where the DZ BANK Group has offices (own operations). DZ BANK can have an impact on the habitat in which these communities live. These communities include, for example, local residents or indigenous populations that are deemed to be a vulnerable group because they are affected. Material opportunities arise from positive effects on residents as a result of training and jobs being provided (see chapter VII.3.2.1). Material risks affecting vulnerable groups occur, for example, in connection with lending in the agriculture, palm oil, and dam project sectors where there is an increased likelihood of negative impacts on indigenous populations. Information about management of the DZ BANK Group's impact on affected communities is provided below, firstly in respect of the business portfolio and then in respect of own operations.

#### Targets relating to affected communities

Due to its business models in the financial sector, the DZ BANK Group has not implemented any measurable, outcome-oriented targets for tracking the effectiveness of policies and actions related to affected communities. A new strategy may be considered in the future.

#### Policies relating to affected communities

In its business portfolio, DZ BANK is guided by its **sector criteria for lending activities**. For example, DZ BANK acknowledges the **recommendations of the World Commission on Dams (WCD)** and therefore does not provide funding to any dam projects that do not apply the WCD's recommendations as fully as possible. Among other things, customers must prove that they recognize the rights of people affected by the dam and ensure that the benefits are shared equitably (see chapter VII.2.3.1). The **ESG checklist** is also applied in the credit check process, which involves evaluating the impact of financed business activities on indigenous population groups, local residents, etc. (see chapter VII.3.3).

DZ BANK also recognizes that special care and precautions need to be taken in the commodities sector because of political, environmental, and social sensibilities. Particularly in the oil & gas and metals & mining sectors, it is guided by **international conventions** and makes reference to best practice (see chapter VII.2.3.1). The World Bank and industry associations provide examples of best practice at regional level. Financing decisions specifically take account of respect for human rights and give particular consideration to the interests of indigenous people and local communities (see chapter VII.3.2.6).

When dealing with customers or conducting business where there is a connection to palm oil, DZ BANK recognizes that special care and precautions are required to avoid negative impacts on human rights, for example. For this reason, it links the financing of companies in the palm oil value chain to minimum requirements such as adherence to the principles of free prior and informed consent (FPIC) for the purchase of land in regions with an indigenous population. These requirements are set out in the **sector criteria** (see chapter VII.2.3.1).

These policies are directly linked to the material topic of affected communities, plus the related IROs.

#### Actions relating to affected communities

DZ BANK invests in **social bond transactions** on an ongoing basis, in some cases to encourage lending, for example in social housing, and to support other social projects. In this context, attention is paid to compliance with recognized standards such as the World Bank Sustainable Development Framework and the sustainable development goals.

To implement the International Finance Corporation (IFC) Performance Standards, the **Equator Principles** are applied in eligible project finance transactions, as they are a mandatory standard in this context. DZ BANK has subjected project finance with a total investment volume of more than USD 10 million and project-specific corporate finance with an investment volume of more than USD 50 million to an assessment in accordance with the Equator Principles since it signed up to the principles in 2013. Depending on their level of environmental and social sustainability, DZ BANK assigns funding projects to one of the following categories: A (potentially significant adverse environmental and social impact), B (potentially limited adverse environmental and social impact), or C (low or no adverse environmental and social impact).

In its corporate customer business, DZ HYP supports affordable housing by providing **finance**, such as for **housing sector projects**. The home-building companies include cooperative, municipal, and church housing companies, along with other members of the Bundesverband deutscher Wohnungs- und Immobilienunternehmen e.V. (GdW) [German Housing and Property Companies Association]. DZ HYP provides advice on funding products from Germany's KfW development bank and acts as its house bank.

The aforementioned actions are aimed at the ex ante prevention of risks and negative impacts on affected communities.

In the view of the DZ BANK Group, cooperatives operate in a sustainable and responsible manner. They help to put innovative ideas into practice, support their members, and are firmly rooted in their region. The Cooperative Financial Network's sustainability guidelines highlight the positive impact of cooperative practices on society in the context of the current challenges of sustainable development, while the entities of the DZ BANK Group are committed to the common good. They support a wide range of corporate citizenship activities in their communities by providing resources, such as donations, for managing material impacts on affected communities, and through foundations and employee initiatives.

For example, trainees at DZ BANK set up the **corporate volunteering initiative LokalSozial** in May 2019 to support local communities and charitable projects. They regularly help out at the Frankfurt food bank and organize food donations. DZ BANK shows its appreciation of the trainees' commitment by allowing them to volunteer during working hours. Financial assistance was provided to children in need and their families through donations to a variety of charitable organizations that support children, namely Frankfurter Kinderbüro, Düsseldorfer Kindertafel, Stiftung Kinderhilfzentrum Düsseldorf, and the Düsseldorf branch of Deutscher Kinderschutzbund.

DZ BANK also supports a range of **cultural charitable foundations**, including local initiatives such as the MMK foundation – Museum für Moderne Kunst and Städtischer Museum-Verein e.V. In September 2020, the Board of Managing Directors of DZ BANK established the DZ BANK Art Foundation as a charitable body with

the aim of opening up access to the bank's art collection (founded in 1993) to a wider public. The Art Foundation is one of the ways in which DZ BANK demonstrates its social responsibility. At the same time, it is making the foundation an element of its corporate culture by providing support for works of art, providing accompanying learning programs, and displaying the art for the public to see free of charge. The Art Foundation grew out of DZ BANK's extensive collection, which focuses on photographic art from 1945 until the present day. Every other year, the Art Foundation offers a support grant for which artists of any age can apply who are working on photographic forms of expression that break the boundaries of the medium.

DZ BANK, R+V, and UMH provide ongoing support to the **non-profit initiative Joblinge e.V.**, which aims to help disadvantaged teenagers and young adults to enter the labor market. Employees volunteer on site as mentors for the young people, helping them to find places on training schemes, complete their applications, and prepare for their new jobs.

DZ BANK and other entities in the DZ BANK Group have been supporting the work of the **Aktive Bürgerschaft** [active citizenship] charitable foundation for decades. DZ BANK is represented on the **foundation's governing board and advisory board**. The Aktive Bürgerschaft foundation has been the center of excellence for civic engagement in the Cooperative Financial Network for more than 25 years. It is the support organization for more than 420 citizens' foundations in Germany. Across the country, it helps their voluntary committees to secure benefactors and assets, put a committee succession plan into place, adopt digital technologies, and carry out other strategic management tasks. One of its special projects is the 'sozialgenial – schoolchildren get involved' initiative, and more than 130,000 young people at 1,000 schools have heeded the call to get involved so far. The schoolchildren use sozialgenial during lessons to develop their own volunteering ideas. The project aims to reach children of all backgrounds, help them to develop their individual skills, and strengthen democratic attitudes and values.

The **Schwäbisch Hall foundation** 'bauen – wohnen – leben' promotes initiatives relating to homes and home-building and provides fresh ideas on subjects such as infill development and intergenerational cohesion. The R+V foundation focuses on civic engagement, young people, and education. Deutschland im Plus, the charitable foundation established by TeamBank, has been championing financial literacy and helping to prevent people from getting into too much debt since 2007, while the UMH Foundation concentrates on education, community, climate action, and sustainability. The Vordertaunus citizens' foundation, an initiative of VR Smart Finanz, has been supporting disadvantaged young people in the region since 2013. Furthermore, VR Payment supports the local women's soccer team of Eintracht Frankfurt and the Skywheelers Frankfurt.

#### Processes and channels relating to affected communities

The DZ BANK Group does not have any processes for engaging with affected communities with regard to impacts.

DZ BANK, BSH, TeamBank, and R+V have developed **LkSG complaints processes** that allow affected people and representatives of local communities to report human rights-related and environmental risks and violations of human rights-related and environmental obligations (see chapter VII.3.2.6 and chapter VII.4.3).

There is no direct collaboration with affected communities or their legitimate representatives, but the perspectives of affected communities are taken into account. They can communicate their concerns to DZ BANK using **complaints channels** and other mechanisms. When adapting its exclusion criteria and sector criteria in the lending business and the Treasury division's own-account investments, DZ BANK considers the perspectives and recommendations of NGOs that are representing the interests of materially affected communities. An interdepartmental working group is responsible for adapting the exclusion criteria and sector criteria. The working group develops proposals for updates based, for example, on comments from NGOs, complaints, and existing risks and then presents them to the Credit Committee for a decision. In the case of particularly vulnerable sectors, care is taken to ensure that the affected communities can present their concerns in accordance with the FPIC principle. Besides these individual actions in respect of particularly vulnerable sectors, however,

there is no overarching process for ensuring that the affected communities are aware of, and trust, the structures and processes.

#### Metrics relating to affected communities

The DZ BANK Group believes that its strategies for respecting human rights meet international standards (see chapter VII.3.2.6). These strategies also apply in relation to affected communities, including indigenous populations.

No cases of non-respect of the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, or the OECD Guidelines for Multinational Enterprises that involve affected communities were reported during the reporting period.

### 3.5 Customer focus (S4-1, S4-2, S4-3, S4-4, S4-5)

#### Brief summary

- Reporting on targets, policies, actions, and processes relating to consumers and end-users in the business portfolio
- Disclosure of information on the following customer groups: investors, policyholders, borrowers (consumer finance and real estate finance), and home savings customers

The DZ BANK Group regards it as its duty to support the cooperative banks in their business with consumers and end-users so that cooperative banks, irrespective of their size, can offer consumers and end-users access to the full spectrum of financial services providers. The DZ BANK Group thereby wishes to play its part in ensuring the availability of a wide range of financial products and services, including in rural areas. To this end, it makes products available that the cooperative banks sell to their customers. In some cases, group entities maintain direct business relationships with consumers and end-users. From the perspective of financial services providers, consumers and end-users include securities investors, policyholders, consumer finance borrowers, real estate finance borrowers, and home savings customers. In its marketing activities, the DZ BANK Group also considers accessibility in relation to vulnerable groups. Insights into the perspectives of particularly vulnerable consumers and end-users can be gained by using specific processes and channels (see chapter VII.3.5.1, chapter VII.3.5.2, chapter VII.3.5.3, and chapter VII.3.5.4). Besides these individual actions, however, there is no overarching process for ensuring that consumers and end-users are aware of, and trust, the structures and processes.

The entities of the DZ BANK Group are interested in building long-term relationships with their customers based on a spirit of partnership. That is why they not only communicate transparently but also carry out credit checks to prevent customers from becoming overindebted and offer flexible loans that can be adapted if necessary.

In its group credit standard on the consideration of risks associated with ESG factors in the DZ BANK Group, the DZ BANK Group has defined sector-specific exclusion criteria that must be applied to every loan application before the loan is approved (see chapter VII.2.3). This is aimed at prohibiting transactions that do not meet the minimum criteria in relation to environmental, social, and corporate governance (ESG) aspects or that are associated with an increased risk of reputational damage to the DZ BANK Group. Among the excluded industries are arms trading, arms production, business connected with pornography or prostitution, and controversial gambling. In addition, it is prohibited to maintain business relationships with customers if significant violations of human rights or breaches of environmental standards cannot be ruled out.

The entities in the DZ BANK Group use a variety of concepts to ensure service quality and to record and process customer complaints. How these concepts are designed in detail depends on the specific business models

and activities of the individual entities and their sometimes different target groups. The DZ BANK Group has not issued any centralized guidance on quality assurance and complaints management.

### 3.5.1 Investors

#### Targets relating to investors

No measurable, outcome-oriented targets have been implemented for tracking the effectiveness of policies and actions related to investors.

#### Policies relating to investors

DZ BANK must meet the **statutory requirements regarding product governance** by ensuring that securities products are developed in the best interests of consumers and end-users. DZ BANK aligns the product offering (especially advisory products with a subscription period) with the market-related expectations of its Research division in the interest of its customers. By doing so, DZ BANK ensures that the product margins are appropriate and the complexity of the products is limited. DZ BANK and DZ PRIVATBANK prepare key information documents (KIDs) to make the products more understandable for consumers and end-users and to allow them to be compared with other products. DZ BANK defines target markets to make it easier for salespeople to offer the products to the consumers and end-users for whom they were developed. The fundamental quality standards for product development and sales are defined in the **product guidelines** adopted by the entities of the DZ BANK Group.

All group entities also have **data protection policies** in place. These include guidelines, procedural instructions, and other written provisions relating to data protection. The purpose of these policies is to protect personal data and the privacy of individuals. They set out rules and requirements designed to avoid the misuse of data and safeguard the rights of data subjects. In accordance with GDPR requirements, information about the processing of consumers' and end-users' personal data is also provided in a privacy notice on websites and on the corporate intranet. Mandatory training and other control mechanisms are in place with the aim of ensuring compliance with the policies (see chapter VII.4.3). The policies are the responsibility of the relevant Boards of Managing Directors, while the data protection officers are tasked with implementation and enforcement.

Besides the statutory requirements, UMH follows the voluntary principles set out in the **rules of conduct of the Bundesverband Investment und Asset Management (BVI) [German Investment Funds Association]**.

DZ PRIVATBANK integrates the **analysis of sustainability aspects** as a key element of **investment strategies** in independent asset management. Among other things, a best-select approach combined with exclusion criteria is used across all asset classes. Financial risks linked to sustainability are taken into account in the risk-controlled investment process and are factored into the value-at-risk (VaR). Sustainability is considered from the outset along the entire value chain of independent asset management, including transparency in pre-contractual information, a comprehensive set of rules regarding sustainability criteria in investment decisions, and periodic ESG reporting and a final assessment of the potential returns by portfolio managers.

DZ PRIVATBANK's **business strategy** draws on many years of experience in looking after customers who attach importance to adhering to ESG criteria. Having begun with church investors that were involved in designing ethical and sustainable investment solutions, DZ PRIVATBANK offers investment options for sustainability-minded customers with a wide variety of preferences. DZ PRIVATBANK has steadily expanded the capacity of its IT systems and of its workforce in order to optimize the way in which ESG factors are taken into account in the sustainable investment process and broaden its portfolio of asset management products. DZ PRIVATBANK signed up to the **Principles for Responsible Investment (PRI)** in autumn 2021.

These policies are directly linked to the material topic of consumers and end-users, plus the related IROs.

#### Actions relating to investors

The inadequate provision and communication of high-quality information to customers and to consumers and end-users can lead to missed business opportunities, loss of customers, and potential reputational risk. Extensive action is taken and appropriate instruments deployed to counter this.

The **officer for the protection of customers' financial instruments** is responsible for ensuring that DZ BANK and its service providers meet the regulatory obligations with regard to the protection of DZ BANK customers' financial instruments and ring-fenced funds.

The DZ BANK Group has a **compliance function**. Its main task is to identify, manage, and mitigate compliance risk in order to protect consumers and end-users against breaches of legal provisions and requirements (see chapter VII.4.3).

DZ PRIVATBANK offers customers 5 strategy families in the sustainable investment sphere on an ongoing basis, resulting in more than 10 sets of investment guidelines that fall into the 'sustainable pursuant to article 8' category. The product range includes fund solutions as well as securities account solutions. Detailed information on the strategy families is available on DZ PRIVATBANK's website under 'Nachhaltig Investieren' (sustainable investment). The sustainable investment process is used in all asset management strategies, including ones that are not designated as sustainable. The calculated sustainability ratios are used when ascertaining sustainability preferences.

#### Processes and channels relating to investors

The majority of the DZ BANK Group entities are bound by the statutory requirements for **complaints management**. Any expression of dissatisfaction by a consumer or end-user is considered a complaint. The aim is for the consumer or end-user to receive a response within a reasonable period of time in which the options for making a complaint are explained. If a consumer's or end-user's request is not met, they are informed of the dispute resolution options (not applicable to R+V). Like complaints from other stakeholders, shareholder complaints are processed too (see chapter VII.3.2.6). The websites of the DZ BANK Group entities provide relevant information for customers. To provide protection from retaliation, the declaration of principles sets out policies that aim to ensure that consumers and end-users do not suffer any negative consequences as a result of their complaint, except where it is proven that they have intentionally misused the complaints management system. Again, the same principles apply to shareholders as to other complainants. Beyond this, no standardized process has been established as a way of assessing whether customers are aware of and sufficiently trust the structures and processes for expressing their concerns and needs.

DZ BANK's **customer dialogue center** is the point of contact for customers' securities business. From the perspective of DZ BANK, the experts working in the center create a sense of trust and partnership with the aim of ensuring a lasting positive customer experience. The focus is therefore on transparent and honest communication, so that customers always receive all relevant information. A range of services tailored to customers' individual needs is designed to offer maximum flexibility and is available over the phone or through the chat function. Customer satisfaction is to be increased by continually improving the service channels and ensuring excellent availability.

UMH and DZ BANK primarily sell their products to consumers and end-users through cooperative sales partners in Germany and Austria. The representatives are asked about their satisfaction during regular **surveys by the sales banks**. UMH carries out a survey every year, DZ BANK every 3 years. The management level immediately below the Board of Managing Directors is responsible for the satisfaction surveys.

#### Metrics relating to investors

There were no cases of non-respect of the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, or the OECD Guidelines for Multinational Enterprises that involved investors that were consumers and end-users during the reporting period.

### 3.5.2 Policyholders

#### Targets relating to policyholders

The quality of advice policy at R+V provides the basis for **R+V's quality of advice target in respect of individuals and companies**. The aim is to improve the quality of advice provided to retail customers by giving advisors clear targets. By fulfilling these targets, the advisors help to satisfy the customer-related duty to inform, explain, and clarify.

In respect of the quality target, advisors are expected to reach a defined target value regarding advice quality points and to conduct a certain number of annual reviews within a calendar year. Each advice quality point (no more than 2 per customer meeting during a year) is documented in the R+V Connect tool and each annual review is documented in the Quality of Advice for Companies tool, with all mandatory fields completed in full.

The targets are based on empirical values and, in respect of individuals, are based on reaching 80 advice quality points per year. The targets for the annual reviews depend on the specific advisor group: small business customer advisors: 25 annual reviews per year; target customer advisors: 30 annual reviews per year; corporate customer advisors: 35 annual reviews per year; large corporate customer advisors: 25 annual reviews per year.

The results are factored into the bonuses, with the aim of ensuring adherence to quality standards. Monthly reporting in R+V Connect and on the basis of the business and bonus system evaluations ensures that target achievement is tracked and monitored. The targets are set on an ongoing basis in collaboration with the relevant sales departments and reviewed annually. While customers are not directly taken into account when setting targets, their feedback is factored into the evaluation and adaptation of advisory processes via anonymized requests for feedback.

These targets are directly linked to the material topic of consumers and end-users, plus the related IROs. This metric is not validated by an external body.

#### Policies relating to policyholders

The **R+V quality of advice (BQ)** policy ensures that R+V attaches a high priority to its customers and their needs. R+V quality of advice provides customers with a clear picture of their individual risks and action areas by preparing a bespoke situational analysis, including product recommendations, on the basis of the details provided by the customer. Keeping customers informed by offering high-quality advice and fulfilling the duty to inform, explain, and clarify can have a positive impact on customers and their satisfaction levels. The Sales Development department in the Customers & Sales division is responsible for the R+V quality of advice policy.

From the perspective of the DZ BANK Group, the **guidelines for sustainable product standards** at R+V are an important element of the product management process. The guidelines are intended to provide a framework for developing and adapting products, thereby ensuring that they meet the regulatory requirements and sustainability-related requirements. They offer guidance on introducing new products and, where possible, making changes to existing products. They also help with systematically integrating sustainability targets into the product management process and implementing them across the company. The applicability of the guidelines is checked when products are being developed. In view of climate change, the key points in the guidelines are 'safety through prevention' and 'rewarding risk-mitigating behavior'. Responsibility for the guidelines for sustainable product standards lies at Board of Managing Directors and head of division level in the non-life insurance business.

The **omnichannel strategy** is aimed at all customers and constitutes R+V's customer and marketing strategy. The core aim of the strategy is being able to address and support the right customers at the right time, via the right channel, and with the right insurance products. The omnichannel product guidelines are a core element of the omnichannel strategy and cover the pre-packaging of the product offering – both cross-channel and

channel-specific – and optional modules for customizing offerings. A wide range of product modules can be pre-packaged using product lines (classic, comfort, and premium). Implementation of the omnichannel strategy is managed using internal departmental reporting. Customer Management and Marketing within the Customers & Sales division is responsible for this strategy.

These policies are directly linked to the material topic of consumers and end-users, plus the related IROs.

#### Actions relating to policyholders

R+V developed its **Quality of Advice for Individuals (BQ Individuals) and Quality of Advice for Companies (BQ Companies)** software applications in order to facilitate precise and comprehensive advice. The aim of this action is to help advisors to prepare end-to-end and ad hoc advisory concepts in order to reduce the risk of error and raise the quality of advice. Using the BQ Individuals (since 2024) and BQ Companies (since 2022) applications, R+V strives to provide new and existing customers with clear information about their insurance situation and to determine their insurance and pension requirements.

The effectiveness of the action is tracked and evaluated using the technical **measurement logic in the BQ Individuals application**. This measurement logic checks whether the advisory documentation regarding one or more topics was emailed to the customer. If they have given their prior consent, customers also receive an integrated, anonymized feedback form. R+V's aim is to use the feedback to draw general conclusions about the quality of advice and customer satisfaction and to continually improve the advisory processes.

When using the **BQ Companies** application, it is important to R+V to review the customer's situation so that any necessary adjustments to the insurance cover can be made in good time. That is why up-to-date data on the customer's own operations is collected during a technology-supported annual review. The conducting of this annual review is documented by means of a technical, fully automated measurement.

The customer-focused approach taken in the R+V advisory process and the use of digital advisory tools are designed to ensure that no incorrect or contradictory information is conveyed as part of the advice provided. Remedial action is recorded through detailed documentation of advisory meetings and the option of electronic archiving and review.

In its occupational health insurance business (bKV), R+V introduced the **R+V HealthBenefits service program**. The aim is to offer customers free supplementary services (healthcare telephone hotline, interactive service platform, R+V Family Coach, R+V BestSpecialist) that go beyond the scope of the insurance benefits. R+V HealthBenefits support customers in their day-to-day working and home life and can contribute to their health. The healthcare services offered in connection with R+V HealthBenefits cover a range of areas, including medical advice, a search function for finding hospitals and specialist doctors, and preventive health initiatives. This action includes information events for brokers to ensure that, from the perspective of R+V, their knowledge is up to date so that they can provide the best possible advice. The effectiveness of this action is ensured by providing and updating the healthcare services in accordance with the situation in the healthcare market and R+V's line of business. Use of the services is checked at least once per year.

To implement the requirements of the German Accessibility Improvement Act (BFSG), R+V set up a BFSG task force in 2024 that focuses on making the company's digital systems accessible. The actions being taken in relation to digital accessibility comprise the accessible design of all **online customer processes for taking out insurance**, the adaptation of digital content, the accessible design of end-customer portals, and the provision of accessible PDF documents. To implement the accessibility requirements, the BFSG task force is working with representatives of the various departments and the business owners of R+V's Agile Release Trains to achieve the common goal through long-term interdisciplinary collaboration. The product management team makes sure that the BFSG information sheet is produced/revised when products are developed or updated. The plan going forward is to track the effectiveness of the actions using checks, feedback from stakeholders, and the analysis of usage data.

R+V has implemented data protection procedural instructions in its Sales division and in its non-life insurance, inward reinsurance, and personal insurance business. **Data protection procedural instructions** have been developed for the Sales division in order to ensure compliance with GDPR and the relevant rules in the code of conduct of the Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV) [German Insurance Association], and thus protect the personal data of R+V's customers. The aim is to standardize, and provide transparent information about, the internal data protection process in order to contribute to customers' security and safety and to strengthen data subjects' and the public's confidence in the integrity of the data processing processes. The departments in the non-life insurance, personal insurance, and inward reinsurance business have each developed procedural instructions that vary in terms of, for example, retention rules, erasure deadlines, and adjustments to contracts with regard to anonymization and the transfer of the duty to inform.

#### Processes and channels relating to policyholders

The **net promoter system** measures customer satisfaction. After relevant contact with R+V, customers are asked for their feedback. It is used to critically examine and improve actions, products, and processes. The effectiveness of the actions taken in response to end-user feedback is reflected in the upwards trend in the Net Promoter Score. The feedback is obtained in one of 2 ways, depending on whether the contact is inbound or outbound. In the case of outbound contact, for selected contacts (including online), customers are asked to complete an online questionnaire directly, e.g. by means of a pop-up window or a QR code on a letter. In the case of relevant inbound contact, customers are asked for their feedback afterwards, e.g. after a claim has been settled, a policy has been amended, or a new policy has been taken out. Customers are asked to participate during a telephone call or in an email or text message containing a link to an online questionnaire. The Brand, Product, and Customer Management department in the Customers & Sales division is responsible for the net promoter system.

**User experience (UX) / user interface (UI)** is a holistic approach that encompasses everything that users experience when using a product or service. The focus is on understanding users' behavior, needs, and motivation, which is gauged from interviews, surveys, usability evaluations, and other user research methods that involve the users. The goal is to improve how users experience products, services, and processes by incorporating experimental and observational research methods that guide the design, development, and refinement of a product. Actions are derived from this that are aimed at improving products for customers and developing them in line with customer requirements. The findings feed into the relevant decision-making processes in the departments. Finally, user interfaces are designed with the aim of ensuring compliance with the UX/UI standards. This is done by directly involving customers, for example through interviews and user tests. The type and frequency depend on the particular topic and are decided upon by the relevant UX professionals who carry out the UX methods. Responsibility lies both with the digital.workshop department in the Digitalization and Operational Processes division and with the User Experience Design group in the Digital Customer Applications department. Vulnerable people are always taken into account when delivering accessibility, for example by observing them, and suitable user interfaces are developed accordingly.

R+V has set up a **direct complaints management** function. This is a formalized process that customers can use to express their concerns and make complaints. The aim is to identify and counter any negative impacts that customers experience.

R+V provides customers with relevant information on its website. Customers can submit their complaints by telephone, email, mail, or fax or by contacting the field sales force directly. The website also has a list of external points of contact for customers, such as insurance ombudspersons and BaFin.

A 'praise and complain' section of the **Meine R+V portal** [my R+V portal] gives customers the opportunity to express criticism anonymously or contact the technical service department. Complaints can be submitted digitally on the R+V portal or by calling the **service hotline** of R+V Service Center GmbH. After receiving a message, R+V Service Center GmbH examines whether it needs to be forwarded to the responsible department. No standardized remedial action is taken; instead, the action to be taken is decided upon based on the matter

at hand. R+V provides customers with all relevant information (service hotline numbers and contact details) in the 'help and contact' section of the R+V customer portal. Registered customers can access this information at any time.

Customers can use **social media**, such as Facebook, Instagram and TikTok, to submit inquiries and to give praise or criticism. Supported by an external service provider, R+V's social media team answers all questions received via social media. Furthermore, inquiries about insurance claims are handled by R+V Service Center GmbH in Münster or, in the case of specific questions on matters requiring specialist expertise, by the relevant department. As R+V uses external social media, it does have influence over the creation of R+V profiles but cannot directly influence the availability of the platform (e.g. Facebook).

Every complaint must be documented and, where possible, dealt with within 3 days of receipt. The departments' direct complaints management functions are checked at least once per year in order to ensure adherence to the principles of complaints handling. There is also an indirect complaints management function whose purpose is to make sure that complaints are handled in accordance with the internal rules and that the lessons learned from complaints are used to optimize business and process quality. To this end, **internal complaints reports** are produced that include an evaluation and analysis of the complaints received. An annual complaints report is also submitted to BaFin. Independently of the internal reviews, BaFin schedules and performs additional supervisory checks on complaints management as part of its insurance supervision obligations.

#### Metrics relating to policyholders

There were no cases of non-respect of the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, or the OECD Guidelines for Multinational Enterprises that involved policyholders that were consumers and end-users during the reporting period.

### 3.5.3 Consumer finance borrowers and real estate finance borrowers

#### Targets relating to consumer finance borrowers

No measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to consumer finance borrowers.

#### Policies relating to consumer finance borrowers

TeamBank has implemented policies to make processes and workflows efficient and customer-focused. It reviews their content at least annually to check that they remain up to date.

The **trademark rights policy** defines the processes, workflows, and monitoring system – particularly those for monitoring the extension of protection periods – that are needed for the effective protection of TeamBank's trademark rights. The main function of a trademark is to indicate the origin of the trademarked goods or services to consumers and end-users by enabling them to clearly distinguish them from goods and services of a different origin. This policy relates to own operations and is focused on TeamBank's end-customers. Responsibility for the policy lies with the Head of Brand & Customer Experience.

The **design policy** obliges the development teams to follow the design rules from the design system when developing and updating software user interfaces (front ends). This does not apply to applications without a customer and/or partner user interface. The purpose of the design system is to help the development teams to create a consistent user experience on all platforms and devices and thus speed up development as a result of using pre-prepared design elements. Responsibility for the policy lies with the Head of Brand & Customer Experience.

The **complaints management policy** governs the handling and consistent treatment of expressions of dissatisfaction by customers in respect of a product, organization, action, or employee of TeamBank. These include complaints pursuant to LkSG. Complaints management is aimed at ensuring prompt and recipient-oriented responses to customer complaints, thereby helping to improve customer loyalty, the market focus of products, and TeamBank's reputation. The policy is binding on the employees of TeamBank in Germany and Austria. Responsibility for the policy lies with the Head of the Dialogue Center.

These policies are directly linked to the material topic of consumers and end-users, plus the related IROs.

#### Actions relating to consumer finance borrowers

TeamBank has established actions for continually improving the customer experience and increasing brand appeal.

The organization focuses on customers' needs during the **customer journey**. The customer journey is divided into 5 stages, and employees' expertise relating to the products and services is grouped accordingly. Societal shifts are incorporated when refining products and services by identifying **persona clusters** within the sinus milieu. This helps with the definition of TeamBank's core target groups and development of targeted actions. In addition, regular surveys of **customer needs** are intended to ensure that all products and services are aligned with what customers actually require.

As part of the **experience audit**, regular checks are carried out throughout the customer journey. The audit involves obtaining direct feedback from customers to gain insights into their expectations and identify where to start improving products and services. Within the organization, the **experience coordinators** create transparency in respect of the brand and customer experience. Training and regular meetings help employees to gain an even better understanding of customer needs.

The **eKomi** app is used to collect customer feedback and reviews within the app's order process on an ongoing basis. The feedback and reviews enable adjustments to be made at short notice. In addition to eKomi, the other established formats for obtaining customer feedback are **interviews, user testing, communities, and customer conferences**. The **customer conference** is an event to which customers are invited so that they can discuss products and services in person. This helps TeamBank to gain a better understanding of customers' needs and expectations.

Customers' willingness to recommend TeamBank to others is **measured** using the **Net Promoter Score**. The Net Promoter Score is ascertained over the telephone at 3 points in the customer relationship: after the contract has been signed, after 18 months, and after the contract ends. **Measurement based on the brand performance monitor** is carried out at least once a year as a way of increasing the appeal of the product brands over the long term. The findings are evaluated and the resulting input is used by TeamBank as the basis for optimizing the brand strategy. **Measurement using AdTrek** takes place monthly in order to gauge brand perception and raise brand recognition in the long term.

**Accessibility actions** in accordance with the European Accessibility Act (EAA) require all digital applications to be made accessible by June 28, 2025. All applications that are relevant to end-customers are checked for compliance with accessibility requirements in collaboration with accessibility experts. Audits are used in this process. Based on these checks, lists of specific requirements are drawn up that must be implemented by the deadline. These requirements are added to the writing guidelines and design system and then made available to all teams to ensure that no customer groups are discriminated against. The new **writing guidelines** provide support for day-to-day communications with end-customers, ensuring that communications are consistent and aligned with the brand. From the perspective of TeamBank, this creates a positive and consistent customer experience.

#### Processes and channels for engaging with consumer finance borrowers

In addition to the actions for measuring the NPS and the mechanism for the complaints process, TeamBank also involves consumers and end-users in the product development process. As part of this, changes to products and services are tested for aspects such as whether they are a good fit with customers' needs and whether they offer any benefits to customers.

In relation to consumer finance borrowers, the DZ BANK Group does not have any processes in place for engaging with consumers and end-users with regard to impacts. No standardized process has been established as a way of assessing whether customers are aware of and sufficiently trust the structures and processes for expressing their concerns and needs.

#### Metrics relating to consumer finance borrowers

There were no cases of non-respect of the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, or the OECD Guidelines for Multinational Enterprises that involved consumer finance borrowers that were consumers and end-users during the reporting period.

This chapter looks at interactions with consumers and relates – within the sections about real estate finance borrowers at DZ HYP – to business with retail customers.

#### Targets relating to real estate finance borrowers

No measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to real estate finance borrowers.

#### Policies relating to real estate finance borrowers

From its perspective, DZ HYP ensures that its customers' personal data is protected and only used for the intended purpose. In doing so, it addresses the risk of damaging customers' confidence in DZ HYP that could result from inadequate data protection. The basis for this is provided by the internal data protection policy, which applies to all employees of the bank. Data protection requirements play a material role in DZ HYP's internal projects for digitalizing its customer interfaces. DZ HYP aims to meet its customers' expectations in terms of improved process quality, greater efficiency, and speed with the highest standards of data protection and data security. Implementation of and responsibility for the policy falls within the remit of the Compliance division and the relevant head of division.

This policy is directly linked to the material topic of consumers and end-users, plus the related IROs.

#### Actions relating to real estate finance borrowers

From its perspective, DZ HYP aims to do everything it can to **prevent its customers from taking on excessive debt**. It does so by taking an appropriate and measured approach to lending. When entering into real estate finance business with retail customers, it focuses on the mortgageable values that can be achieved over the long term for the properties to be financed or used as security and it carefully examines aspects such as the customer's overall assets and liabilities and their long-term capacity to service their debts. It also reviews customers' assets and long-term capacity to service their debt in accordance with the rules in the Mortgage Credit Directive.

While upholding the principle of subsidiarity vis-à-vis the local cooperative banks, DZ HYP endeavors to **open up** new and additional **channels** for reaching retail customers in order to facilitate access to the bank's financing products and steadily increase the volume of lending to customers. In new business, DZ HYP offers a sustainable loan with a lower interest rate for properties in a very good energy efficiency class and/or with low final energy consumption. Development lending programs from Germany's KfW development bank – 'Climate-friendly new construction – residential buildings', 'Efficiency House modernization', 'Home ownership

for families', and 'Young buys old' – have been integrated into the sales channels. In doing so, DZ HYP is supporting efforts to create more sustainable housing. In 2024, the bank established a green loan product in this context, developing an eco-loan for retail customers that offers an attractive reduced interest rate for owner-occupied properties with final energy consumption of no more than 50 kWh / m<sup>2</sup>. Marketing of this product feature from the VR-Baufi home finance product family began in 2024. The resources for implementing these actions were not quantified in the reporting period.

#### Processes and channels relating to real estate finance borrowers

DZ HYP is a member of many different trade associations. It participates in initiatives to stabilize the financial system, uphold the interests of the Pfandbrief banks, and promote the economic interests and ideals of the real estate industry as a whole.

In retail customer business, the intermediary banks check creditworthiness in accordance with the requirements specified by DZ HYP. By taking an appropriate and measured approach to lending, DZ HYP prevents its customers from taking on excessive debt. It also reviews customers' assets and long-term capacity to service their debt in accordance with the rules in the Mortgage Credit Directive.

So far, no standardized process has been established as a way of assessing whether customers are aware of and sufficiently trust the structures and processes for expressing their concerns and needs.

Where there is cause for complaint, customers can access DZ HYP's complaints management system using the central address for complaints provided on the website. If the Compliance division receives a complaint relating to retail customer business, it forwards the complaint directly to the Retail Customer Sales (PVB) department, which handles the complaint through to closure of the case.

#### Metrics relating to real estate finance borrowers

There were no cases of non-respect of the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, or the OECD Guidelines for Multinational Enterprises that involved real estate finance borrowers that were consumers and end-users during the reporting period.

### 3.5.4 Home savings customers

#### Targets relating to home savings customers

No measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to home savings customers.

#### Policies relating to home savings customers

The data protection standards of BSH reflect the data protection principles enshrined in article 5 of the **General Data Protection Regulation** (GDPR): lawfulness, fairness, and transparency; purpose limitation; data minimization; accuracy; storage limitation; integrity and confidentiality.

These policies are directly linked to the material topic of consumers and end-users, plus the related IROs.

#### Actions relating to home savings customers

A data protection officer pursuant to article 37 GDPR has been appointed in order to implement GDPR.

BSH performs **intelligent data analysis** and links data to information from its customer database and to information provided by customers (e.g. energy performance certificates). The objective is to maintain a firm fo-

cus on customer requirements and to offer bespoke information, products, and services. This includes information about advantages and disadvantages that customers may face in connection with statutory requirements, opportunities for government subsidies, energy efficiency measures and renovations resulting in a higher property value, and energy cost savings.

#### Processes and channels relating to home savings customers

BSH uses continual, process-related **customer experience measurements** at 10 touchpoints in order to obtain feedback. These measurements generated more than 27,000 lots of feedback in 2023. The feedback is used, for example, to calculate the Net Promoter Score, which determines part of employees' performance-based remuneration. Separately from touchpoint-based feedback, customer satisfaction is measured in comparison with that of competitors by carrying out around 2,000 interviews per year. Direct feedback is also obtained during discussions with home experts in the field sales force and with employees in the customer dialogue center. Customer complaints are systematically recorded and processed. Monitoring of comments on social media and the consideration of the indirect views of consumers, as expressed through consumer organizations and consumer portals, enables external input from consumers and end-users to be noted and incorporated into the service process on an ongoing basis. The term 'service process' refers to the process of creating an offering that can be sold on the market and meets customer needs. The offering includes a service as the solution to a customer problem – for example a finance product with specific conditions – as well as advice, other services, or a specific process (e.g. loan application, allocation) that indirectly helps to solve the customer's problem.

BSH maintains a close dialogue with customers in order to understand their needs. As well as **talking to them in person**, it uses **regular surveys**, ad hoc consumer surveys for optimizing specific aspects of its performance and communications, and temporary customer communities and focus groups for this purpose. For example, the involvement of consumers and end-users is a mandatory element of the new product development process. Sales employees, who have direct experience of customers, contribute to the design of processes, products and offers. In addition to the business-to-customer (B2C) customer satisfaction surveys, regular surveys among its sales channels (the field sales force and cooperative partner banks) are conducted. Once a year, a sales climate index (VKI) is compiled for the field sales force to provide an evaluation of material sales-relevant parameters. The most recent collaboration survey among the members of the Boards of Managing Directors and managers at cooperative partner banks was conducted in 2023. As is fitting for a customer-focused company, the Board of Managing Directors is responsible for involving consumers and end-users and receives crucial support from the Market and Sales division.

Complaints are viewed as a critical process that provides an important opportunity to bring about improvements. **Handling complaints** in the right way can help to boost customer satisfaction in the long term. A sensitive approach is taken to complaints as it is not always immediately obviously in an individual case whether it is a complaint. The focus is always on the customer's perspective. Letters from customers must be analyzed carefully and thoughtfully to make sure that the customer's concern is fully understood. From the perspective of the Schwäbisch Hall Group, key details can often be found by reading between the lines, thereby providing background information for the complaint. To gain a full understanding, the Schwäbisch Hall Group studies the factors that motivated the customer to make a complaint. It looks at what actually triggered the complaint and what specific reasons prompted the customer to contact the company. The customer's personal needs are also analyzed as they play a crucial role in finding a suitable solution. Customers' complaints must be investigated. The aim is for all employees to have a consistent understanding of how to recognize complaints.

A complaint can be submitted via any of the usual contact channels, whether orally or in writing, and either directly by the complainant or by a person authorized to represent them.

Beyond this, no standardized process has been established as a way of assessing whether customers are aware of and sufficiently trust the structures and processes for expressing their concerns and needs.

#### Metrics relating to home savings customers

There were no cases of non-respect of the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, or the OECD Guidelines for Multinational Enterprises that involved home savings customers that were consumers and end-users during the reporting period.

## 4 Governance

### 4.1 Management of material impacts, risks, and opportunities in the governance sphere (SBM-3)

The DZ BANK Group believes that it can have a positive impact on governance matters by maintaining long-term, successful business relationships founded on **good corporate governance and a strong corporate culture**. One of the contributing factors is support for the identification of non-compliant conduct, which is achieved by offering protection for whistleblowers. By acting with integrity, the DZ BANK Group can position itself as a reliable and transparent business partner (see chapter VII.0).

In collaboration with business partners, the DZ BANK Group can provide incentives for the **avoidance of corruption and bribery (compliance)** and can tackle general financial criminality. The potential causes of corporate governance risk include governance structures that are inadequate or lack transparency. The DZ BANK Group has put policies in place, such as the group governance policy and the code of conduct, to minimize this risk. It also tackles this risk by having a risk management system that encompasses sustainability risk. A lack of an, or only an inadequate, action plan to tackle money laundering, the financing of terrorism, and all forms of corruption (acceptance of advantages, granting of advantages, active bribery, and passive corruption) can also lead to corporate governance risk. Such risk may damage the DZ BANK Group entities' reputation among employees, customers, and business partners. The DZ BANK Group has therefore taken appropriate action for preventing corruption based on a compliance management system that includes compliance policies and an annual risk analysis (see chapter VII.4.3).

The lending process is designed to ensure that transactions with customers that do not satisfy the minimum corporate governance requirements defined by the DZ BANK Group are prohibited. Checks for critical governance matters, such as in the anti-corruption and competition/tax categories, are conducted and evaluated in a standardized manner.

Regarding **supplier relationships and payment practices**, the DZ BANK Group counters the risk of damage to stakeholders' trust in group entities due to poor stakeholder management. It does this by, for example, imposing groupwide minimum requirements regarding sustainable supplier management. Risks in the supply chain could also have an adverse impact on the environment and society as well as jeopardize supplier relationships. When selecting service providers and suppliers and when purchasing goods and services, the entities in the DZ BANK Group therefore consider not only criteria such as quality and price but also sustainability criteria (see chapter VII.4.4).

While DZ BANK is not directly involved in **political engagement** in the form of lobbying, it is through its memberships in trade associations and federations. DZ BANK's activities in this area and its memberships are declared in an entry in the lobbying register of the Bundestag (first chamber of the German parliament) and can be viewed by employees, the public, and other stakeholders of the bank (see chapter VII.4.5).

As part of the business environment analyses, risk factors relevant to governance were analyzed and their impacts on the business model of each management unit were assessed. This primarily identified potential short- to medium-term operational and reputational risks that could arise from opaque disclosure processes or a lack of internal control mechanisms with an internal control system and an internal audit function. These could potentially have a negative impact (low to medium effect) on the DZ BANK Group's business model. Good corporate governance – based on integrity and resulting in few incidents of corruption and bribery – gives rise to opportunities, for example to position the group as a reliable and transparent business partner. Advocacy within the parameters permitted by law, for example in trade associations, can improve business opportunities.

The material impacts, risks, and opportunities identified in the materiality assessment in relation to corporate governance are presented in the table below.

FIG. VII.33: OVERVIEW OF THE IMPACTS, RISKS, AND OPPORTUNITIES IN THE CORPORATE GOVERNANCE SPHERE

| Topics of the materiality assessment     | Standard | Dimension          | IRO type        | Impacts, risks, and opportunities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Chapter in the report                                                                                                         |
|------------------------------------------|----------|--------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Business practices and corporate culture | G1       | Own operations     | Positive impact | Improving corporate culture and long-term stability through support for the identification of non-compliant conduct, which is achieved by offering protection for whistleblowers                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Chapter VII.4.3 Compliance                                                                                                    |
|                                          |          |                    | Risk            | Own operations-related reputational risk: Damage to stakeholders' trust in DZ BANK Group entities due to a poor remuneration policy, a unilateral ownership structure, questionable corporate values & guidelines, opaque disclosure processes, a deficient internal control & risk management system, and a lack of effective control and oversight activities in the committees. For example, the general public, the media, and/or employees could criticize the inadequacies – whether subjective or not – of the institution's remuneration practices. The general public and the media could also criticize the inaccurate/misleading disclosures of the institution, and the way that it portrays itself, with regard to ESG (greenwashing). | Chapter VII.0 Corporate governance and corporate culture<br>Chapter VII.4.3 Compliance                                        |

|                                                            |          |                    |                 |                                                                                                                                                                                                                                                  |                                                                                                 |

## 4.2 Corporate governance and corporate culture (G1-1)

### Brief summary

- Reporting of targets, policies, and actions relating to corporate governance and culture in own operations and the business portfolio
- Disclosure of governance instruments, such as the group governance policy and the UN Global Compact, and their management using the compliance management system

### Targets relating to corporate governance and corporate culture

No measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to corporate governance.

### Policies relating to corporate governance and corporate culture

The fundamental framework for the management and monitoring of the DZ BANK Group's management units is set out in the **group governance policy (GGP)**, which contains standards for good and responsible corporate governance and group management. The GGP is implemented by the GRFC (see chapter VII.4.3) and, among other things, ensures legally compliant actions – as described in the DZ BANK Group's code of conduct – and a functioning system of risk management that includes sustainability risks. The policy includes the obligation of the Board of Managing Directors and Supervisory Board to ensure the continued existence of DZ BANK, the DZ BANK Group, and the Cooperative Financial Network as going concerns through long-term value creation in accordance with the provisions of company law and regulatory requirements. The GGP is aimed at ensuring the management and supervision of the DZ BANK Group by the Board of Managing Directors and Supervisory Board.

By signing up to the UN Global Compact, the DZ BANK Group has voluntarily undertaken to respect and comply with the 10 principles of corporate responsibility within its sphere of influence. This includes respecting human rights and taking decisive action against corruption in all its forms, such as extortion, bribery, and passive corruption. The DZ BANK Group's **code of conduct** is based on the principles of the UN Global Compact. It also addresses undesirable business practices and makes reference to various tools for preventing fraud and respecting human rights. The Compliance division ensures and is responsible for the implementation of the code of conduct by all employees. The Board of Managing Directors bears overall responsibility for the policy.

These policies are directly linked to the material topic of business practices and corporate culture, plus the related IROs.

### Actions relating to corporate governance and corporate culture

The DZ BANK Group has established a groupwide **compliance management** system and documented it in writing as part of its compliance framework. Compliance management includes, in particular, policies containing anti-corruption rules, training of employees, and annual risk analyses, but also monitoring processes. The aim of this approach is to prevent incidents of corruption and breaches of statutory and regulatory requirements (see chapter VII.4.3).

DZ BANK has set up a **whistleblowing system** with the aim of ensuring that incidents related to its business conduct, including cases of corruption and bribery, are investigated promptly, independently, and objectively. This includes incidents concerning employees and those concerning the Board of Managing Directors or Supervisory Board. All incidents are processed using a standardized procedure (see chapter VII.4.3). The employees who manage the whistleblowing system must attend relevant training every 2 years.

DZ BANK's **Board of Managing Directors** and **Supervisory Board** attend **induction sessions and regular training sessions** on the corporate values and on responsible leadership to ensure that the values embodied by the corporate culture are firmly anchored in the organization. The purpose of the induction and training

sessions is to give the members of the Board of Managing Directors and Supervisory Board an understanding of the DZ BANK Group's structure, business model, risk profile, and governance rules. Furthermore, they are designed to give the members a deeper understanding of their roles and the related functions. To this end, DZ BANK provides general and, where required, specific training programs for the relevant members. All of DZ BANK's induction and training sessions aim to help the members of the governing bodies to perform their roles and functions (see chapter VII.3.2.2).

The DZ BANK Group views **social and cultural projects**, such as financial support for local communities, as part of its corporate culture (see chapter VII.3.4).

#### Processes relating to corporate governance and corporate culture

The DZ BANK Group actively involves its own workforce in corporate governance and in shaping the corporate culture, primarily by conducting employee surveys. **Surveys of employees** help to ascertain their expectations and needs, identify areas of action, and initiate necessary changes (see chapter VII.3.2.4).

### 4.3 Compliance (G1-3, G1-4)

#### Brief summary

- Reporting of targets, policies, actions, and metrics relating to compliance in own operations and in the business portfolio
- Disclosure of information on training aimed at preventing and detecting corruption and bribery
- Details of transparency in respect of incidents of corruption and bribery

Ensuring legally compliant conduct is essential to responsible corporate governance in the DZ BANK Group. Effective compliance management is a prerequisite for good business practice. It includes preventing financial criminality (preventing money laundering, corruption, bribery, and the financing of terrorism), preventing market manipulation and insider trading, and ensuring compliance with sanctions and embargoes. Compliance management is therefore crucial to the integrity of the financial system and underpins both economic growth and social stability. The disclosures in this chapter in respect of group entities generally relate to the DZ BANK Group entities that are considered part of the scope of consolidation for compliance purposes. This encompasses the management units of the DZ BANK Group, plus Reisebank, VR Equitypartner, VR Factoring GmbH, VR Payment, and GENO Broker GmbH.

#### Targets relating to compliance

No measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to corruption and bribery or to training on preventing and detecting corruption and bribery.

One of TeamBank's ongoing targets is to ensure, as at the reporting date in the calendar year, that 100.0 percent of employees take part in courses on the prevention of other criminal offenses and pass the web-based training (WBT). Target achievement is measured by the number of employees completing the training each year as a proportion of the total workforce. The outstanding WBTs are checked each year to determine whether the target has been reached.

#### Policies relating to compliance

The **compliance framework** was established as a means of ensuring that the DZ BANK Group satisfies the statutory and regulatory requirements. The compliance framework of the DZ BANK Group comprises a compliance policy and compliance standards. The compliance policy sets out requirements for establishing and organizing the compliance functions and details of their duties. The compliance standards implement these requirements within the group's own operations, along with the guidelines on managing conflicts of interest.

The standards on preventing money laundering and the financing of terrorism, on accepting and granting benefits, and – applicable in the banking group – on preventing other criminal offenses also form part of the compliance framework. The Compliance division ensures and is responsible for the implementation of the compliance framework. The Board of Managing Directors bears overall responsibility for the policy.

Most parts of the DZ BANK Group are obliged to submit a **Foreign Account Tax Compliance Act (FATCA)** report because they are registered with the US tax authority (the Internal Revenue Service, IRS), as financial institutions subject to reporting requirements and have therefore been issued with a Global Intermediary Identification Number (GIIN). DZ BANK and DZ PRIVATBANK are also covered by the US **Qualified Intermediary (QI)** agreement.

At DZ BANK and DZ PRIVATBANK, the rules for **handling conflicts of interest** are set out in a dedicated policy. DZ BANK is required to inform customers of potential unavoidable conflicts of interest and inducements, for example in cases where the supply of financial analyses coincides with the provision of banking services. It is the job of capital market compliance to monitor whether conflicts of interest in connection with investment services and ancillary investment services are being avoided and whether unavoidable conflicts of interest are being adequately addressed. This particularly applies in regard to protecting customers' interests.

These policies are directly linked to the material topic of bribery and corruption, plus the related IROs.

#### Measures relating to compliance

All entities in the DZ BANK Group that are required by law or regulation to establish a **compliance function** have done so, in accordance with the group's compliance policy. The compliance function is responsible for mitigating risks that could arise from non-compliance with legal provisions and requirements. The role of the compliance function is to ensure the implementation of effective procedures for compliance with the legal provisions and requirements that are material to the entities, along with the relevant controls. The compliance function is also responsible for supporting and advising the senior management on compliance with these legal provisions and requirements. Its primary remit is to identify those material legal provisions and requirements that, if not complied with, might put the entities' assets at risk. This process is carried out on an ongoing basis, taking risk perspectives into consideration.

Under the compliance framework, **corporate compliance** at DZ BANK is responsible for all aspects of compliance governance at the level of the DZ BANK Group. It advises the group entities with regard to the implementation of these requirements and monitors adherence to the compliance framework.

Once per year, and also on an ad hoc basis as required, DZ BANK's **Compliance division submits a report** to the Board of Managing Directors and the Audit Committee on the activities of the compliance functions of DZ BANK and the group entities and describes any material insights they have gained. Furthermore, the safeguards put in place at DZ BANK in accordance with the compliance standards (particularly in relation to the prevention of money laundering, financing of terrorism, and other criminal offenses) and the guidelines on managing conflicts of interest are subject to continual review and refinement.

At DZ BANK, the **Compliance division** ensures that effective procedures for complying with the legal provisions and requirements that are material to the bank are implemented and the relevant controls are carried out. The areas of responsibility of the Compliance division include the prevention of financial criminality (the division is the central point of contact in this regard), capital market compliance and corporate compliance, and the MaRisk compliance function. In accordance with the compliance framework, the ombudsperson (see chapter VII.3.2.3), the data protection officer and her staff, the responsible officer, the officer for the protection of customers' financial instruments, and the human rights officer are also part of the Compliance division. Other monitoring functions are assigned to other areas of the organizational structure, such as information security.

The remit of **capital market compliance** at DZ BANK includes carrying out regular risk-based monitoring to ensure that the principles and processes put in place in connection with investment services are followed. It also ensures that the employees in the divisions performing such services are sufficiently aware of compliance risk. Capital market compliance also monitors and evaluates the principles and processes put in place in the company, along with the action taken to rectify shortcomings, including the processes for handling complaints.

In the context of **preventing financial criminality** at DZ BANK, safeguards are developed and implemented with regard to money laundering, the financing of terrorism, and other criminal offenses. To this end, DZ BANK has set up a central point of contact – part of the Compliance division – for the prevention of money laundering, the financing of terrorism, and other criminal offenses in accordance with section 25h KWG. Regular training for all employees is a key aspect of the safeguards that DZ BANK has put in place. All DZ BANK sites in Germany and abroad and the DZ BANK Group entities are included in the annual risk analysis aimed at preventing money laundering, the financing of terrorism, and other criminal offenses. This risk analysis is required by law.

Within the compliance framework, the **MaRisk compliance function** is responsible for monitoring legal standards on a continual basis in most of the banking group's entities and conducts the MaRisk compliance risk analysis. The Regulatory Workflow Center system is used to monitor legal standards. In the regulatory banking group, the 'Central inventory of laws and regulations' standard constitutes the groupwide rules and an ongoing action in this context and forms part of the compliance framework.

In accordance with the compliance framework, each Head of Division, Head of Area of Board Responsibility, and Head of Business Segment has appointed a fraud prevention coordinator tasked with implementing actions to prevent other criminal offenses at DZ BANK. This person ensures, in collaboration with the Compliance division, that the necessary actions are integrated into work processes effectively and on an ongoing basis, and are being applied. At DZ BANK, the **processes for accepting customers** and updating customer data on an ongoing basis are documented in a written set of procedural rules in accordance with the statutory and regulatory requirements. A risk-based approach ensures that all necessary data and information about the bank's customers is collected. This also includes checks to identify politically exposed persons (PEPs) and checks against sanction and embargo lists.

On an ongoing basis, **training courses** are offered on specific topics such as investment advice to implement the policy for handling conflicts of interest. Compliance also works with a software program that examines relevant trades for market manipulation. Moreover, a multi-level process within DZ BANK is designed to ensure that employees adhere to the statutory requirements aimed at preventing insider trading. As DZ BANK carries out payments processing, it conducts electronic transaction monitoring in order to check transactions for indications of money laundering or the financing of terrorism. It reports any suspicious transactions to Germany's central agency for analyzing financial transactions, the Financial Intelligence Unit (FIU).

Various training courses are also carried out in the DZ BANK Group to ensure implementation of the compliance framework.

Because all employees and the senior management are equally at risk of exposure to corruption and bribery, **compliance training** on the detection and prevention of corruption and bribery are mandatory for these at-risk groups of people in the DZ BANK Group. The training programs on anti-corruption and bribery matters include courses that cover the avoidance of acts of corruption.

DZ BANK provides regular training for its at-risk persons on compliance, the prevention of money laundering and the financing of terrorism, financial sanctions and embargoes, fraud prevention, GDPR, and the prevention of market manipulation. Web-based programs are used for this training and include a mandatory test at the end. Employees must complete these programs soon after joining the organization and subsequently repeat them every 2 years. The Compliance division checks that employees and senior management take the

compliance training, issuing reminders where this is not the case. Line managers and the deputy anti-money laundering officer are involved in the reminder process for the particular training courses. The DZ BANK compliance officer also ensures that relevant topics are covered in the training provided to the Supervisory Board.

BSH provides regular training on compliance for at-risk persons. The training includes modules on the principles of compliance, conflicts of interest, gifts and hospitality, fraud, antitrust law, and due diligence in the supply chain. Each module ends with a test. Training is also provided on anti-trust law and money laundering for a defined group of people. The courses must be completed annually.

New employees at DZ HYP must complete certain training programs. They include courses on fraud prevention, the prevention of money laundering and the financing of terrorism, and sanctions and embargoes (only for market-facing functions such as customer service and loan processing). These courses must be completed every 2 years.

DZ PRIVATBANK runs regular training courses on financial sanctions and embargoes, the prevention of money laundering and terrorism financing, fraud prevention, data protection, and the prevention of market abuse. As a minimum, these courses must be completed every 2 years.

Reisebank provides regular training on compliance and money laundering prevention for at-risk persons. Awareness training in connection with financial transactions is mandatory and must be completed every 2 years.

R+V requires at-risk individuals to complete the compliance training program, which also covers anti-corruption and bribery regulations. Employees can also access a web-based compliance training program, and the compliance units provide additional risk-related training modules. All at-risk functions must complete the training documents at intervals of no more than 3 years via an acknowledgment procedure or the web-based training program. This is monitored by the corporate compliance unit.

TeamBank provides training for at-risk individuals on compliance, the prevention of money laundering and terrorism financing, financial sanctions and embargoes, fraud prevention, and GDPR. The courses must be completed annually.

UMH provides training on compliance and integrity and on the prevention of financial criminality for at-risk persons by means of web-based mandatory training. Web-based training is also available on data protection and information security. In addition, a defined group of people receives training on employee transactions, and classroom-based training is offered for specific topics such as portfolio management or the real estate segment. The training is mandatory and must be taken every year, apart from data protection training which has to be completed every 2 years.

At-risk persons at VR Equitypartner must take courses on the prevention of money laundering and the fight against terrorism (including financial sanctions and embargoes), on fraud prevention (including the prevention of corruption), and on compliance with data protection rules every 2 years. They must also undergo cybersecurity training annually.

At VR Factoring GmbH, all at-risk employees and the Managing Directors receive regular training on the prevention of money laundering, terrorism financing, and fraud, as well as on data protection, information security, and workplace health and safety. As a minimum, these courses must be completed every 2 years.

At-risk persons at VR Payment receive regular training on the following compliance-related matters: business continuity management, data protection, and money laundering. The courses must be completed annually.

At VR Smart Finanz, all at-risk individuals receive regular training on anti-corruption, export controls, and the prevention of money laundering and terrorism. The courses must be completed every 2 years.

#### Procedures relating to compliance

**Whistleblowing systems** are in place in the DZ BANK Group to allow employees and third parties to report compliance violations confidentially and without fear of reprisals (see chapter VII.3.2.6, chapter VII.3.3, chapter VII.3.4, and chapter VII.3.5). In the DZ BANK Group, the 'Whistleblowing system' standard constitutes the groupwide rules in this context and forms part of the compliance framework. One of the rules is that the group entities must notify DZ BANK of material whistleblowing cases in anonymized form.

The ombudspersons and representatives appointed in the group entities to receive reports of breaches are bound by confidentiality in order to protect the whistleblowers. At DZ BANK, the information received by the ombudsperson is passed on to a whistleblower committee in accordance with data protection requirements. The committee evaluates the information and initiates any required action, including the involvement of investigating authorities where necessary. Information about the whistleblowing system is published on DZ BANK's intranet and website. At DZ BANK, anonymized information on the cases handled in the whistleblowing system are reported to the Board of Managing Directors annually and, if required, on an ad hoc basis.

DZ BANK employees are regularly provided with information on the whistleblowing system as part of the compliance training courses.

#### Metrics relating to compliance

In 2024, there were no known convictions for breaches of corruption and bribery rules by members of governing bodies and/or employees of group entities in the DZ BANK Group. No fines were paid as a result of breaches of corruption and bribery rules in the reporting year.

Where required by law, the DZ BANK Group regularly runs mandatory compliance training courses for its employees. 96.0 percent of employees in at-risk functions had taken part in and completed training programs as at the reporting date in the reporting year. All employees in the DZ BANK Group in active employment (i.e. not suspended or inactive) can essentially be considered functions-at-risk. At most, those employees can be excluded whose role has nothing to do with the typical tasks and activities associated with the relevant group entity's business.

## 4.4 Supplier management (G1-2)

#### Brief summary

- Reporting of targets, policies, and actions relating to supplier management in own operations
- Explanation of the rules on working with suppliers, such as the sustainability in procurement guidelines and the sustainability requirements for suppliers

It is extremely important to consider sustainability in supplier management. The management units in the DZ BANK Group strive to ensure that their supply chains are environmentally and socially responsible as well as efficient and cost-effective. When selecting service providers and suppliers and when purchasing goods and services, the management units in the DZ BANK Group therefore pay careful attention not only to criteria such as quality and price but also to sustainability criteria, including the minimization of environmental and social risk. This includes adhering to environmental standards (e.g. reducing carbon emissions), promoting social responsibility (e.g. recognizing and respecting human rights), and supporting ethical business practices (e.g. preventing corruption). By taking this holistic approach, the management units in the DZ BANK Group can ensure that their supplier management is economically viable, sustainable, and responsible.

#### Targets relating to supplier management

To date, no measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to supplier management.

UMH<sup>29</sup> is planning to gradually increase the proportion of suppliers with an **EcoVadis rating to 90 percent** by the end of **2026**. This target is not related to environmental aspects. No stakeholders were involved in setting the target for the sustainability matter. The target is reviewed annually and quarterly in the quarterly purchasing report, and shared with the Executive Committee every six months.

#### Policies relating to supplier management

The common general guidelines and the processes for the sustainable management of supply chains are defined in the **sustainability in procurement guidelines** for most of the entities in the DZ BANK Group. These guidelines also cover selecting and procuring sustainable products and services as well as helping suppliers to improve in terms of their sustainability-related activities. The sustainability in procurement guidelines were drawn up at group level by the working group for sustainability in procurement. The working group has been tasked with continually refining the sustainability processes and objectives in procurement, and updating the guidelines on an ongoing basis. The procurement departments of the group entities are responsible for implementing the guidelines. Each entity's procurement function is required to follow the guidelines.

Group entity-specific application of the sustainability in procurement guidelines is designed to ensure that the procurement processes in the DZ BANK Group comply with economic, environmental, and social standards, including aspects relating to human rights and fair working practices. The guidelines are embedded and implemented differently in supplier management (non-transaction-specific) and procurement management (transaction-specific).

The defined guidelines take account of legal requirements arising from LkSG and other official publications, chiefly the principles of the UN Global Compact (covering the areas of human rights, labor standards, the environment, and anti-corruption), the pertinent conventions of the International Labour Organization (ILO fundamental conventions), and guidance published by supervisory authorities in order to provide more detail on aspects relevant to sustainability risk, such as the guidance published by the Bundesamt für Wirtschaft und Ausfuhrkontrolle (BAFA) [German Federal Office for Economic Affairs and Export Control] on performing a risk analysis in accordance with the provisions of LkSG (see chapter VII.3.2.5, chapter VII.3.2.6, and chapter VII.3.3).

The group entities require their suppliers to comply with minimum standards as specified in the **contractual sustainability requirements for suppliers** to the DZ BANK Group. These requirements are aligned with sources such as the principles of the UN Global Compact (covering the areas of human rights, labor standards, the environment, and anti-corruption), the code of conduct issued by the Bundesverband Materialwirtschaft, Einkauf und Logistik e.V. (BME) [German Association for Supply Chain Management, Procurement and Logistics], the pertinent ILO fundamental conventions, and the requirements in LkSG. The requirements form part of the business relationship because they take account of the supplier's environmental (e.g. minimizing the impact on the environment), social (e.g. ensuring occupational health and safety), and economic (e.g. complying with legal requirements and maintaining free competition) responsibilities along the supply chain.

The common objective of the management units in the DZ BANK Group in connection with the sustainability requirements for suppliers is to take account of sustainability criteria such as certification when selecting suppliers. The sustainability requirements for suppliers are applied on a group entity-specific basis. The management units of the DZ BANK Group view the requirements as important guidance for the individual business relationship. If a firm is unwilling to sign up to the sustainability requirements for suppliers, an escalation pathway is initiated and a decision is made on whether the requirements are material to the business relationship in the specific case (see chapter VII.3.2.1 and chapter VII 4.3).

The contractual sustainability requirements for suppliers were developed at group level by the sustainability working group. The procurement departments of each group entity are responsible for monitoring compliance

<sup>29</sup> The details concerning UMH in the supplier management chapter do not apply to the special funds or to VisualVest, Quoniam, or the ZBI Group.

with the policy. The line managers within the procurement departments are responsible for implementing the contractual sustainability requirements.

These policies are directly linked to the material topic of supplier relationships and payment practices, plus the related IROs.

#### Actions relating to supplier management

The **working group for sustainability in procurement** was created to implement the sustainability in procurement guidelines and the contractual sustainability requirements. It comprises the sustainability coordinators of the procurement departments in most entities in the DZ BANK Group. The working group meets each month.

To ensure the management units of the DZ BANK Group take a consistent approach, the working group for sustainability in procurement has developed a **minimum standard** for assessing the sustainability performance of suppliers, which includes a multi-stage escalation process that can ultimately result in a supplier being excluded.

Taking account of the classification of suppliers based on sustainability risk, the following are carried out annually in most entities in the DZ BANK Group:

- A tool-based analysis of the supplier portfolio by country and sector
- A more in-depth tool-based rating for relevant suppliers (examination of the following categories: environmental impacts, labor rights and human rights, ethics, and sustainable procurement)
- A supplier management meeting for addressing sustainability-relevant aspects

The actions agreed with the supplier are based on the score from the **risk analysis** and on the evaluation of the sustainability management status quo, including progress made and any changes planned. If the procured goods/services or any anomalies indicate that a supplier needs to be investigated more thoroughly, various courses of action are possible, such as an audit. The risk analysis in the supply chain is based on LkSG and is an ongoing action that builds on the sustainability in procurement guidelines. The risk analysis is conducted at least once a year and updated accordingly.

DZ BANK, BSH, UMH, and VR Smart Finanz hold **annual development meetings** with suppliers and service providers that have been classified as sustainable. At these meetings, they discuss sustainability-related progress and actions in order to assess whether any targeted steps need to be initiated to promote further development. Other group entities plan to gradually introduce such meetings. The purpose of the ongoing action of development meetings is to implement the sustainability in procurement guidelines and the contractual sustainability requirements.

The self-assessment tool selected for use by suppliers is **EcoVadis**, and it is now used in most DZ BANK Group entities. EcoVadis provides a collaborative platform on which to carry out sustainability assessments. Use of the EcoVadis tool is an ongoing action intended to implement the sustainability in procurement guidelines.

Invitations to undergo the **EcoVadis rating process** should be targeted primarily at suppliers requiring more in-depth analysis. If suppliers do not require an EcoVadis rating according to the minimum requirements matrix, or if a sustainability assessment is required for an invitation to tender but no EcoVadis rating is available, a questionnaire for DZ BANK Group suppliers can be used as an alternative.

All procurement transactions at DZ BANK should be carried out in accordance with the **payment terms and conditions agreed** with the supplier. The payment period is 30 days. The entire invoice processing process is designed so that suppliers are paid on time. The process is specified in process models for accounting and for the functional departments. Invoices must be approved by the departments before they can be entered in the

system. The invoice recipients (departments) receive regular reminders, both automated and manually generated by email. Once an invoice has been approved by the department, it is generally posted on the following day. The payment run is started the day after that (every day). This pays all due invoices, which ensures that payment dates are adhered to.

**Sustainability-oriented procurement** helps to reduce the consumption of materials and energy and to avoid and minimize emissions and waste. The first step in this process is to monitor actual requirements. When selecting products or services, the procurement team and the department work together to minimize resource consumption and environmental impact.

Other sustainability-relevant attributes, such as product design, quality, and energy consumption are also taken into account.

The individual procurement departments have worked together to develop a **training format** aimed at implementing the guidelines in procurement and promoting and ensuring a common understanding of sustainability in procurement. This is used in most entities in the DZ BANK Group and takes place at least once a year. The stated aim of this format is to convey basic knowledge on sustainable procurement and supplier management, which includes explaining the importance of human rights and environmental standards in the supply chain. The training sets out general parameters, practical approaches, and methods for sustainability within supplier management in order to help the target group – purchasers in the DZ BANK Group – to identify and deal with potential risks at an early stage. The requirements of LkSG form a key part of the training format. Participants learn about companies' legal obligations in relation to respecting human rights and protecting the environment in the supply chain and how these obligations can be fulfilled in practice. The focus of the training in this regard is on identifying, evaluating, and minimizing risks, on documentation, on reporting obligations, and on working with the human rights officers in the group entities.

Each group entity began holding the training course in the reporting year, taking their own specific needs into consideration.

#### 4.5 Political engagement (G1-5)

##### Brief summary

- Reporting of targets, policies, actions, and metrics relating to political engagement in own operations
- Details of the entry in the German lobbying register and membership of associations and advocacy organizations

##### Targets relating to political engagement

To date, no measurable, outcome-oriented targets have been implemented in the DZ BANK Group for tracking the effectiveness of policies and actions related to political engagement.

##### Policies relating to political engagement

The **German Lobbying Register Act** (LobbyRG) requires all individuals, companies, and organizations who/that establish contact with the Bundestag (first chamber of the German parliament) or the German federal government in order to influence political processes, or who/that engage others to carry out such activities, to enter themselves in the Bundestag's lobbying register if their activity exceeds the materiality threshold defined in the act and if none of the exemptions in the act apply. The act also permits voluntary entries in the lobbying register.

Under LobbyRG, general disclosures have to be published in the German lobbying register, along with further information on the personnel and financial resources used for lobbying and the topics covered by the lobbying.

In accordance with LobbyRG, DZ BANK (register number R001616), R+V (register number R001814), UMH (register number R001396), DZ HYP (register number R002192), BSH (register number R001691), and Team-Bank (register number R001201) are entered in the Bundestag's lobbying register. Each entity updates its own entries on an ongoing basis and by the relevant deadlines. These entries can be viewed in the lobbying register by the public under the relevant register numbers or by using the search function.

LobbyRG requires existing register entries to be reviewed and, if necessary, updated each year. When approving updates as part of the annual review and approving any changes made on an ad hoc basis, a senior manager must check that the lobbying disclosures are complete and accurate and must sign the disclosures along with the consent form for data protection and the code of conduct. The person who performs this task on behalf of DZ BANK is the Chief Executive Officer.

When submitting their entry for the Bundestag's lobbying register, the entities in the DZ BANK Group confirm that no members of their administrative, management and supervisory bodies have held an office, membership, or function in the German federal government, Bundestag, or federal public service in the past 5 years.

The procedural instruction on publications in accordance with LobbyRG at federal and regional level contains an overview of the requirements of LobbyRG and the data DZ BANK is required to enter in the lobbying register. The instruction is intended to ensure that DZ BANK complies with the requirements of LobbyRG. The registration obligation is met by means of an annual bankwide survey carried out using the processes put in place to ensure the entry of all necessary and up-to-date information. These processes are coordinated by DZ BANK's Legal division. The entries and updates are approved by the Board of Managing Directors of DZ BANK in accordance with the processes described in the procedural instruction.

Political contributions are also documented in connection with the collation of information on the financial resources used for lobbying that has to be published in the lobbying register. Most of the group entities do not permit political contributions. This exclusion takes different forms, but in most cases is part of an overarching donations and gifts policy. The aim is to give employees clear guidelines. These guidelines are adopted either by the Board of Managing Directors, the senior management, or downstream entities.

This policy is directly linked to the material topic of anti-competitive behavior and political engagement / lobbying, plus the related IROs.

#### Actions relating to political engagement

Lobbying in the name of DZ BANK, as defined in LobbyRG, is carried out solely in the context of ad hoc and professional **discussions** between members of the Board of Managing Directors and the persons named in section 1 (1) and (2) LobbyRG on general topics relating to the financial sector. Within the DZ BANK Group, the granularity of the lobbying carried out – particularly in terms of the specific political topic areas and legislative projects – can vary due to the entities' different business models and strategies. UMH, for example, is participating in current discussions about financial policy relating to topics such as financial markets regulation, personal pensions, sustainability, and real estate. Its lobbying activities involve meeting with political stakeholders for bilateral talks and at events, such as party conventions and conferences. It also prepares position papers and submits comments in response to consultations. Some political content is also published online (website, LinkedIn channel). R+V has entered into dialogue with other civil society advocacy organizations and policymakers. Because it is a full-service insurer that operates right across Germany, R+V is a point of contact for political decision-makers in respect of all matters relating to the insurance industry and the cooperative approach. For the purpose of lobbying, BSH holds bilateral talks, participates in and arranges events, and commissions information materials, studies, statements, expert opinions, surveys, and business cases, primarily with a focus on communicating its requests and recommendations in the areas of saving, investment, financing, and personal pensions and in relation to home ownership, housebuilding and homes, modernization, energy efficiency improvements, and the adaptation of buildings for older people. Other key topics include fi-

financial market regulation, consumer protection, climate change mitigation, and sustainability. Additional information on each entity's lobbying activities and the political interest areas and projects covered can be found in their individual entries in the lobbying register.

DZ BANK and the majority of the group entities are **members** of various associations and advocacy organizations. Depending on their business models and strategies, individual entities are also members of associations and advocacy organizations in European countries outside Germany and of European and international associations that represent the interests of cooperative banks with regard to legislation and regulation at European and international level or that promote the cooperative principle internationally. The ongoing monitoring of DZ BANK's membership of associations and advocacy organizations and the annual recording of expenditure in this connection serve to implement the requirements of LobbyRG pursuant to the relevant procedural instruction of DZ BANK on publication in accordance with LobbyRG. The full list of memberships that are relevant from a LobbyRG perspective, and the membership contributions paid, can be found in the entities' individual entries in the lobbying register.

#### Metrics relating to political engagement

In 2024, the DZ BANK Group made political financial contributions amounting to €224,710, of which €224,710 was attributable to contributions to political parties. Contributions to representatives of political parties and to persons seeking political office each accounted for €0. Germany is the main area of the DZ BANK Group's business activities. No political financial contributions outside Germany were made in the reporting period. The data collected on political financial contributions covers only contributions that, individually, exceed €1,000.

In 2024, the DZ BANK Group made in-kind contributions to the value of €0 to political parties, representatives of political parties, or persons seeking political office. The data collected on political contributions in the form of in-kind contributions covers only in-kind contributions that, individually, exceed €1,000.

1. This template contains information on loans and advances, debt securities, and equity instruments on the banking book toward financial corporations, non-financial corporations, including SMEs, households (including real estate lending, building renovation loans, and simple motor vehicle loans), and local government/local authorities (housing financing).

2. The following reporting categories for financial assets must be included: financial assets measured at amortized cost, financial assets measured at fair value through other comprehensive income, long-term equity investments in subsidiaries, joint ventures, and associates, financial assets measured at fair value through profit or loss, and financial assets not held for trading that must be measured at fair value through profit or loss, as well as real estate collateral that credit institutions acquire through repossession in exchange for canceling debts.

3. Banks with a non-EU subsidiary should provide this information separately for exposures to non-EU counterparties. Although non-EU exposures present additional challenges due to the lack of common disclosure requirements and methods, since the EU taxonomy and the NFRD disclosure obligations only apply within the EU, given the relevance of these exposures for credit institutions with non-EU subsidiaries, these institutions should disclose a separate GAR for non-EU exposures, making the best possible effort with estimates and ranges, using approximations, and explaining the assumptions, caveats and constraints.

4. With regard to motor vehicle loans, the institutions only include exposures that commenced after disclosure had started.

## 5.1.2 Explanatory notes on table 1

### The denominator of the GAR

The 'Total GAR assets' value, used in the denominator, is one of the most important reference values for calculating the GAR. 'Assets excluded from the numerator for GAR calculation (covered in the denominator)' represent the proportion of the 'Total GAR assets' that is included in the denominator for the GAR calculation but is not itself assessed for EU taxonomy alignment.

### Assets eligible to be included in the numerator

'GAR – Covered assets in both numerator and denominator' represent the proportion of the 'Total GAR assets' that is the sole subject of the assessment of EU taxonomy alignment (total in table 1, row 1, column a). However, there is an exception for 'Local government financing', with relevant finance under this item only being assessed for EU taxonomy alignment if the financing purpose is definitely known.

### Assets without impact on the GAR

'Assets not included in the calculation of GAR' are completely ignored when calculating the GAR. That includes receivables from regional governments, which must be allocated to the 'Sovereigns' item.

### Off-balance-sheet items

Only counterparties subject to CSRD have been included in the off-balance-sheet assets.

### 5.1.3 Green asset ratio – sector information (CapEx)

| 2. GAR sector information (CapEx) |                                                                                         | a                                                                   | b         | c                                                                                             | d         |
